State Highway Log

Planning Report
2000

SR 2 to SR 971

Washington State Department of Transportation
Planning and Programming Service Center

I N T R O D U C T I O N

The Washington State Department of Transportation is responsible for the administration of over 7000 miles of State Highways. This involves large expenditures for planning, design, construction, and maintenance which necessitate having reliable geometric data for the entire State Highway System.

The Roadway Data Section of the Planning and Programming Service Center provides roadway geometrics in several reports. These include the STATE HIGHWAY LOG, the Road Life Report, the Horizontal and Vertical Alignment Report, and the Classification Log. Portions of these and other reports can be accessed on remote terminals through the TRIPS (TRansportation Information and Planning Support).

The STATE HIGHWAY LOG, which is published annually from TRIPS, contains roadway data and mileage statistics for all State Highways. It is designed to provide a record of current highway system information and a source for computing distances between major points. Detailed explanations of all fields are included starting on page "I-1", titled "State Highway Log Reference."

The Roadway Geometrics Office is responsible for updating and maintaining the roadway portion of the TRIPS system. The information TRIPS contains is provided by numerous WSDOT Regional, Headquarters and other sources. If you can provide us with updated information, find an error in the STATE HIGHWAY LOG or TRIPS, or have any questions regarding roadway data, please contact the Transportation Data Office at (360) 753-6597 or fax (360) 586-5855. We are continuously looking for sources to provide us with quality information.

Roadway data not available in this log may be found using the TRIPS system. Those using TRIPS for data retrieval are encouraged to follow the "TRIPS User's Guide." Anyone having questions relating to the TRIPS system or to schedule TRIPS training, contact TRIPS Maintenance and Coordination, (360) 753-5362 or fax (360) 586-5855.

STATE HIGHWAY LOG REFERENCE

Each State Route will be uniquely identified through the use of a related roadway type and qualifier. Related roadway types (RRT) are as follows: (Asterisk indicates RRT included in this publication)

*Mainline	*Spur	*Couplet
*Alternate Route	*Reversible Lane	Y-Connection
Collector-Distributor	Ramps	Proposed Route
Temporary Route	Transitional Turnback	Under Construction
Frontage Road	Ferry Ship (boat)	Ferry Terminal

Related roadway qualifiers (RRQ) describe related roadway types for a State Route. For example, Colfax (Spur), Kelso (couplet). For further information consult a TRIPS User Guide.

NOTE: The 1992 HIGHWAY LOG edition made reference to the Roadway Jurisdiction Transfer (RJT) TURNBACKS (effective 4/1/92). This 2000 HIGHWAY LOG edition does not make any reference to those RJT "Turn backs" (TB).

An example of a related roadway type and qualifier is shown on the SR 105 Spur in Westport:

STATE ROUTE =105
RELATED ROADWAY TYPE = SPUR
RELATED ROADWAY QUALIFIER = WESTPT

State Route Milepost (SRMP) identifies reference points and should not be used for computing distance. Accumulated Route Mileage (ARM) represents the actual miles of a section of roadway or route.

SRMP State Route Milepost - sequential number, in designated direction of travel, of 1/100 mile increments along a State Route.

B Indicates whether the milepost value is the ‘back’ duplicate of a milepost value ‘ahead’ on the route. Ahead values have an implied ‘A’ (blank).

ARM The route mile accumulated from the beginning of a State Route in the direction of the roadway.

FEATURE Following is a list of how some of the features are entered in the “feature” column:
