PEAK HOUR REPORT FOR 2007

INTRODUCTION:

The Washington State Department of Transportation is responsible for over seven thousand miles of state highways. This responsibility creates large expenditures for designing, planning, constructing and maintaining. It requires reliable data collection and reporting of vehicle volumes, classification types, speeds, travel trends and highest volume-hours throughout the state.

The Peak Hour Report is a compilation of multi-directional data containing the top volume-hours for the year at the Automated Data Collection sites around the State of Washington. The report summarizes the top two hundred **volume-hours** for the year by site and by direction on any given state highway.
The Peak Hour report is used as a tool for estimating future **design hour volume** of traffic. This information is used by traffic, design, planning and other engineers design highway features.
Typically the "K-30" & "K-100" (30th and 100th peak hour factors) are reported to engineering for highway design, however the "K-50" and "K200" are included within this report, which in past years were only given if the site was determined to be a recreational thoroughfare. Also, this report includes the "D" factor, which represents the proportion of peak hour traffic traveling in the peak direction (Please see Glossary for explanation of the different types of "K-factors").

Questions or Comments regarding the Peak Hour Report, please contact the Automated Data Collection Section by "E"mail ---- tdoadc@wsdot.wa.gov ---- or call 360-570-2392

EXECUTIVE SUMMARY

The Peak Hour Report is a list of Design Hour Factors (K and D) calculated from and including the highest 200 hours of hourly traffic volume collected from Automated Data Collection (ADC) sites being monitored during the previous complete year.

This years report is comparable to years past. It shows the Annual Average Daily Traffic (AADT) volumes in normal growth trends. It also shows where volumes of traffic are causing congestion within rural and urban areas around the state.

Typically each site is represented with two graphs within the site data section of this report.
The first of the two graphs--K FOR PEAK 200 HOURS of 2007--represents the top two hundred hours in descending order. (As volumes increase, the "K" value decreases).
The second of the two graphs--D % IN THE PEAK 200 HOURS of 2007--represents the highest directional difference order.

If there is not a graph showing the "D-factor" percentage, this is due to the fact that no data was available for the opposing direction of travel at that particular site.

K Factors = A peak hour traffic volume divided by the Annual Average Daily Traffic (AADT) for each ADC location, without regard to direction, i.e.

K Factor = Highest Peak Hour-- traffic volume hour divided by the AADT.
K30 Factor = 30th Peak Hour-- traffic volume hour divided by the AADT.

D Factor = Highest directional volume percentage for the 30th peak hour.
D Factors for all other peak hours are available by request.

COMMON USES:

- Peak Hour report assists in determining traffic patterns
- Peak Hour Report assists in determining projected and estimated traffic volumes
- Peak Hour Report assists in project design purposes by planning and engineering offices. (State, County, City and private)

GLOSSARY

ADC…….**Automated Data Collection**

ADT……..…**Average Daily Traffic**
(An average 24-hour traffic volume at a given location for some period of time less than a year. An ADT may be measured for six months, a season, a month, a week, or as little as two days. An ADT is a valid number for only the period over which it was measured.)

AADT……..**Annual Average Daily Traffic**
(The average 24-hour traffic volume at a given location over a full 365-day year—that is, the total number of vehicles passing the site in a year divided by 365.)

PEAK HOUR……...Highest recorded volume hours for the year

K FACTOR……..…The proportion of daily traffic occurring during the peak hour, (Expressed as a decimal)

K 30 FACTOR……..The proportion of daily traffic occurring during the 30th peak hour (Expressed as decimal)

K 50 FACTOR……..…The proportion of daily traffic occurring during the 50th peak hour (Expressed as a decimal)

K 100 FACTOR……...The proportion of daily traffic occurring during the 100th peak hour (Expressed as a decimal)

K 200 FACTOR……...The proportion of daily traffic occurring during the 200th peak hour (Expressed as a decimal)

D FACTOR……The proportion of peak-hour traffic traveling in the peak direction (Expressed as a decimal)

DDHV……....Directional design hour volume
