State Highway Log

Planning Report
2014

SR 2 to SR 971

Washington State Department of Transportation
Multimodal Planning Division

January 15, 2015

Highway Log Users

Re: 2014 State Highway Log

Dear User:

The 2014 edition of the State Highway Log is available in electronic format. The electronic version is in Acrobat Reader file format. The Acrobat Reader software can be accessed from most Microsoft operating systems. If you do not have Acrobat Reader, you can download this software free of charge from the Internet at: http://www.adobe.com/acrobat/readstep.html.

The State Highway Log is divided into 7 separate data files; 1 comprehensive log and 6 regional logs. Each of these 7 files, once opened, contain indexing for highways listed in the left hand margin. By clicking on a specific highway within this indexing area, the highway log will then open for that particular highway.

The Roadway Branch of the GIS & Roadway Data Office (GRDO) is committed to provide you with quality products while staying within our budget. If you have any questions about our electronic version, please contact Lou Baker at (360) 570-2361, or bakerl@wsdot.wa.gov.

Sincerely,

Mark Finch
Manager, Transportation Data & GIS Office
Multimodal Planning Division

MBF/lb
Enclosures

I N T R O D U C T I O N

The Washington State Department of Transportation is responsible for the administration of over 7000 miles of State Highways. This involves large expenditures for planning, design, construction, and maintenance which necessitate having reliable geometric data for the entire State Highway System.

The Roadway Data Section of the Multimodal Planning Division provides roadway geometrics in several reports. These include the STATE HIGHWAY LOG, the Road Life Report, the Horizontal and Vertical Alignment Report, and the Classification Log. Portions of these and other reports can be accessed on remote terminals through the TRIPS (TRansportation Information and Planning Support) system.

The STATE HIGHWAY LOG, which is published annually from TRIPS, contains roadway data and mileage statistics for all State Highways. This information is representative of data collected through the previous year. It is designed to provide a record of current highway system information and a source for computing distances between major points. Detailed explanations of all fields are included starting on page "I-1", titled "State Highway Log Reference."

The Roadway Geometrics Section is responsible for updating and maintaining the roadway portion of the TRIPS system. The information TRIPS contains is provided by numerous WSDOT Regional, Headquarters and other sources. If you can provide us with updated information, find an error in the STATE HIGHWAY LOG or TRIPS, or have any questions regarding roadway data, please contact the GIS & Roadway Data Office at (360) 570-2361 or fax (360) 570-2400. We are continuously looking for sources to provide us with quality information.

MARK FINCH
Manager
Transportation Data & GIS Office
Multimodal Planning Division

	MAINTENANCE AREA, SECTION, SURFACE TYPE

STATE HIGHWAY LOG REFERENCE

The following information provides an overview on how the State Highway Log Planning Report is compiled; broken out in the order they appear in the headers of each page of the publication.

Washington State's Highways are defined by the following: State Route (SR) number, Related Roadway Type (RRT) and Related Roadway Qualifier (RRQ). These three descriptors uniquely identify each and every piece of the highway system in Washington State.

The SR is a road for which the State of Washington has some level of responsibility and is identified by a three-digit number (e.g., 004).

The RRT is a two-character abbreviation for a type of roadway. The following is a list of RRTs in the system. (Asterisk indicates RRT included in this publication).

AR*	Alternate Route	CD	Collector Distributor Dec
CO*	Couplet	CI	Collector Distributor Inc
FD	Frontage Road Dec	LX	Crossroad within Interchange
FI	Frontage Road Inc	P1 - P9	Off Ramp, Inc
FS	Ferry Ship (Boat)	Q1 - Q9	On Ramp, Inc
FT	Ferry Terminal	R1 - R9	Off Ramp, Dec
PR	Proposed Route	S1 - S9	On Ramp, Dec
RL*	Reversible Lane	HD*	Grade-Separated HOV-Dec
SP*	Spur	HI*	Grade-Separated HOV-Inc
TB	Transitional Turnback	ML*	Mainline (Implied RRT—field is blank)
TR	Temporary Route	UC	Under Construction

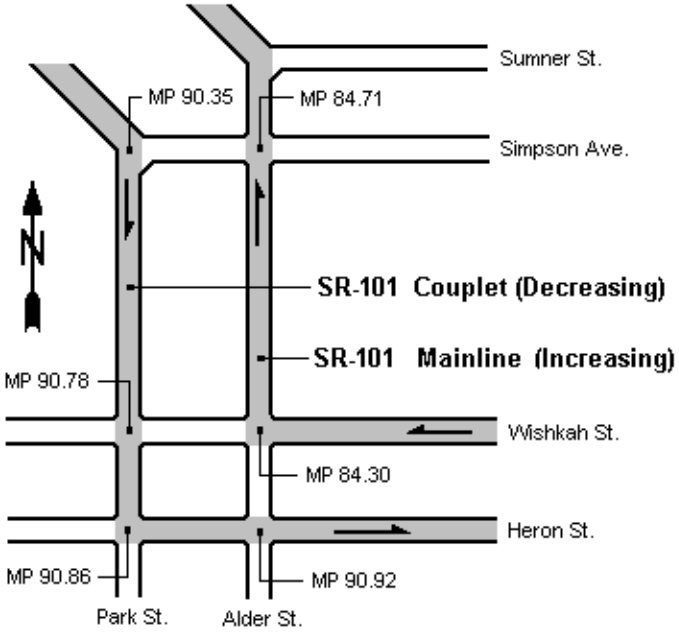
The RRQ is a maximum six-character field that uniquely identifies the RRT since there may be more than one of the same types of RRT for a route. The assigning of RRQ is done in one of three ways depending on the RRT.

1) The following RRTs use descriptive location names (i.e., city, street, or junction) for the RRQ and the begin SRMP of that RRT is relative to the Mainline SRMP where the RRT intersects with the Mainline.

AR	**Alternate Route	SP	Spur
CO	Couplet	TB	Transitional Turnback
PR	Proposed Route	TR	Temporary Route
RL	Reversible Lane		

** Alternate Route contains no RRQ

COUPLET EXAMPLE

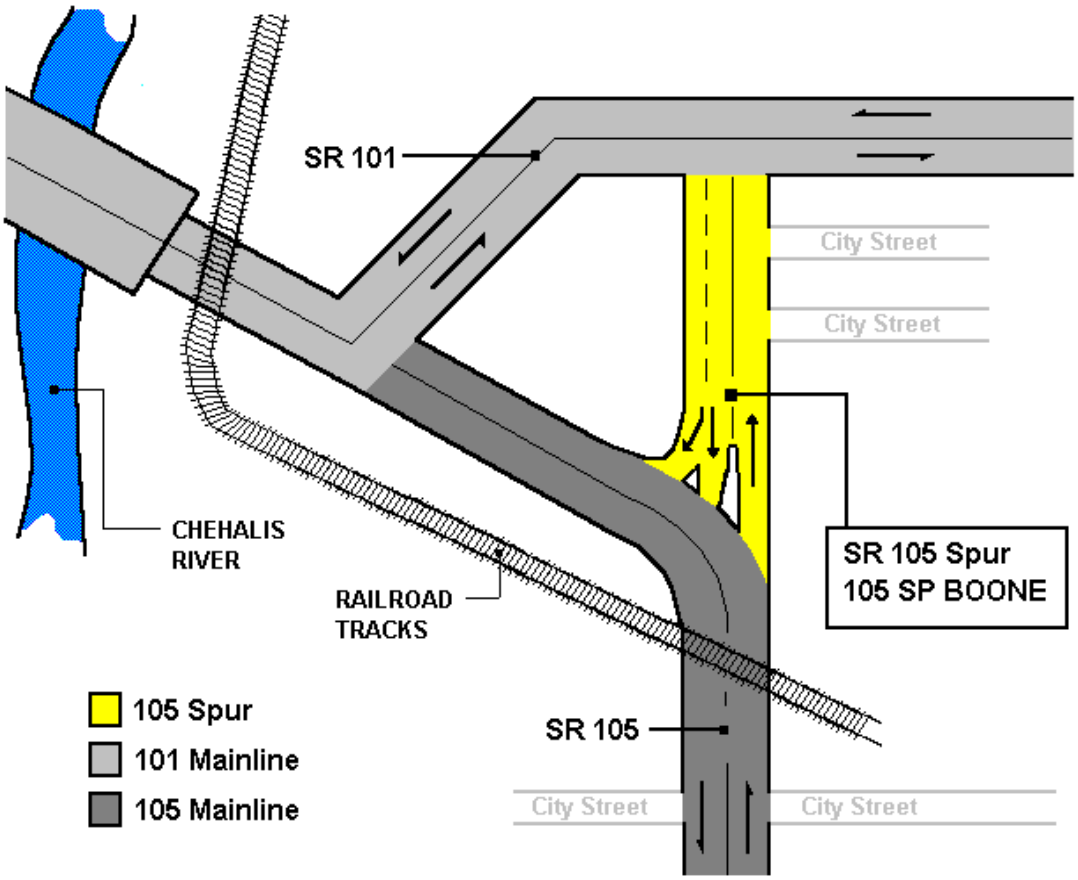


Grays Harbor County
Aberdeen
SR-101
SR-101 CO ABERDN

EXAMPLE: 101 CO ABERDN

Where:	101	=	SR Number
	CO	=	RRT for Couplet
	ABERDN	=	Abbreviated name of city where RRT exists

SPUR EXAMPLE



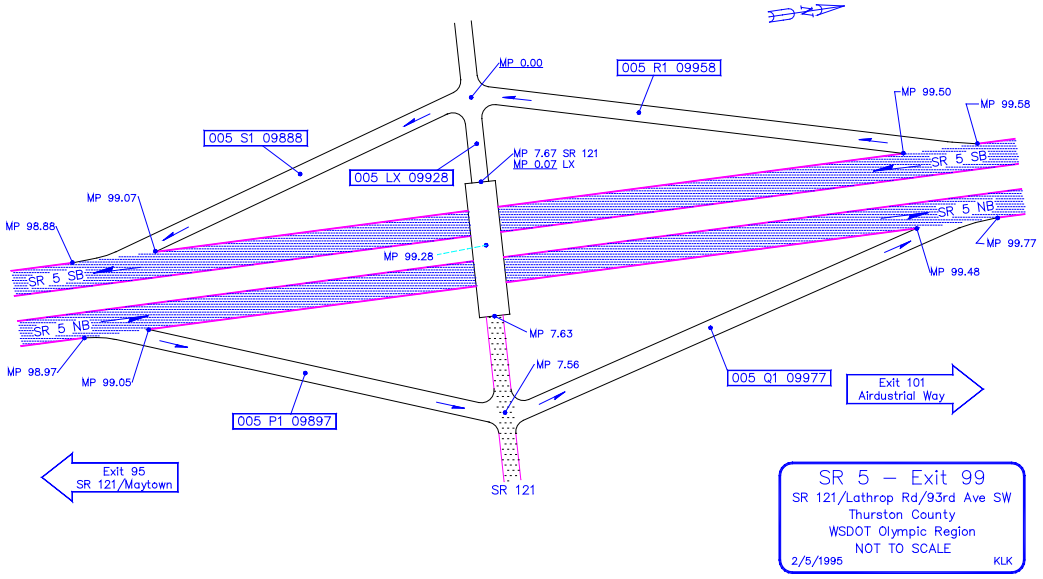
EXAMPLE: 105 SP BOONE

Where:	105	=	SR Number
	SP	=	RRT for Spur
	BOONE	=	Name of street where RRT exists

2) The following RRTs use the Mainline SRMP where the RRT attaches to the Mainline. The begin SRMP for that RRT will be 0.00.

CD	Collector Distributor Dec	P1 - P9	Off Ramp, Inc
CI	Collector Distributor Inc	Q1 - Q9	On Ramp, Inc
FD	Frontage Road Dec	R1 - R9	Off Ramp, Dec
FI	Frontage Road Inc	S1 - S9	On Ramp, Dec
LX	Crossroad within Interchange	HD	Grade-Separated HOV-Dec
HI	Grade-Separated HOV-Inc		

DIAMOND INTERCHANGE EXAMPLE



EXAMPLE: 005 R1 09958

Where: 005 = SR Number
R1 = RRT for decreasing MP direction off-ramp (R ramp)
09958 = Mainline SRMP at beginning of the R ramp where it leaves the mainline

3) The following RRTs use descriptive names such as a city or ship name for the RRQ. The begin SRMP is always a zero value (000.00).

FS	Ferry Ship
FT	Ferry Terminal

An SR number of 999 is used for Ferry Ships since they are not assigned to a specific route. The RRQ represents the name or abbreviated name of the ship.

An SR number of 999 is used for Ferry Terminals only if the terminal is not located on a route. The RRQ represents the name or abbreviated name of the city where the terminal is located.

STATE ROUTE MILEPOST (SRMP)

State Route Milepost (SRMP) is a linear referencing system used to assign a logical number to a given point along a route. The SRMP is carried to the hundredth of a mile (123.45). If realignment shortens or lengthens a section of an SR, the SRMP will adjust with an equation and the SRMP will not change through the rest of the route.

The SRMP identifies reference points and should **NOT** be used for computing distance.

STATE ROUTE MILEPOST BACK (B) INDICATOR

The State Route Milepost Back (B) indicator designates whether the milepost value is the 'back' duplicate of a milepost value 'ahead' on the route. Ahead values have an implied 'A' (blank).

A back SRMP occurs as a result of:

- A realignment that lengthens a section of an SR other than at the end of the route.
- Adding mileage to the beginning of an SR.

ACCUMULATED ROUTE MILE (ARM)

Accumulated Route Mileage (ARM) is an accrual of mileage from the beginning of a route to the end of the route. It accrues through coincident sections where two or more SR's share one physical alignment. The ARM is an important factor in the realignment of a State Route. It does **not** contain equations - it flows through them to give true mileage (see section on equations). The ARM is carried to the hundredth of a mile (123.45).

All length measurements are calculated using the ARM value.

LANE MILE

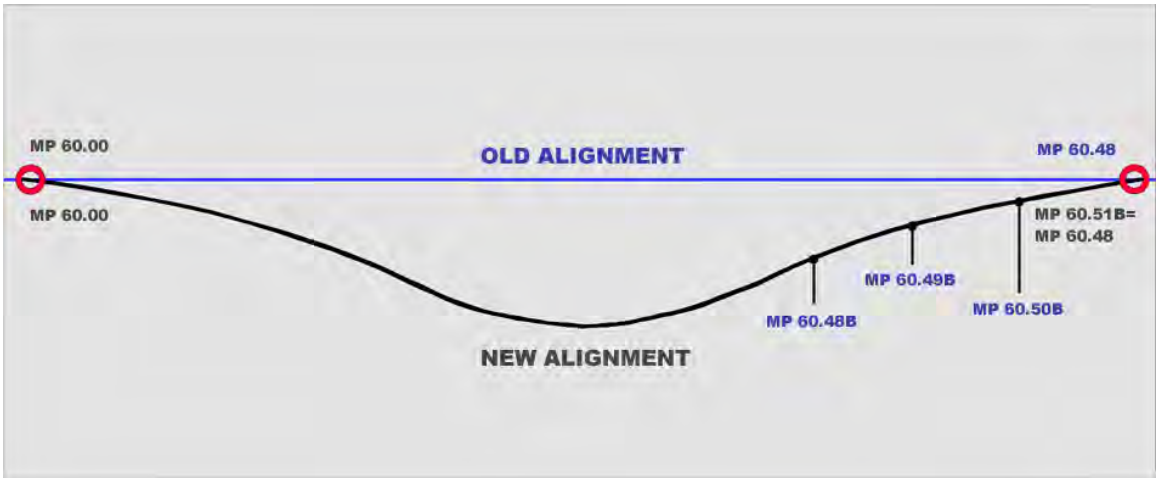
One lane of highway for one mile, i.e. – a section of highway one mile long with 5 lanes has the equivalent of 5 lane miles.

EQUATION (EQ)

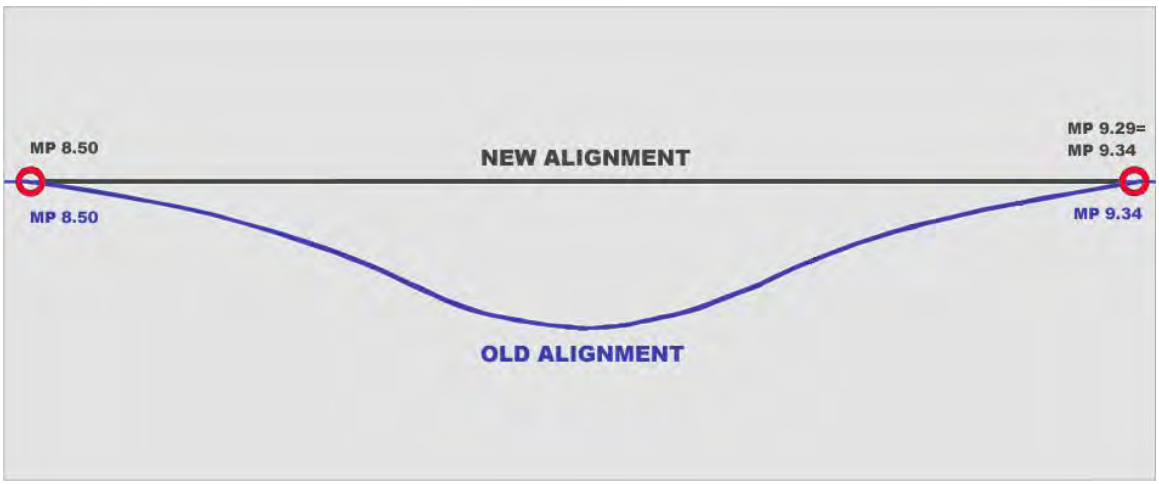
There are 3 kinds of Equations: Back, Gap & Physical Gap

The following page contains drawings of these three types of equations

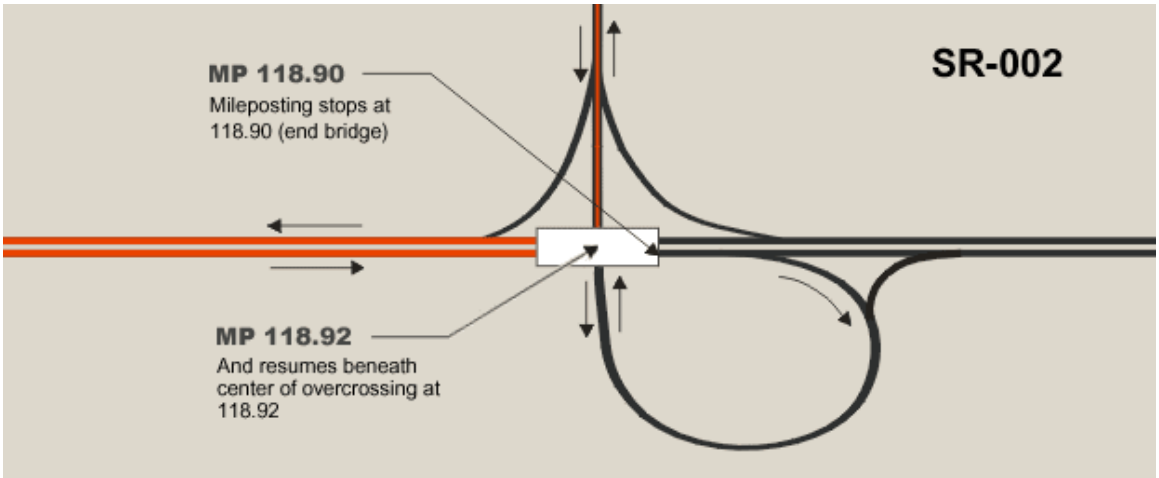
This drawing shows the lengthening of a route due to realignment, creating a back equation



This drawing shows the shortening of a route due to realignment, creating a gap equation



This drawing shows a physical gap equation, due to a separation of alignment



COINCIDENT (COINC)

This occurs when two (or more) State Routes share the same physical alignment. A Coincident location carries one Major State Route and up to three Minor Routes. The Major SR carries all the highway data. The Minor SR will only contain Region and County line breaks.

The assignment of Major or Minor is first based on functional classification of the involved routes. For example, a Principal Arterial would take precedence over a Minor Arterial and/or a Collector. A Minor Arterial would take precedence over a Collector. An Interstate takes precedence over all other routes. If more than one highway has the same functional classification, the route with the lowest SR number will take precedence. ARM accumulates through the coincident section of the Minor SR. This publication contains a listing of Coincident Routes by SR, SRMP & ARM.

FEATURE Following is a list of how some of the features are entered in the "feature" column:

Beg Bridge	Beg Eq	On Ramp
End Bridge	Uxing	Off Ramp
Enter Co	Intersectn	RR Xing
Beg Street	Misc Featr	Border Sta
End Street	Beg Ctlsec	Weigh Sta
Beg Tunnel	Flyer Stop	Leave City
End Tunnel	Prk & Ride	Toll Booth
Enter Dist	Rest Area	Ferry Term

DIRECTION TO INVENTORY

Features that get tagged with this code occur <u>ON</u> the main traveled way.

I = INCREASING - Milepost increases when traveling the roadway in the increasing direction. Usually odd numbered routes run south to north increasing and even numbered routes run west to east increasing. There are some exceptions to this rule.

D = DECREASING - Milepost decreases when traveling the roadway in the decreasing direction. Usually odd numbered routes run north to south decreasing and even numbered routes run east to west decreasing. There are some exceptions to this rule.

B = BOTH - The feature affects both the increasing and decreasing direction of travel.

LEFT/RIGHT INDICATOR

Features that get tagged with this code occur ALONG SIDE the main traveled way. All Left Right Indicators are assigned based on the INCREASING direction of travel, starting from the left and working to the right.

L = LEFT Represents features located along side the decreasing traveled way.

LC = LEFT CENTER Represents features located along side the median side of the decreasing traveled way.

C = CENTER Represents a feature that occurs between the increasing and decreasing traveled way.
RC = RIGHT CENTER Represents features located along side the median side of the increasing traveled way.

R = RIGHT Represents features located along side the increasing traveled way.

B = BOTH The feature occurs along side both the increasing and decreasing traveled way.

DESCRIPTION – DESCRIPTION OF FEATURE

Bridge/UXing/XRoad - OW (Owner Code)

ST = State	CO = County	CT = City
FS = Forest Service	PK = Park Service	RS = Reservation
PV = Private	MY = Military	OT = Other
SO = State/County	SI = State/City	CC = County/City

Bridge/UXing/XRoad - TC (Traffic Control)

SS = Stop Sign	YS = Yield Sign
AF = Amber Flashing	RS = Railroad Signal
OT = Other Traffic Control	NO = No Traffic Control
SZ = School Zone	PC = Pedestrian Control
SG = Stop and Go	FS = Fire Signal
RF = Red Flashing	OF = Officer or Flagman

Bridge/UXing/XRoad - L (Illumination) Y = Yes
N = No

WIDTH AND SURFACE INFORMATION

DECREAS/DIV (DECREASING/DIVIDED)

NBR LNS D = Number of lanes in decreasing direction of the roadway.

I = Number of lanes in increasing direction of the roadway.

LFT SHD W = Width of outside shoulder in decreasing direction of the roadway. No width will be shown when surface type = C or W.

S = Shoulder Surface Type

A = Asphalt	B = Bituminous	G = Gravel
S = Soil	C = Curb	W = Wall
P = Portland Cement Concrete		O = Other

RDY W = Width of roadway in decreasing direction of the roadway.

S = Roadway Surface Type

A = Asphalt	P = Portland Cement Concrete
B = Bituminous	G = Gravel
S = Soil	O = Other

RHT SHD W = Width of inside shoulder in decreasing direction of the roadway. No width will be entered when surface type = C or W.

S = Shoulder Surface Type (same as left shoulder surface types).

MEDIAN

WD Median Width

S Median Surface Type

S = Soil	G = Gravel
O = Other	A = Asphalt
B = Bituminous	P = Portland Cement Concrete

BR Median Barrier Type

DE = Depressed	CU = Curb
FB = Flex Beam	JE = Jersey Type Barrier
GP = Guide Post	RG = Rock Wall * Gabion
UP = Unprotected	IA = Impact Attenuator
WA = Wall	FE = Fence
SS = Snow Shed	BE = Bridge End Guard Rails
GR = Guard Rail	CA = Cable

INCRES/UNDI (INCREASING/UNDIVIDED)

Will be used for divided multilane in the direction of inventory, and for the entire roadway for two lane or undivided highways.

LFT SHD W = Width of inside shoulder in increasing direction of the roadway.

S = Shoulder Surface Type

RDY W = Width of roadway in increasing direction of the roadway.

S = Roadway Surface Type

RHT SHD W = Width of outside shoulder in increasing direction of the roadway.

S = Shoulder Surface Type

SPC USE LNS WID - Width of Special Use Lane

Special Use Lane Types - (Appears in Description Field)

Climbing	Two Way Turn	High Occupancy Vehicle
Bicycle	Reversible	Slow Vehicle Turnout
Chain Up	Transit	Truck Climbing Shoulder
Holding	Weaving/Speed Change	

TOT RDY WIDTH - Total roadway width includes decreasing roadway, increasing roadway and special use lane widths. This total does not include shoulder and median widths.

CLASSIFICATIONS

MTCE — Maintenance

A = Maintenance Area Number
SE = Maintenance Section Number

CITY NBR — City Number assigned to a city by the Census.

STFC — State Functional Classification

R1 = Rural-Principal Arterial	U1 = Urban-Principal Arterial
R2 = Rural-Minor Arterial	U2 = Urban-Minor Arterial
R3 = Rural-Collector	U3 = Urban-Collector
R4 = Rural-Unclassified	U4 = Urban-Unclassified
R5 = Rural-Interstate	U5 = Urban-Interstate

Urban Area - An area designated by WSDOT in cooperation with the Transportation Improvement Board and Region transportation planning organizations, subject to the approval of the FHWA.

Legal Speed

D = Official speed limit as designated for decreasing direction of the roadway.
IB = Official speed limit as designated for increasing or both directions of the roadway.

TR — Terrain - The contour of the roadway as it relates to the frequency and steepness of hills and the effect on truck speed.

L = Level - Trucks maintain speed.
R = Rolling - Trucks slow down frequently.
M = Mountainous - Trucks slow to a crawl frequently.

PK — Parking Zone - Type of parking that is permitted on a State Route (cities only).

B = Both sides parking permitted
L = Left side parking only permitted
P = Parking prohibited on both sides
R = Right side parking only permitted
X = Prohibited during peak hours

ST — Street Name Alias - The local name of a street assigned to a State Route as the State Route passes through a city.
* = A street name alias is assigned to a State Route (The street name will appear in the description field).

$ — Designates when the previous feature is no longer valid.

INTERSECTION DETAIL

SRMP	State Route Milepost at intersection.
B	"Back" milepost indicator.
ARM	Accumulated route mile at intersection.

TURN LANES

Entering an intersection in the increasing direction of travel would be "near approach."

Entering an intersection in the decreasing direction of travel would be "far approach."

LGT WD	Length (in miles) and width (in feet) will appear in each category of turn and acceleration lanes.
L NEAR	Left turn lane in near approach of intersection.
R NEAR	Right turn lane in near approach of intersection.
L FAR	Left turn lane in far approach of intersection.
R FAR	Right turn lane in far approach of intersection.

ACCELERATION LANES

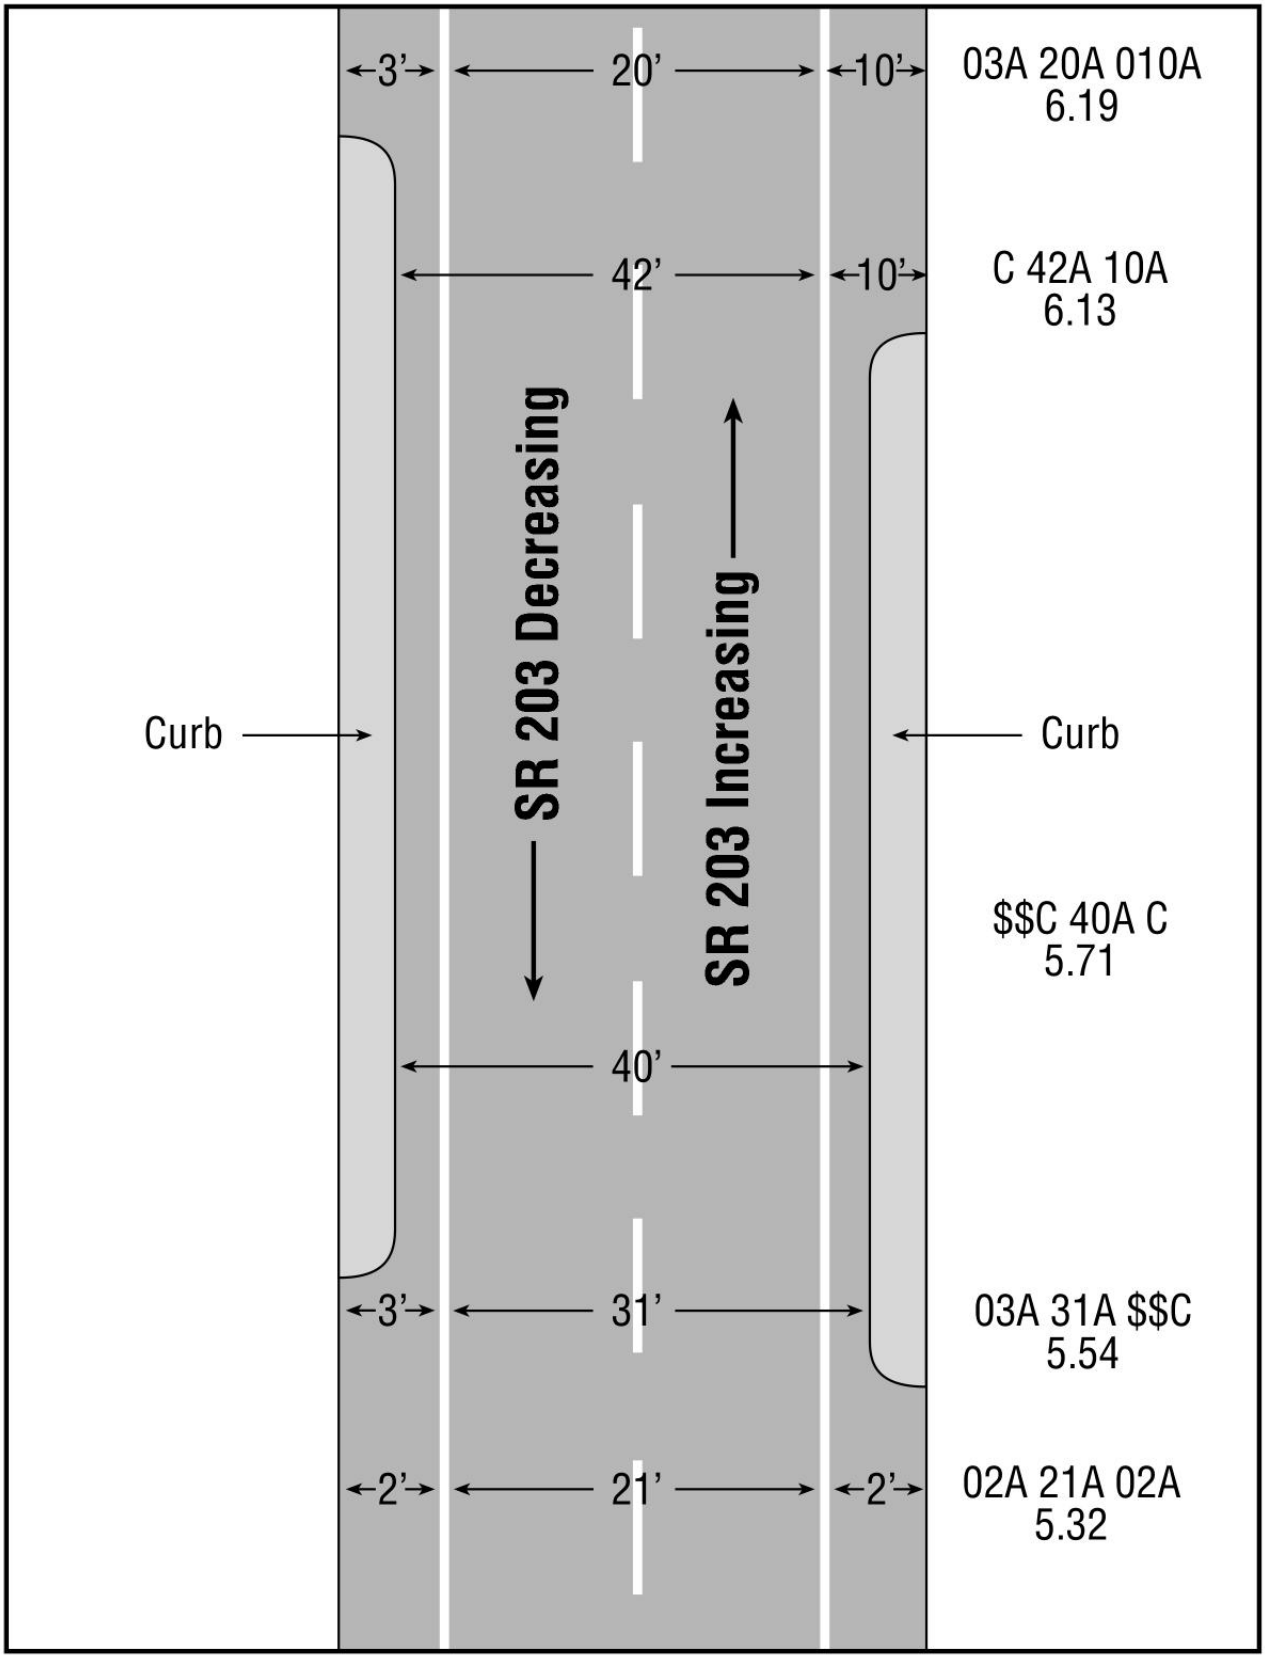
LEFT	Left acceleration lane in near approach of intersection.
L CNTR	Acceleration lane in near approach of intersection.
R CNTR	Acceleration lane in far approach of intersection.
RIGHT	Right acceleration lane in far approach of intersection.

Vehicles traveling in the decreasing direction of the roadway use Left and Left Center acceleration lanes.

Vehicles traveling in the increasing direction of the roadway use Right and Right Center acceleration lanes.

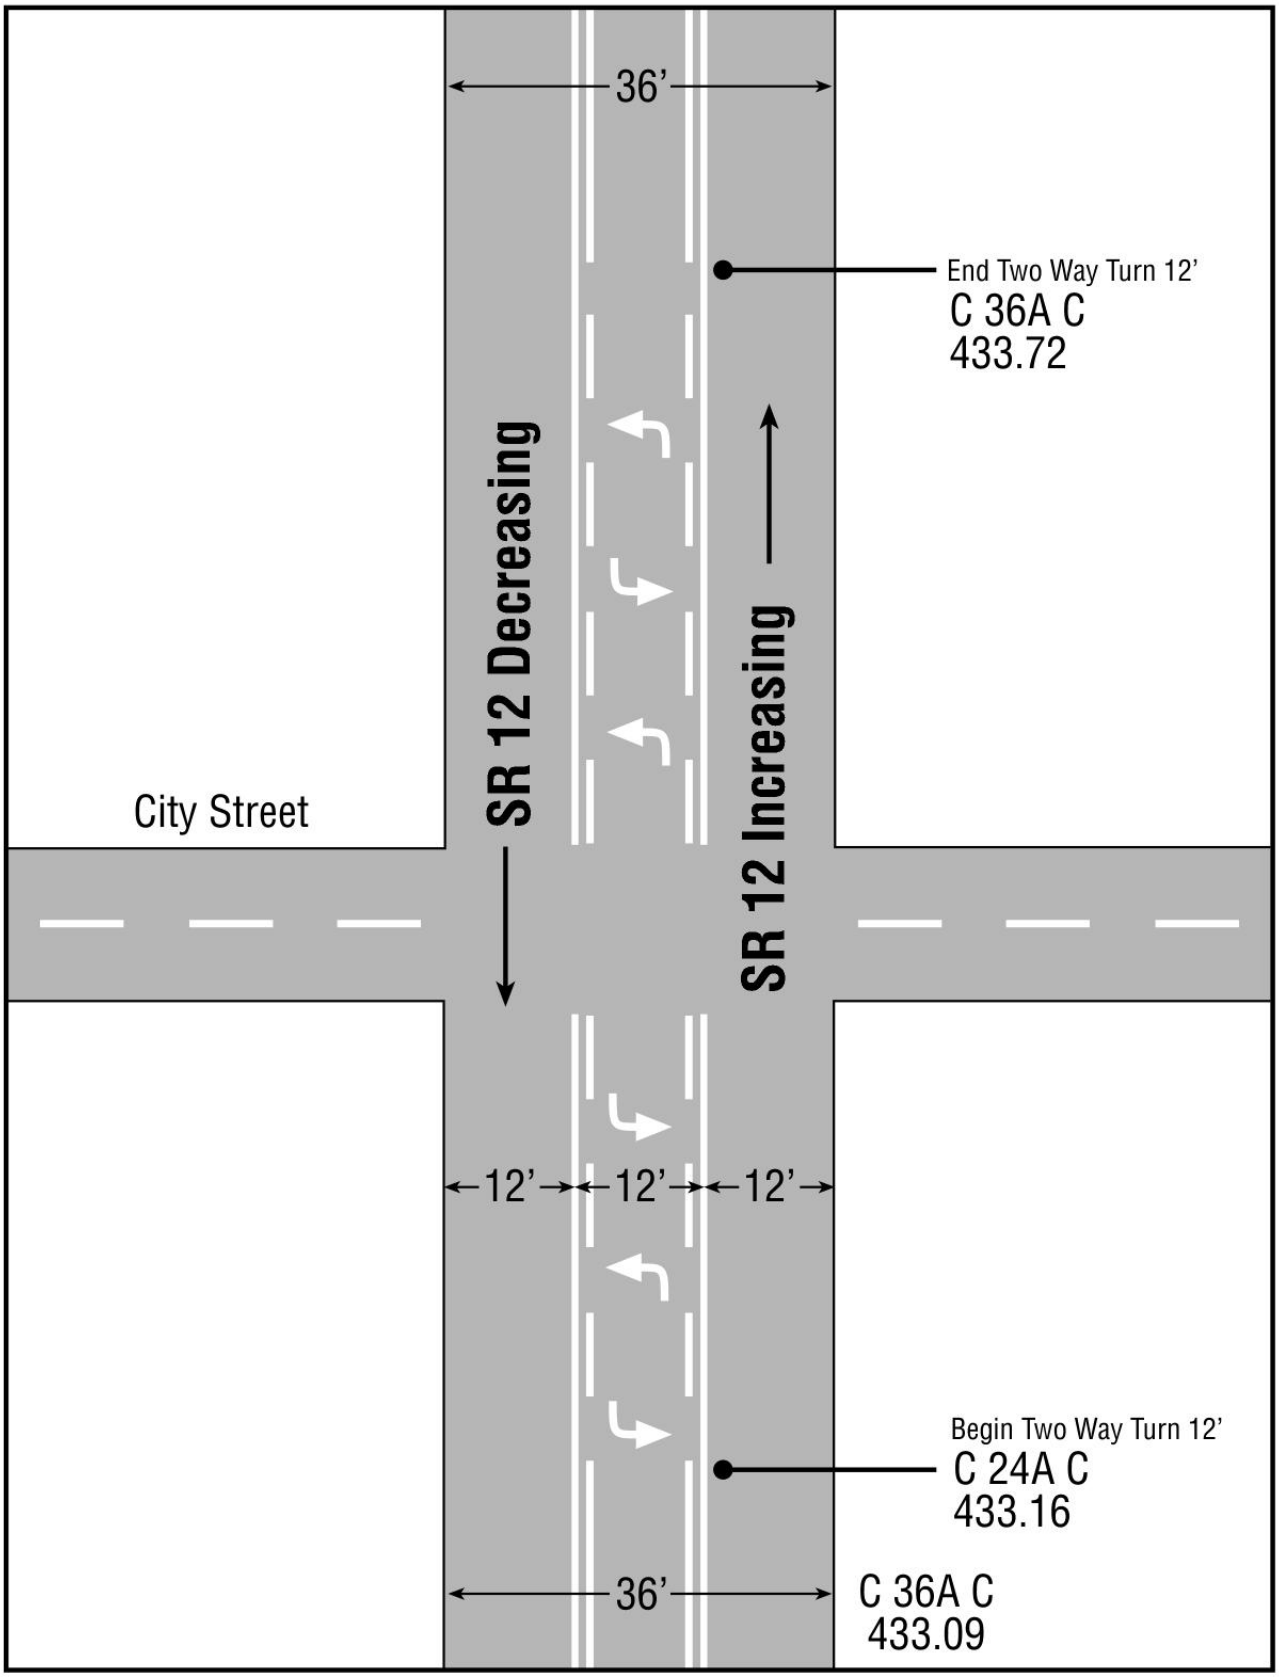
If you have any questions regarding the State Highway Log or the roadway data, or you can provide us with updated information, please contact the Roadway Data Office at (360) 570-2361 or fax (360) 570-2400. We are continuously looking for sources to provide us with quality information.

The following pages contain sketches to better explain how the State Highway Log Planning Report is compiled.



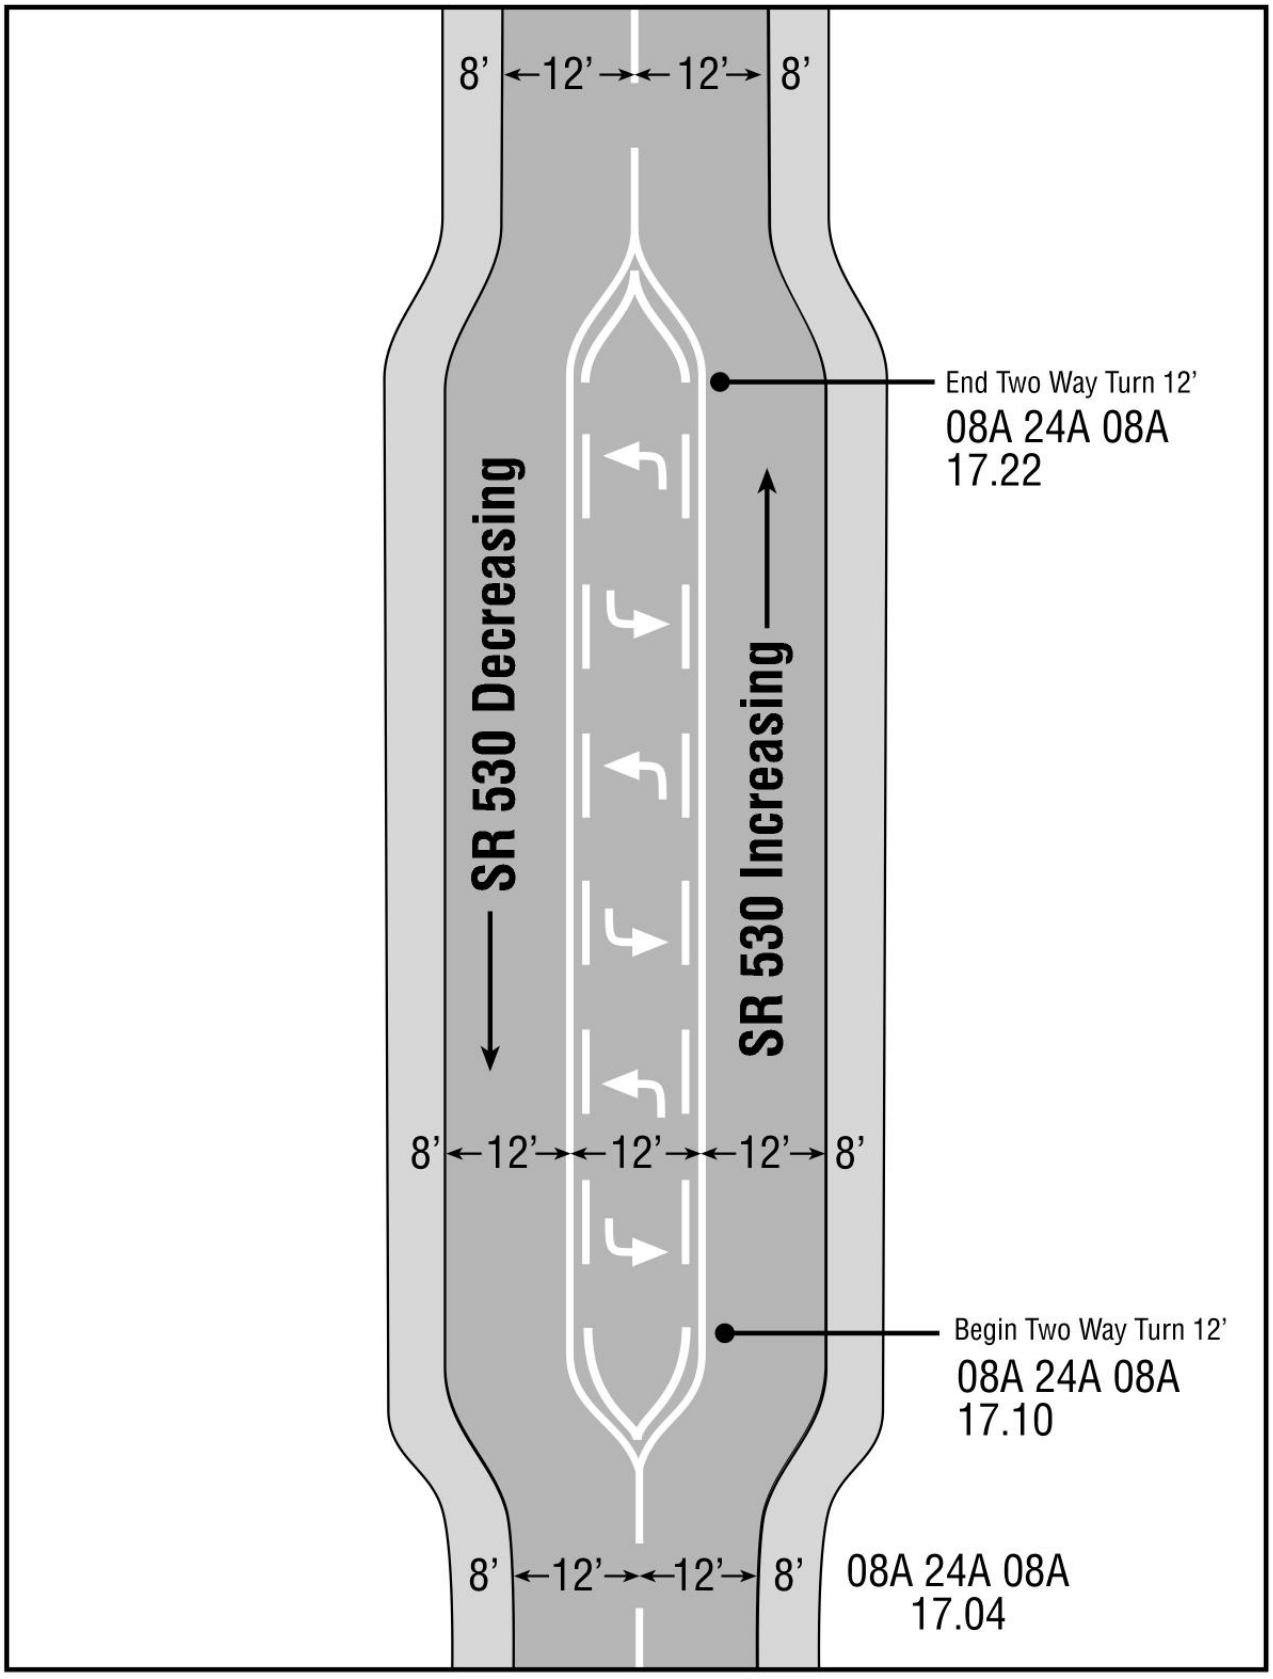
Roadway Measurements with and without curbs - Asphalt Surface

Refer to SR 203 SRMP 5.32 - 6.19



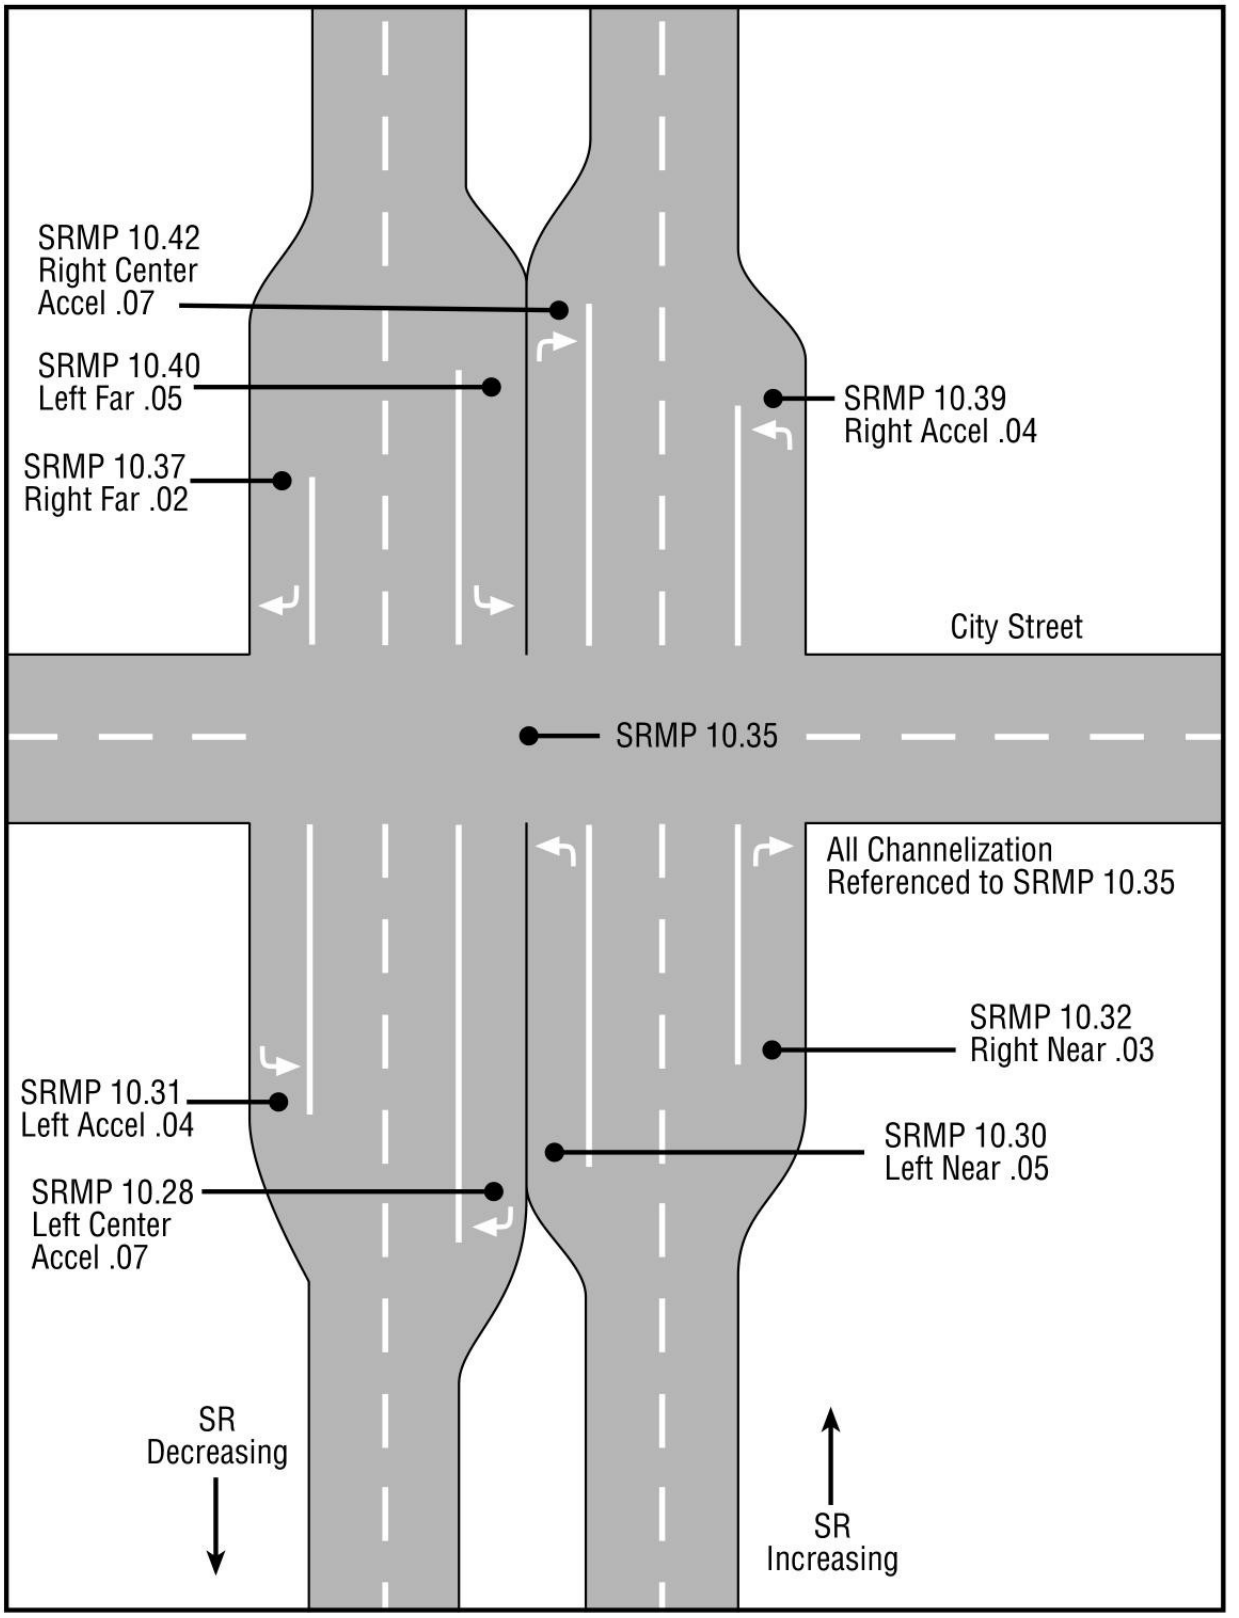
Two Way Turn (Curb to Curb) Asphalt Surface

Refer to SR 12 SRMP 433.09 - 433.72



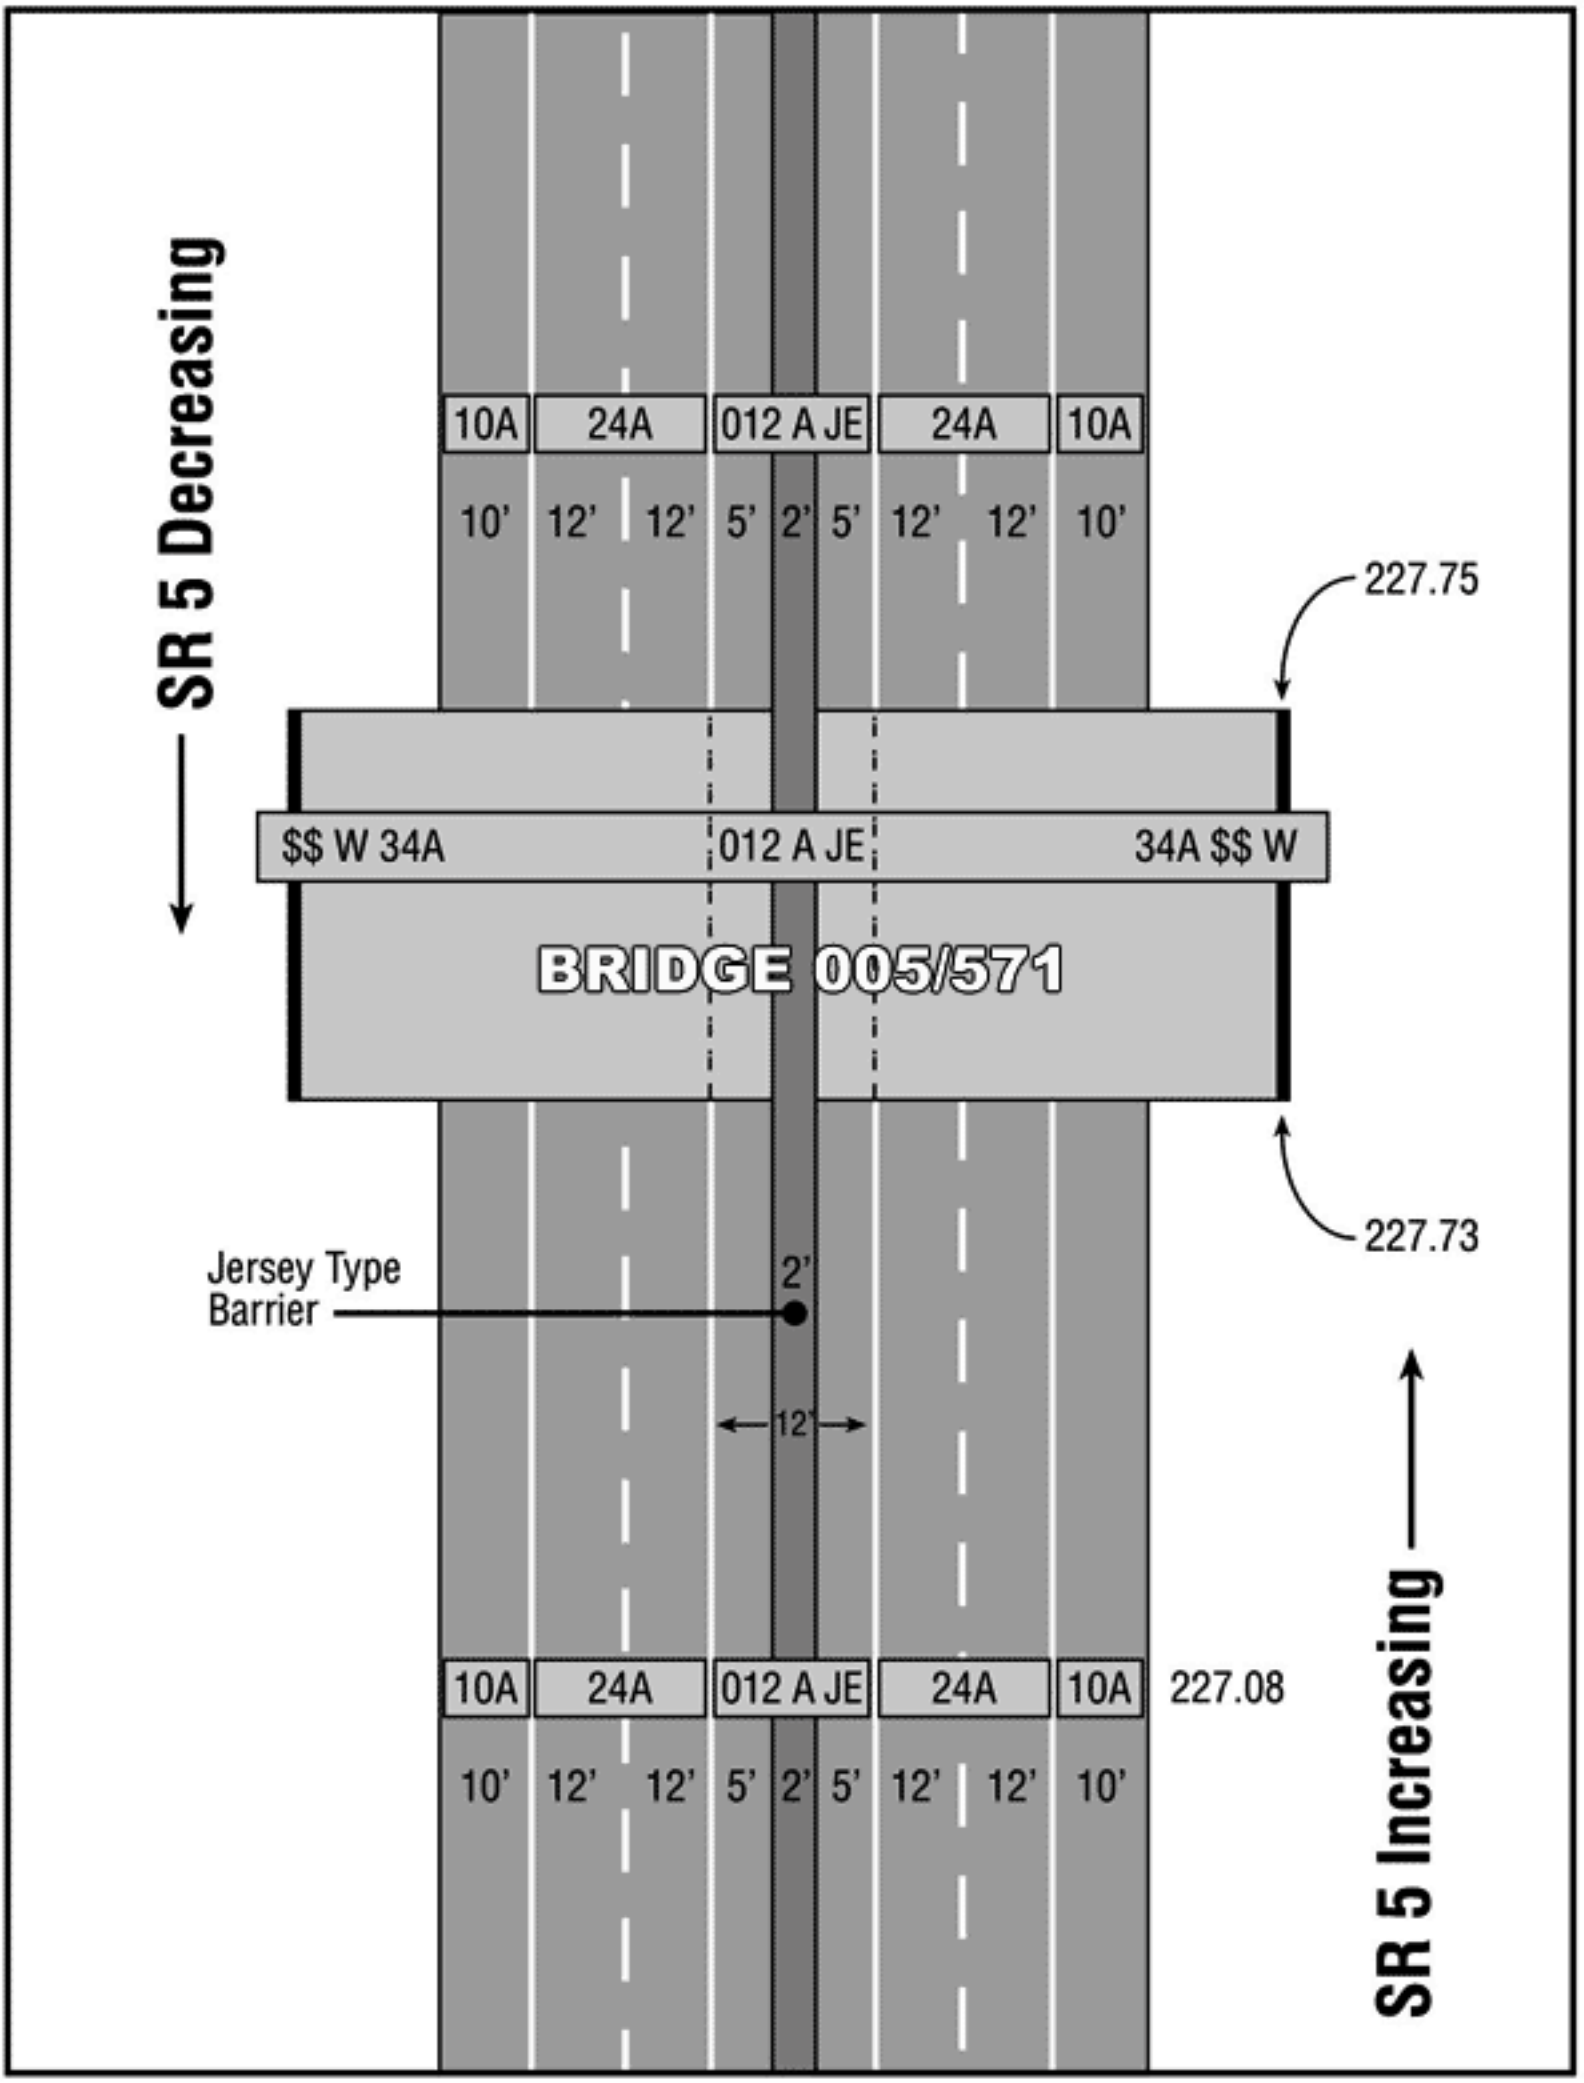
Two Way Turn (with Shoulders) Asphalt Surface

Refer to SR 530 SRMP 17.04 - 17.30



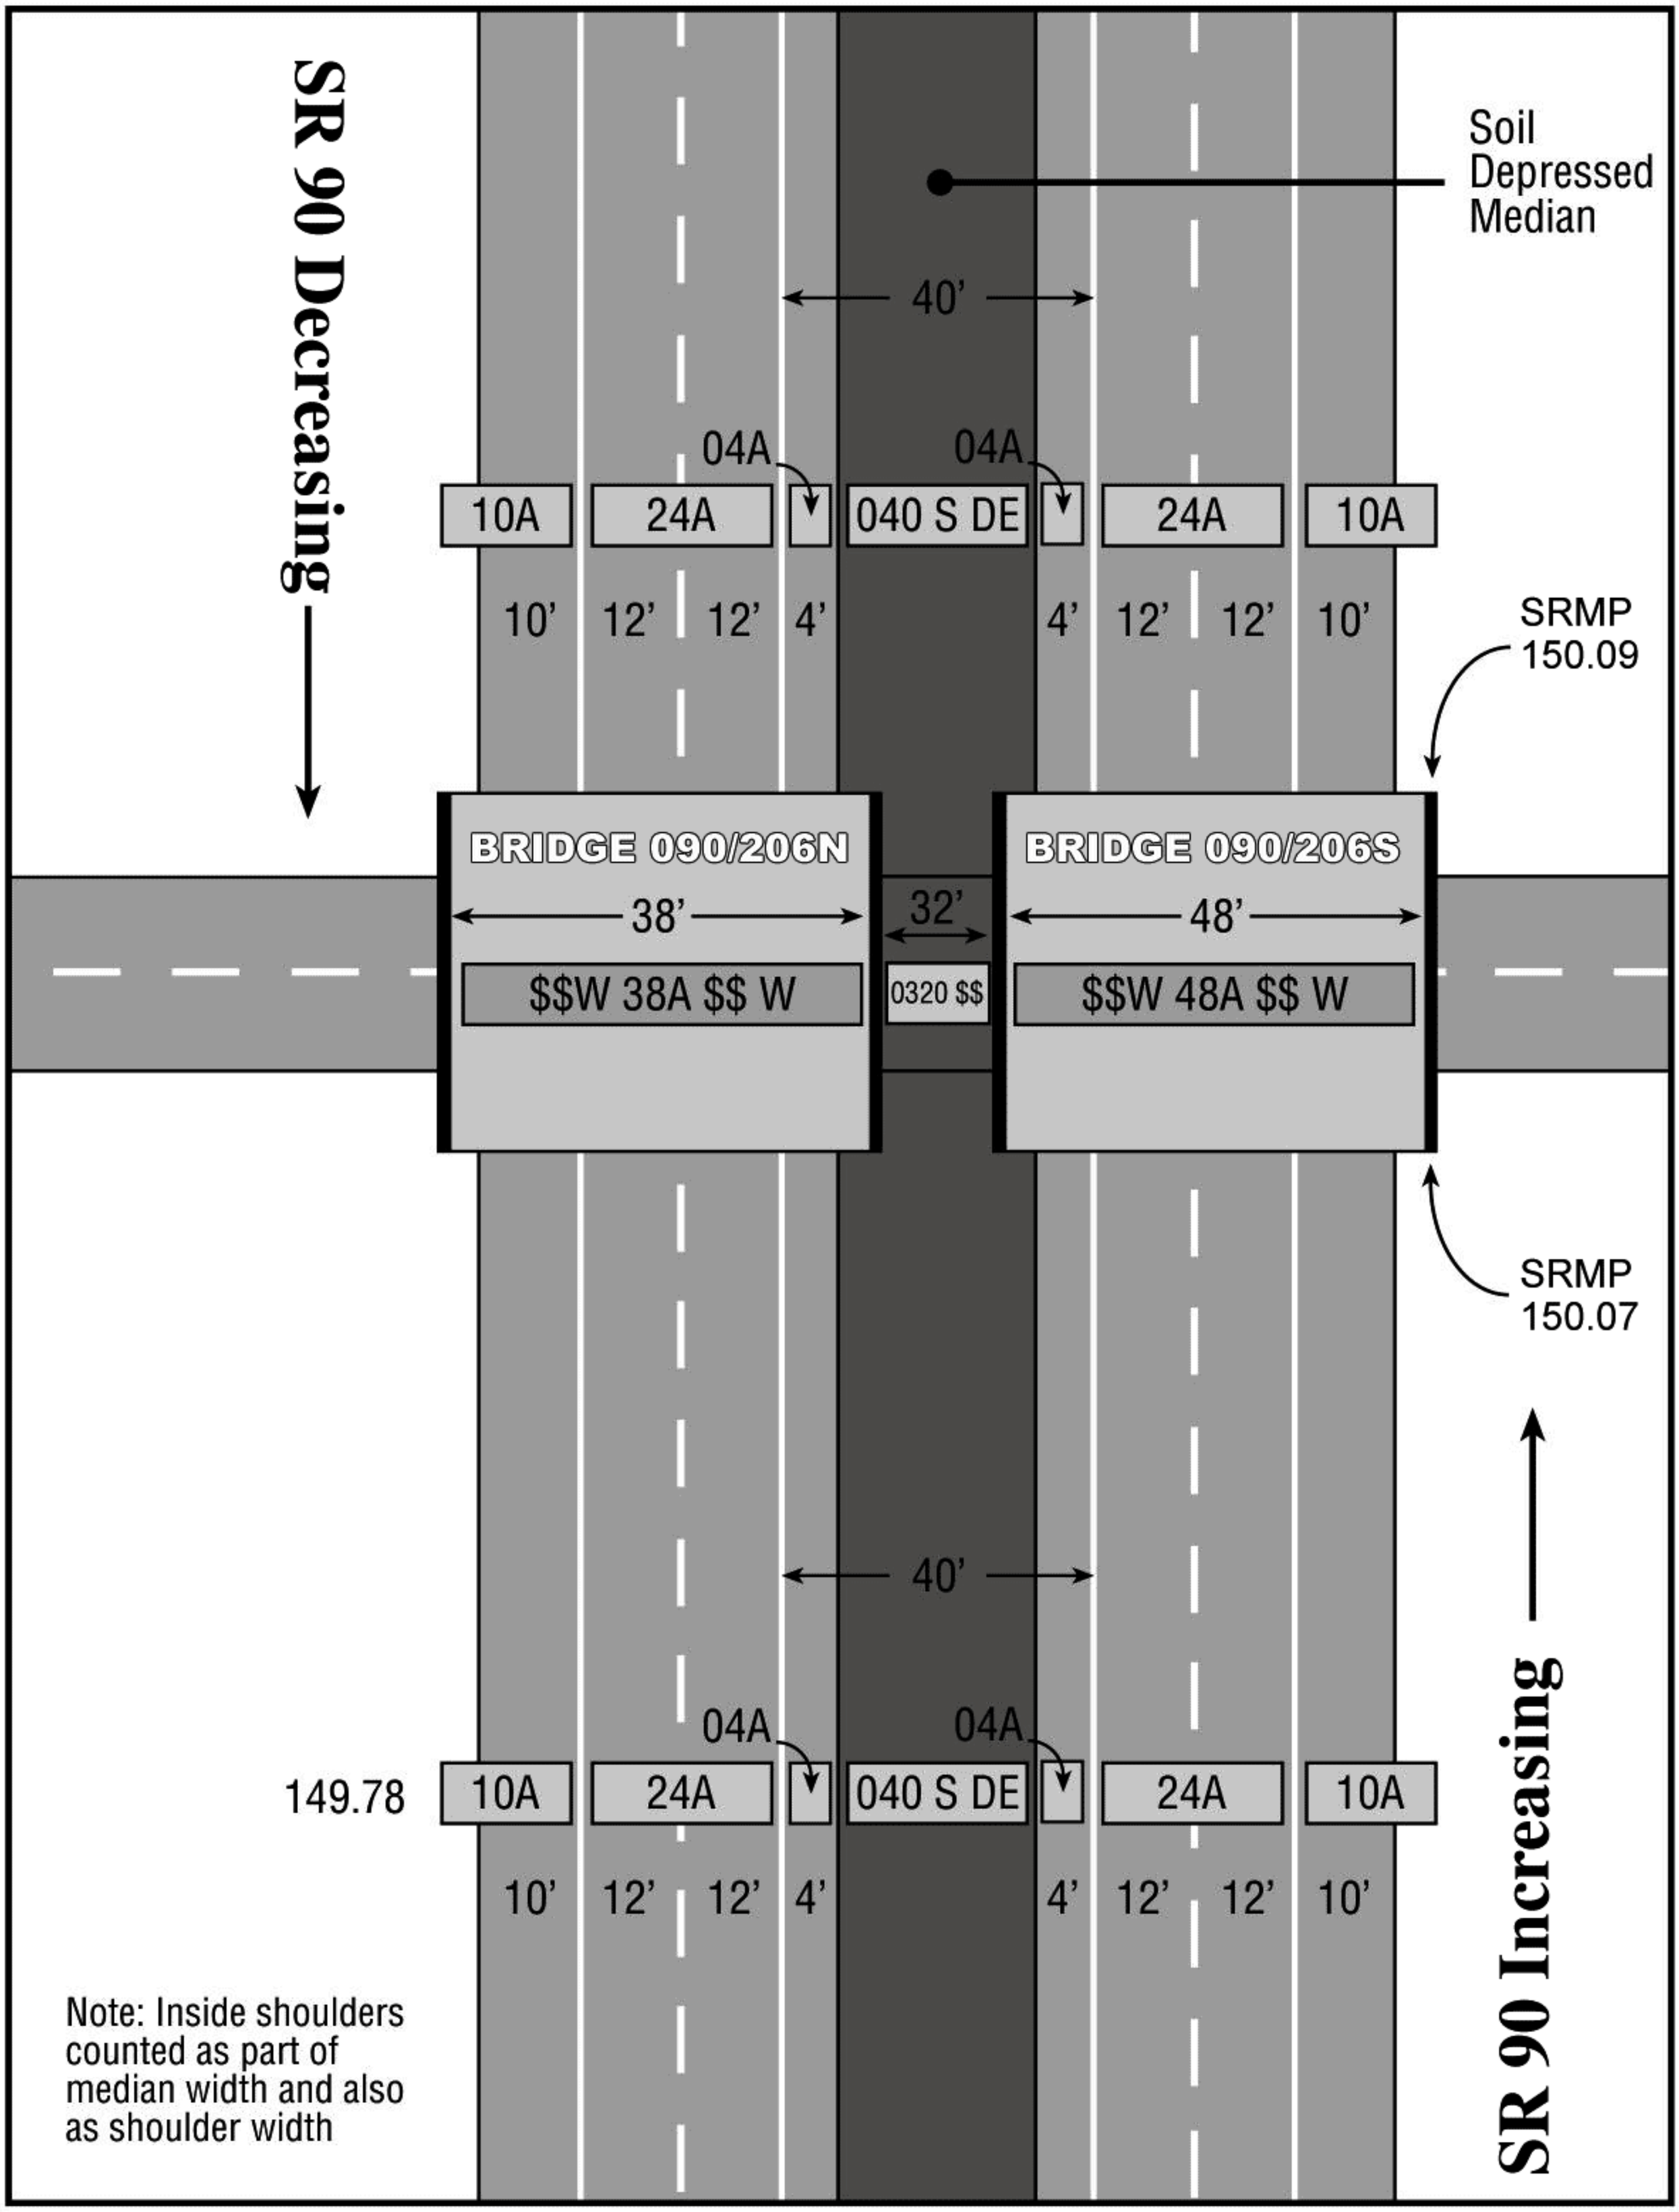
Intersection Channelization (Turn/Accel Lanes)

Examples of Turn/Acceleration Lanes Located at the Bottom of State Highway Log Pages



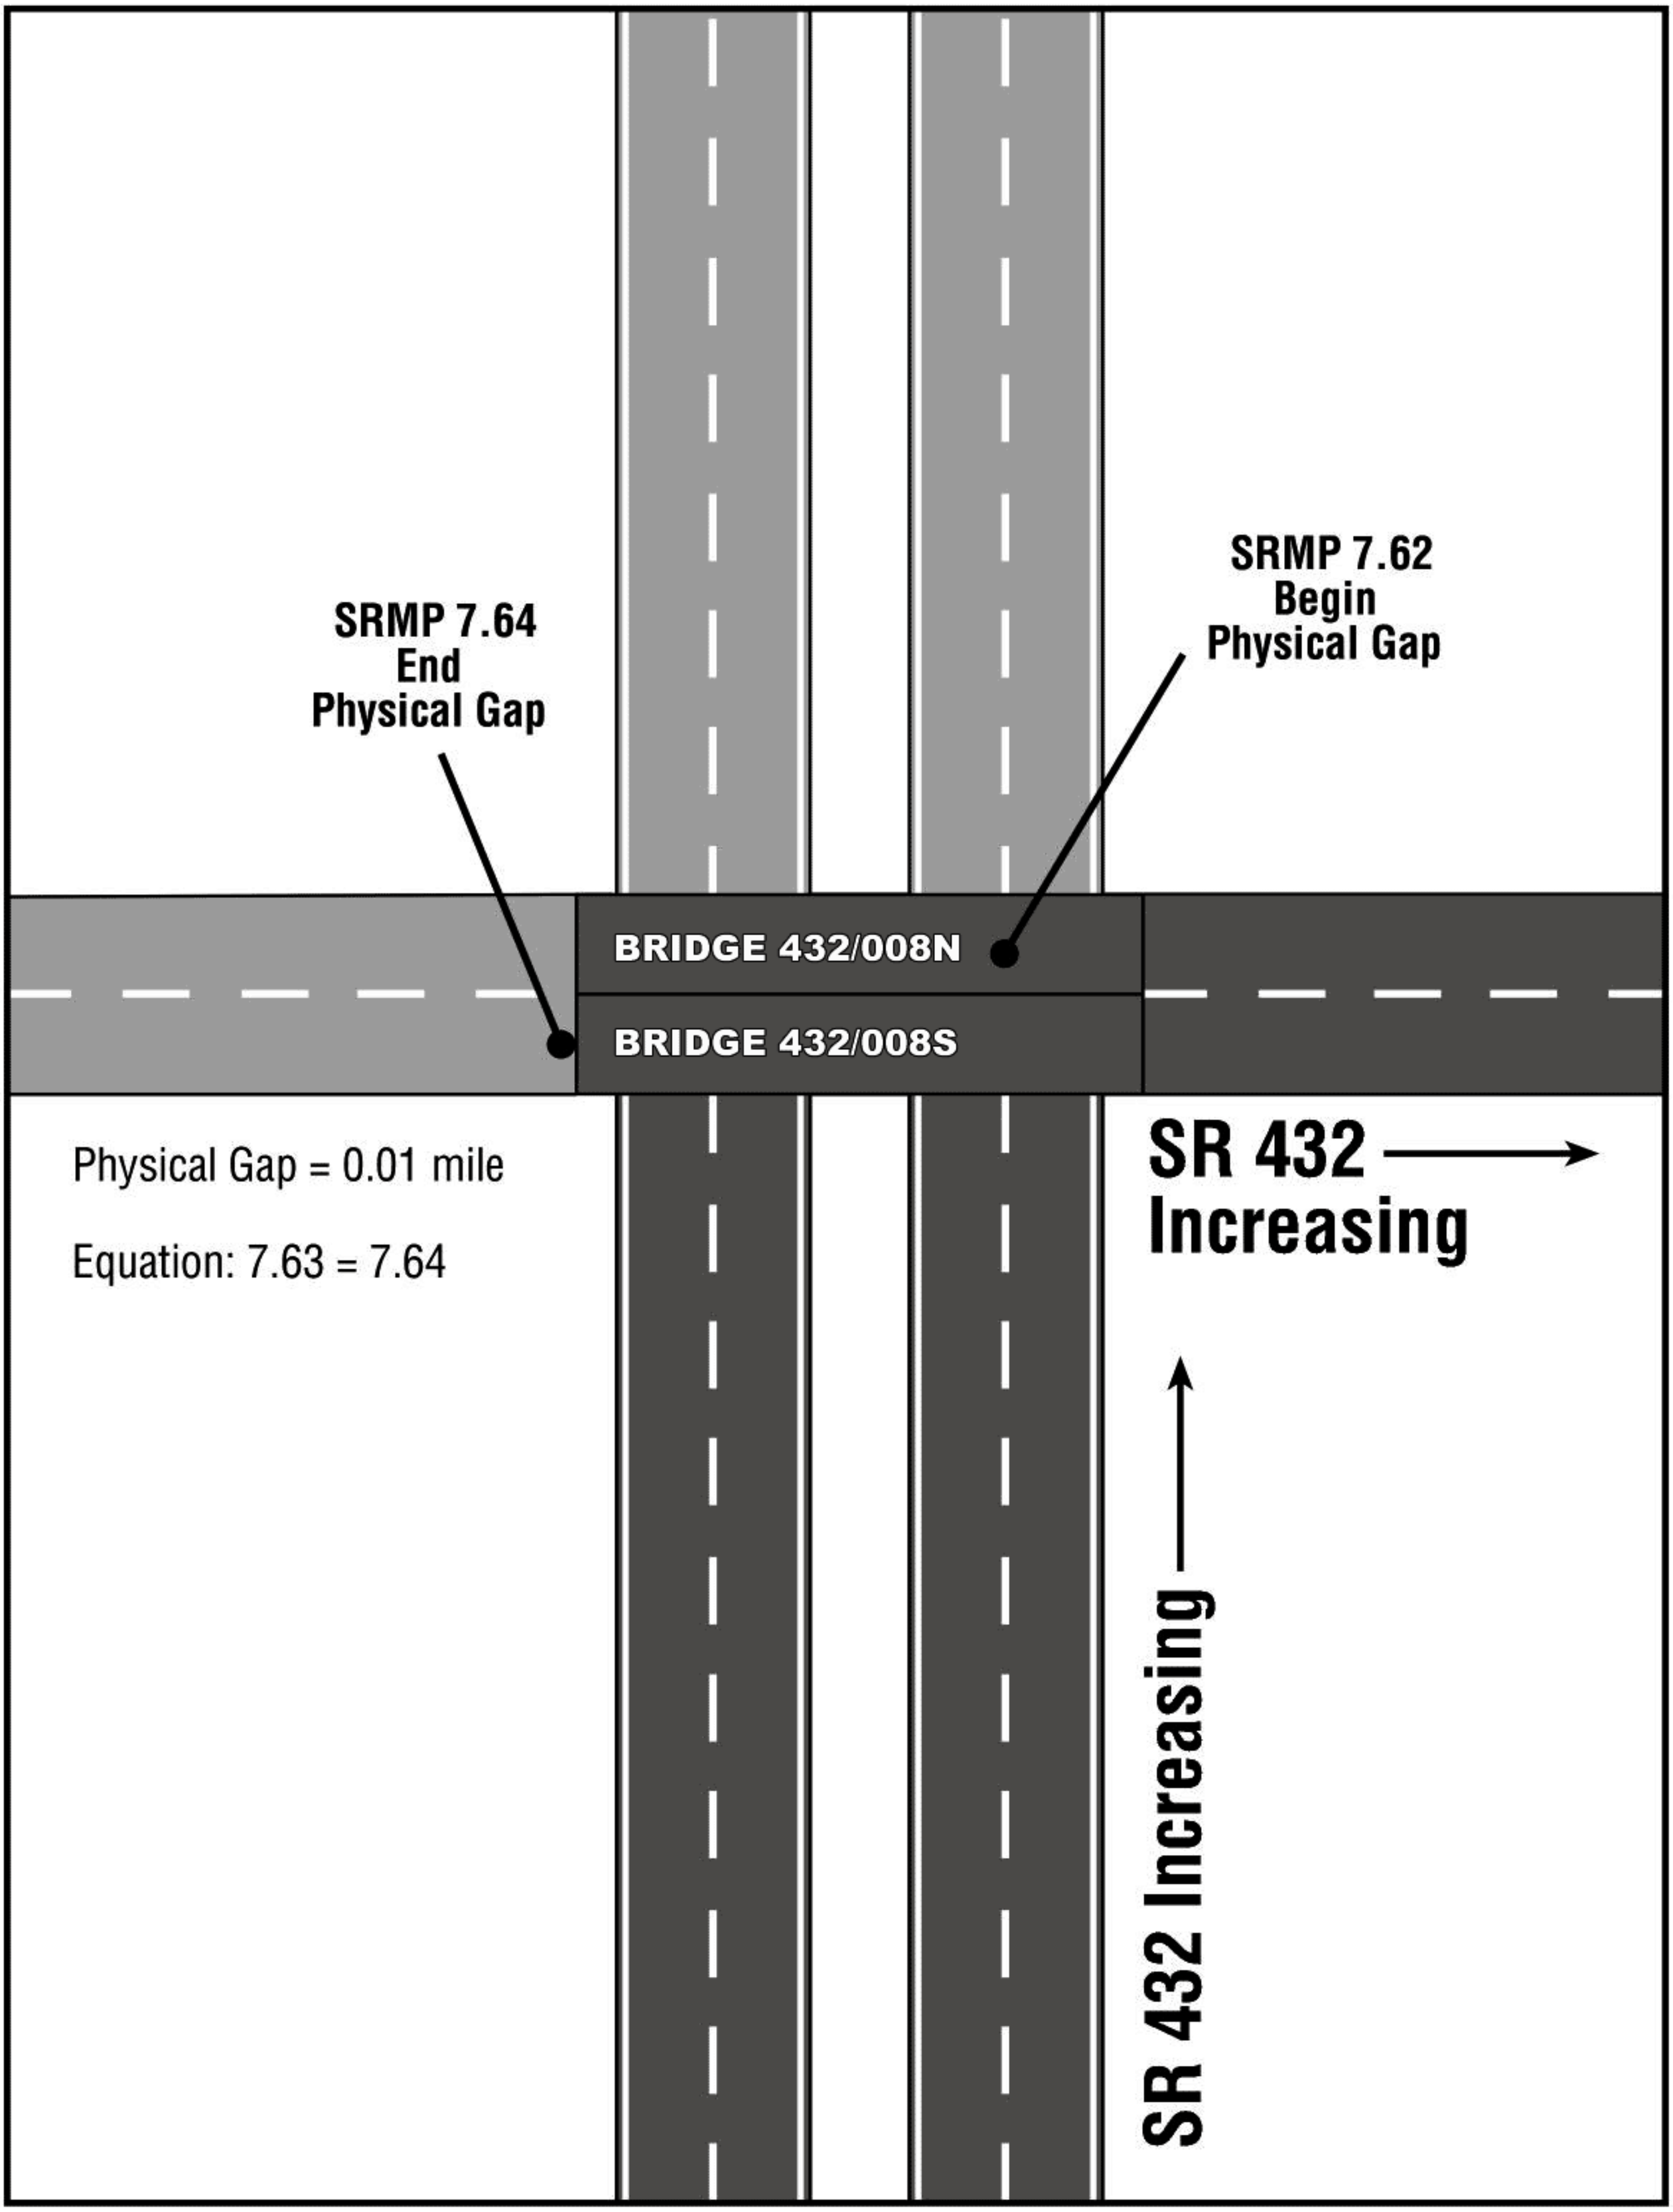
Divided Highway Measurements (Asphalt Surface w/Paved Median)

Refer to SR 5 SRMP 227.08 - 227.75



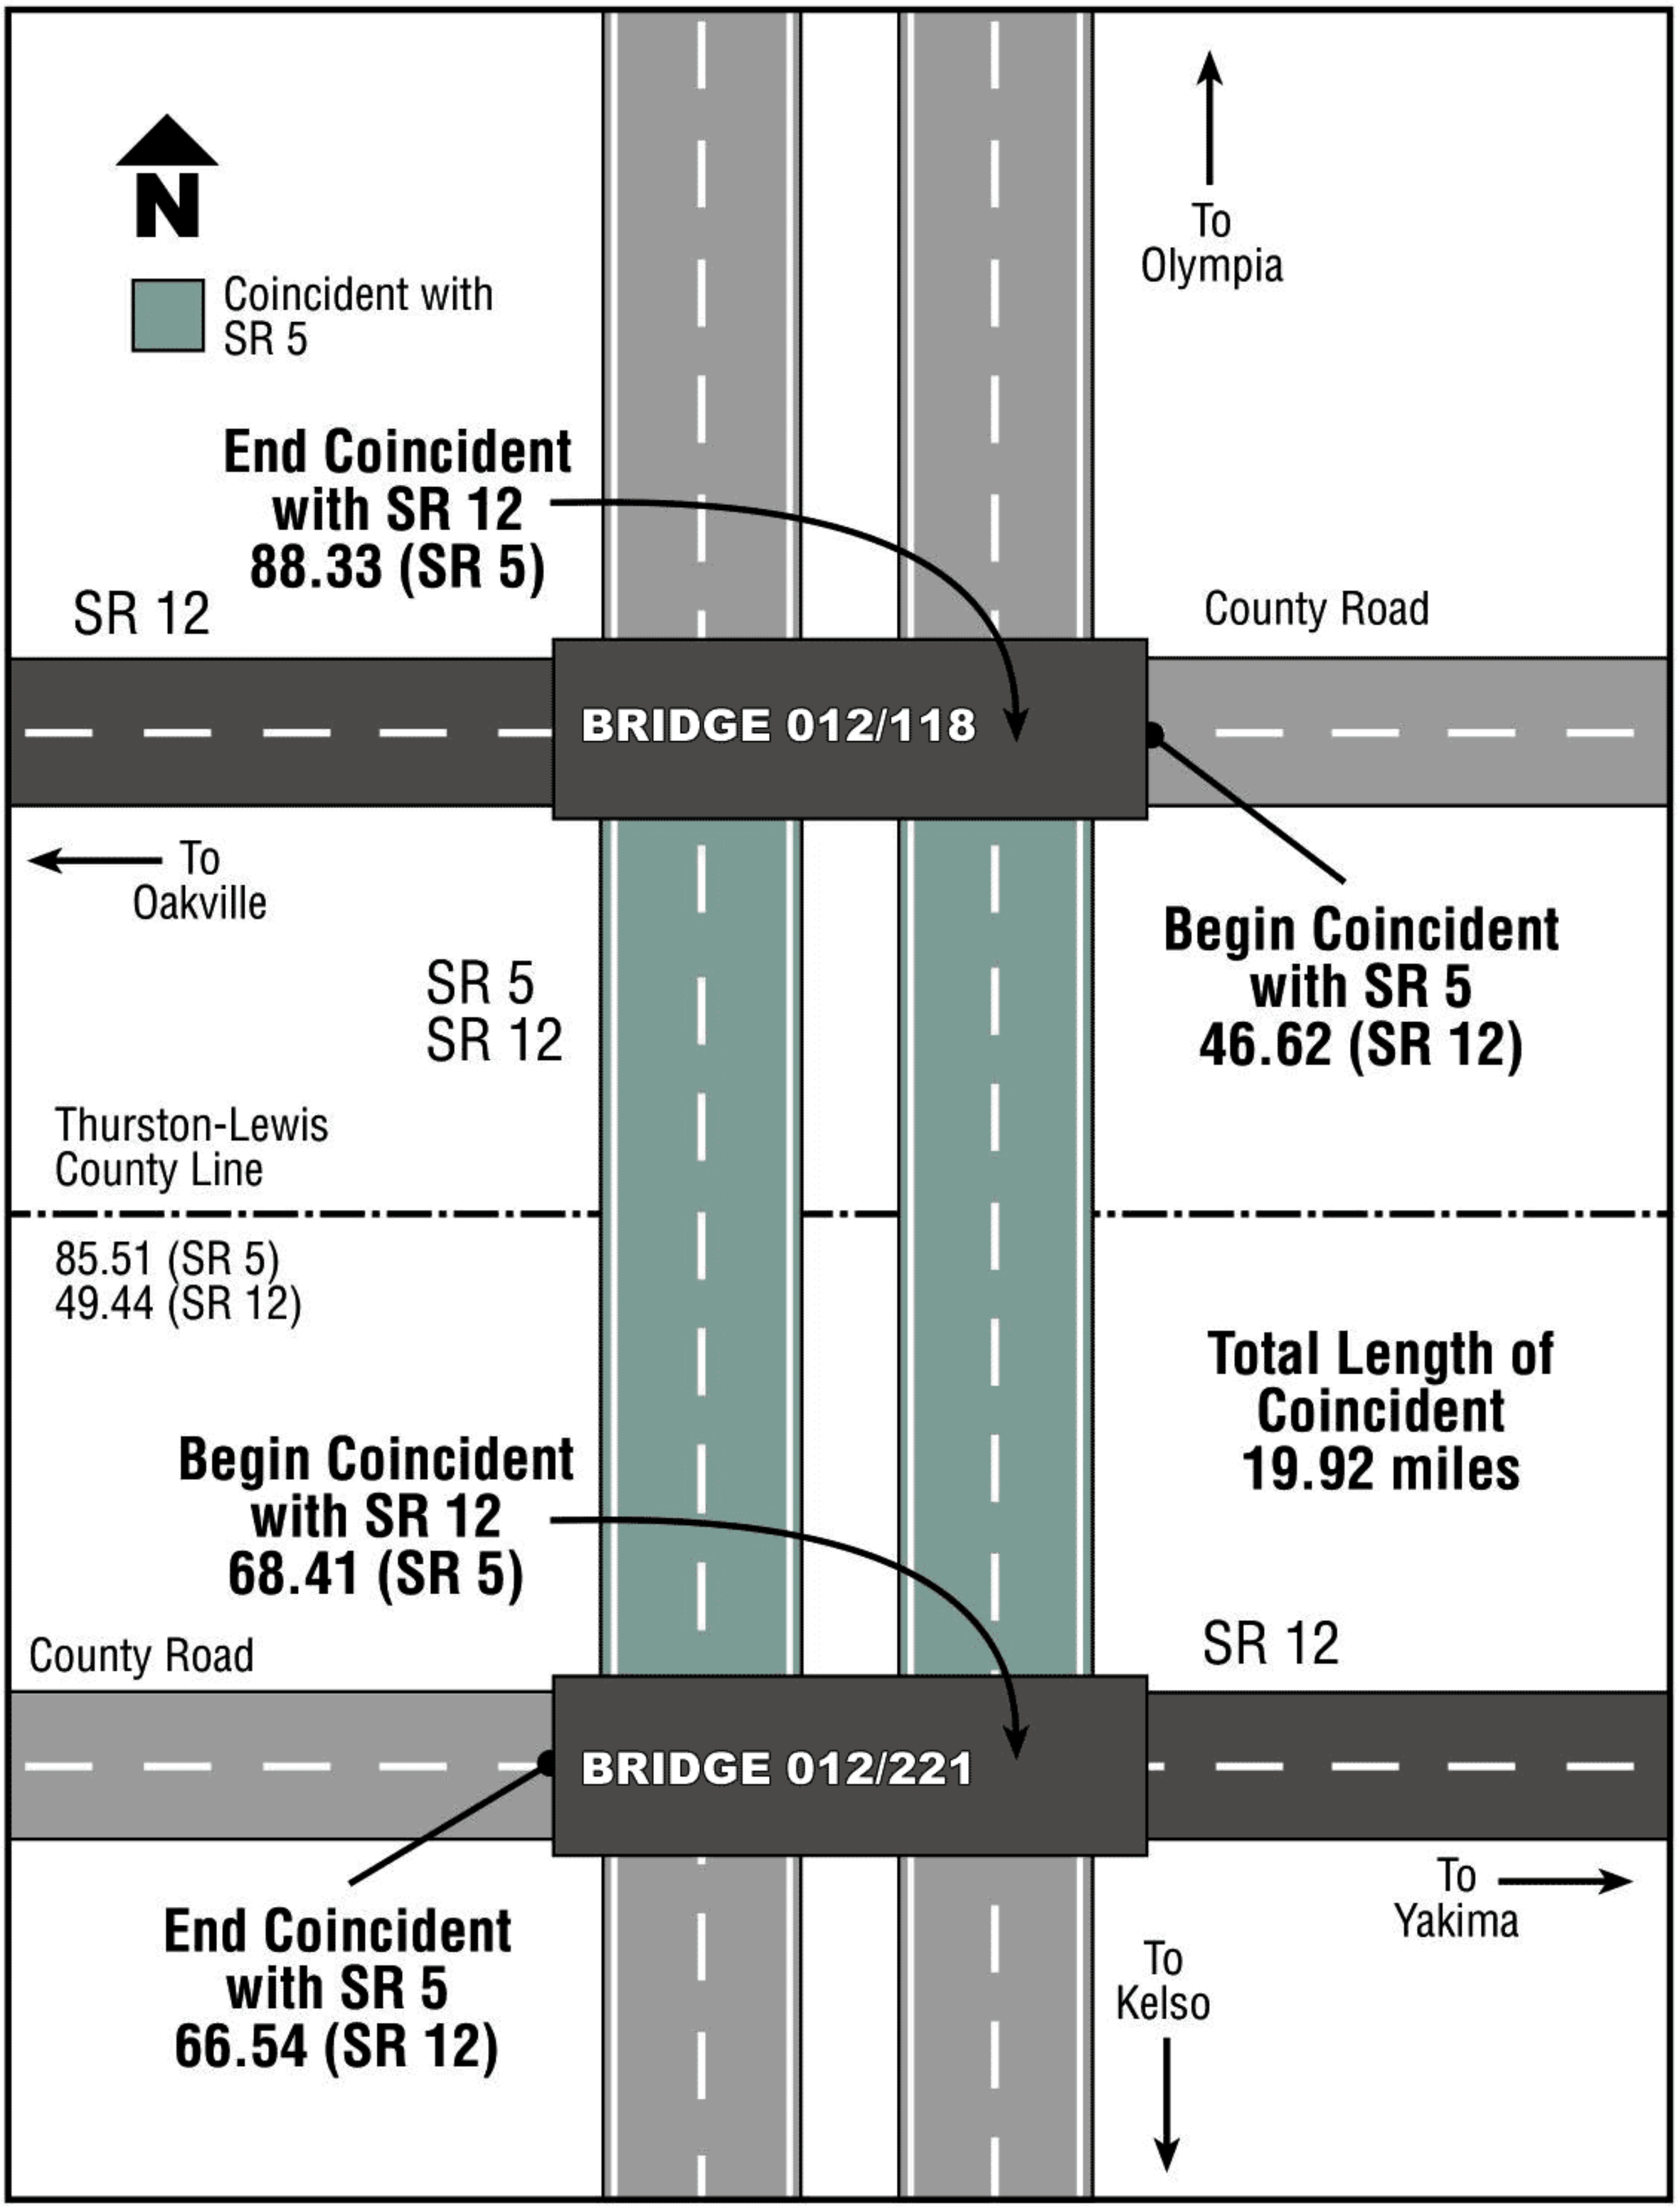
Divided Highway Measurements (Asphalt Surface w/Soil Median)

Refer to SR 90 SRMP 149.78 - 150.07



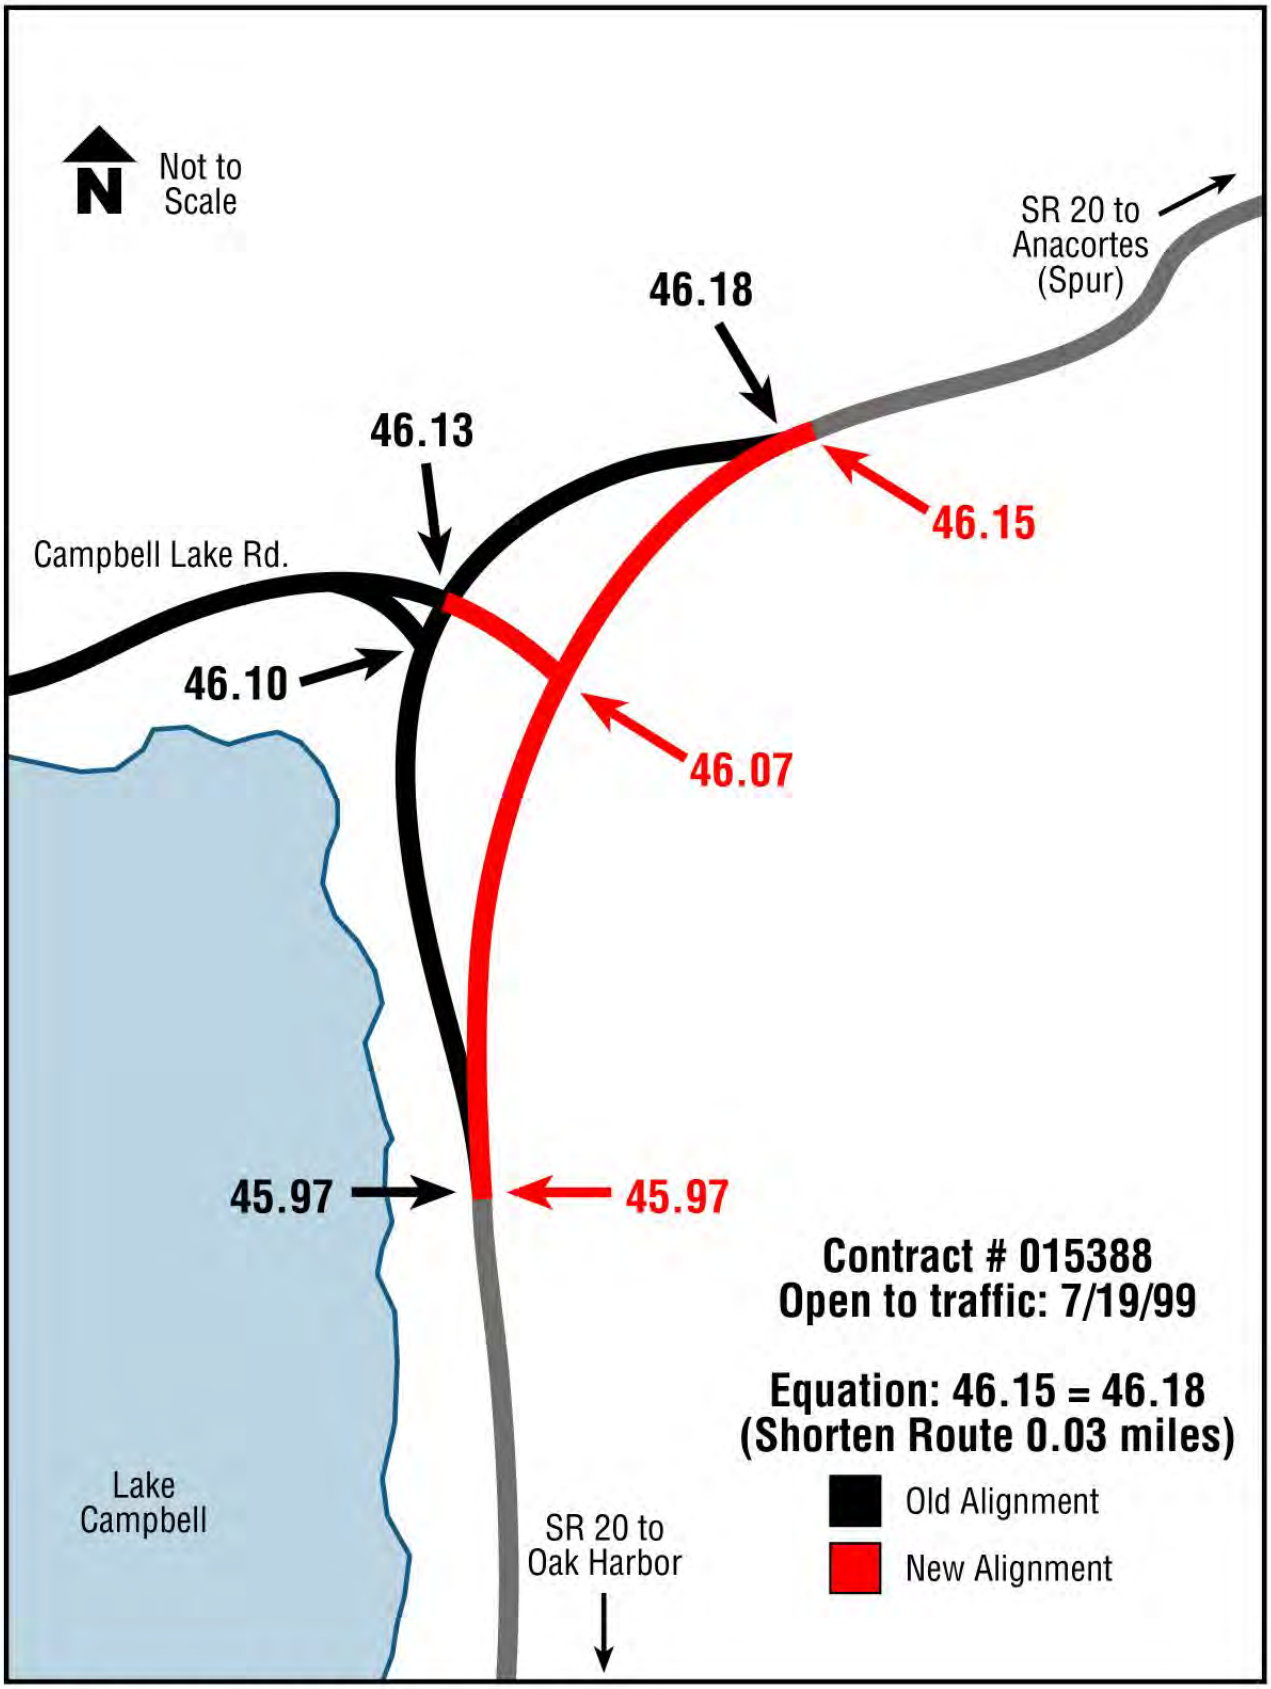
Physical Gap (Roadway Discontinuity)

Refer to SR 432 SRMP 7.62 - Vicinity



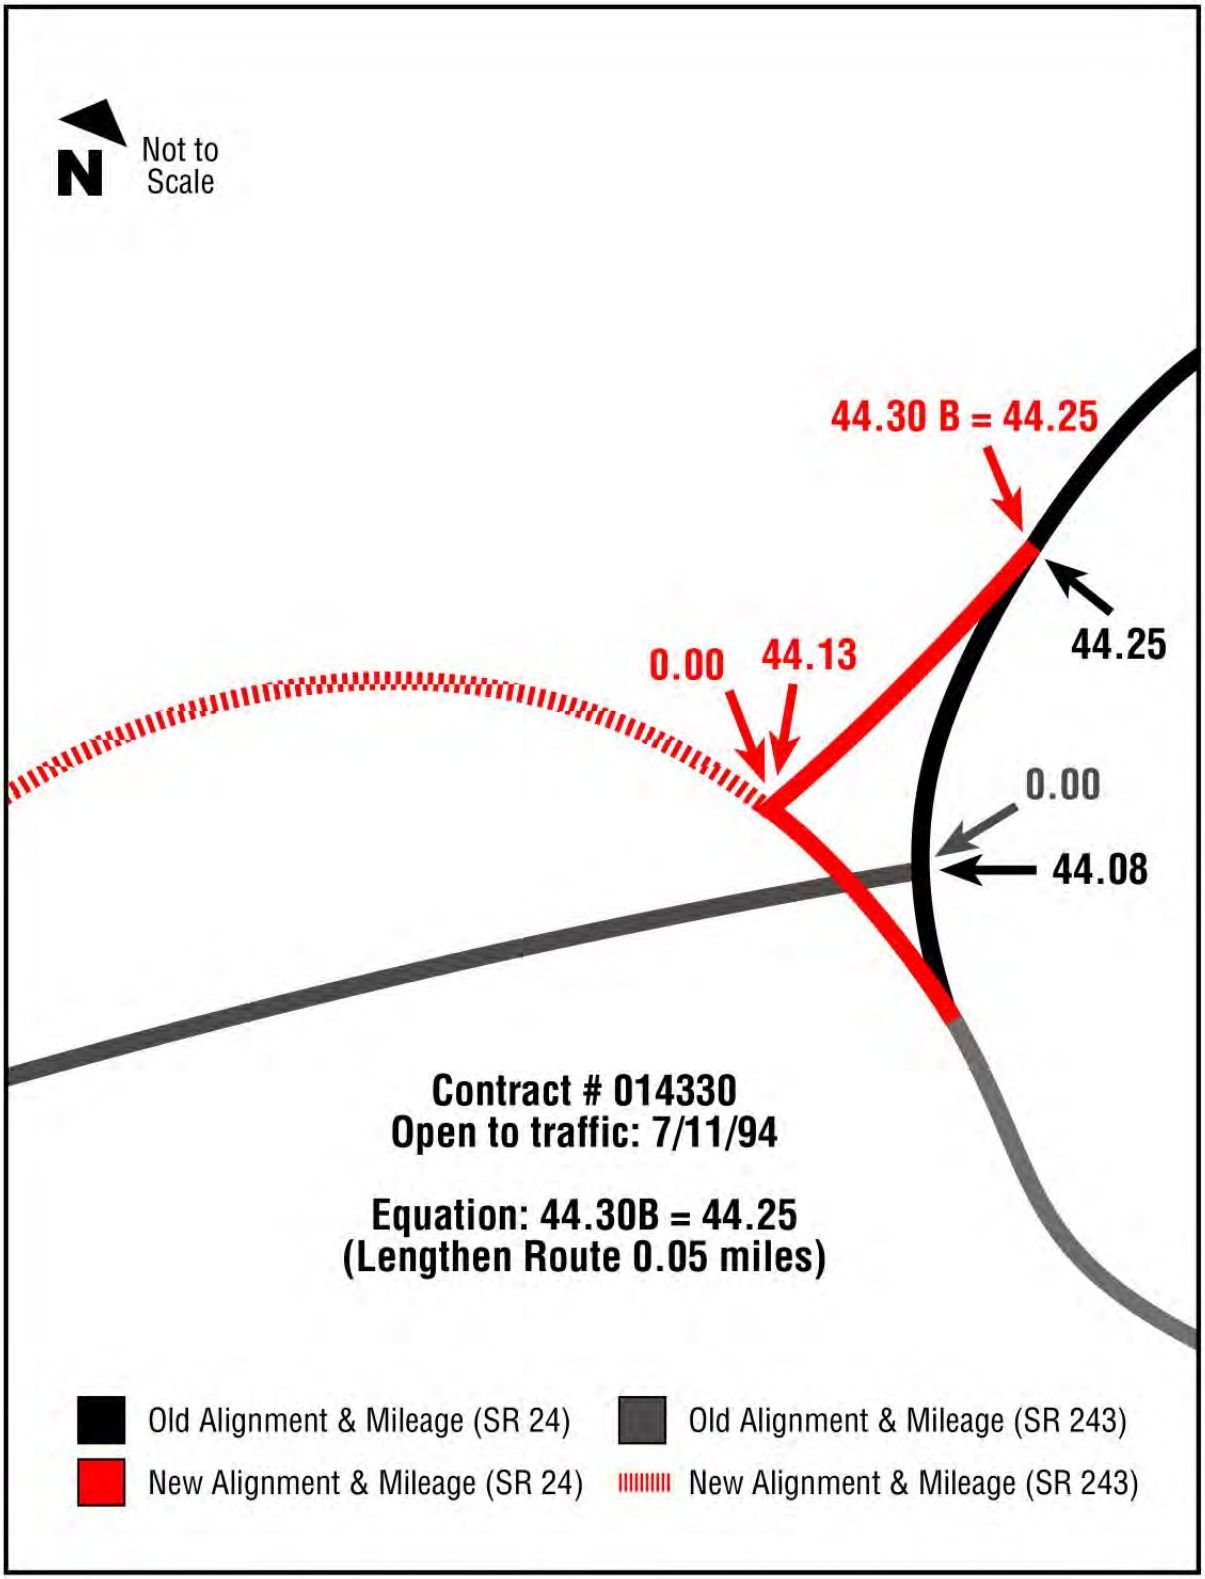
Coincident Route

Refer to SR 5 SRMP 68.41 - 88.33 and SR 12 46.62 - 66.54



Realignment - Shorten Route

Refer to SR 20 SRMP 45.97 - Vicinity



Realignment - Lengthen Route

Refer to SR 24 SRMP 44.08 - Vicinity
