APPENDIX B

WSF TAZ/District Systems

APPENDIX B WSF TAZ/DISTRICT SYSTEMS

TAZ System Development

The Transportation Analysis Zone (TAZ) system used for this study was largely adapted from the existing Puget Sound Regional Council (PSRC) TAZ system. Specifically, the PSRC TAZ boundaries were adopted for counties within the PSRC region (King, Pierce, Snohomish, and Kitsap Counties). The 2010 PSRC 938-zone system was used for this analysis. Zones external to the PSRC TAZ system in the eight outlying counties (Clallam, Jefferson, Island, Mason, San Juan, Skagit, Thurston, and Whatcom) were sized and developed to reflect concentrations of activities (e.g., population) within each county. The process of developing the Washington State Ferries (WSF) TAZ system involved the following:

- Using updated model zone systems from Thurston and Whatcom Counties
- Applying previous year model zones in other regions that were based upon:
  - Clustering tracts with similar population densities (e.g., tracts that form the City of Olympia, although not necessarily following the exact boundary of the city)
  - Geographic divisions (e.g., West Clallam County, Central Clallam County, and East Clallam County)
  - Creating one analysis zone per San Juan Island ferry terminal (i.e., Anacortes, Lopez, San Juan, Shaw, Orcas)

Finally, external TAZs were created to represent areas in Washington State but outside of the study area, other states in the U.S., and certain parts of British Columbia, Canada.

Geocoded home, origin, and destination addresses were assigned to the WSF TAZ system using a spatial join in ArcGIS. This is an automated GIS function that locates each geocoded address on the TAZ map and assigns the appropriate TAZ number to that record. For those addresses located outside of the study area, external TAZs were assigned using a rough estimate of external zone geography.

Table 1 shows the WSF model zonal system.

Table 1. Washington State Ferries model zonal system

Zone Number	Zone Type	Area Coverage
1-530	King County	Internal
531-671	Snohomish County	Internal

1301-1400		"Dummy" Zones for Ferry

System and Route-specific District Schemes

TAZs were aggregated into districts for purposes of analyzing and presenting survey results. Although a general district scheme for the entire system was developed, emphasis was placed on developing route-specific district schemes for travel analysis presentation at the route level. The route-specific districts were sized with the intention of providing more detail closer to the route's ferry terminals. Table 2 shows TAZ-to-district equivalencies for the system and route-specific district schemes. The district definitions from 2006 were generally applied, with updates for changes to underlying TAZ boundaries and splitting of large "all other places" zones into east and west zones.
