PEAK HOUR REPORT FOR 2001

INTRODUCTION:

The Washington State Department of Transportation is responsible for over seven thousand miles of roads within the state creating large expenditures for designing, planning, construction and maintenance. It requires reliable data collection and reporting of vehicle volumes, classification types, speeds, travel trends and highest volume-hours throughout the state.

The Peak Hour Report is a compilation of multi-directional data containing the top volume-hours for the year at the Automated Data Collection sites around the State of Washington. The report summarizes the top one hundred **volume-hours** (two hundred hours if the site is considered a "Recreation" site) for the year by site and by direction on any given highway within the state.
The Peak Hour report is used as a tool for estimating future **design hour volume** of traffic, so as to design highway features by Traffic Design Offices, Planning Offices, and Engineers.
Typically the "K-30" & "K-100" (30th and 100th peak hour factors) are reported to engineering for highway design. The "K-50" and "K200" are reported for sites that have been determined to be a recreational thoroughfare. (Please see Glossary for explanation of the different types of "K-factors").

For the "K-factors" by direction or for the "K-50" and "K-200" for each site: Please contact the office below.
Questions or Comments regarding the Peak Hour Report, please contact the Automated Data Collection Office by "E"mail ---- tdoadc@wsdot.wa.gov ---- or call 360-570-2392

EXECUTIVE SUMMARY

The 2001 Peak Hour Report is comprised of lists that show the top one or two hundred volume hours at each site within a given year.

This years report is comparable to years past. It shows the Annual Daily Traffic volumes in normal growth trends. It also shows where volumes of traffic are causing congestion within rural and urban areas around the state.

Typically each site is represented with a two graphs within the site data section of this report.
The first of the two graphs--K FOR PEAK 100 HOURS OF 2001--represents the top one hundred hours in descending order. (As volumes increase the "K-value" decreases).
The second of the two graphs--D % IN THE PEAK 100 HOURS OF 2001--represents the highest directional difference order.

If there is not a graph showing the "D-factor" percentage, this is due to the fact that no data was available for the opposing direction of travel at that particular site.

GLOSSARY

ADC…….**Automated Data Collection**

ADT……..…**Average Daily Traffic**
(An average 24-hour traffic volume at a given location for some period of time less than a year. An ADT may be measured for six months, a season, a month, a week, or as little as two days. An ADT is a valid number for only the period over which it was measured.)

AADT……..**Annual Average Daily Traffic**
(The average 24-hour traffic volume at a given location over a full 365-day year—that is, the total number of vehicles passing the site in a year divided by 365.)

PEAK HOUR……...Highest recorded volume hours for the year

K FACTOR……..…The proportion of daily traffic occurring during the peak hour, (Expressed as a decimal)

K 30 FACTOR……..The proportion of daily traffic occurring during the 30th peak hour (Expressed as decimal)

K 50 FACTOR……..…The proportion of daily traffic occurring during the 50th peak hour (Expressed as a decimal)

K 100 FACTOR……...The proportion of daily traffic occurring during the 100th peak hour (Expressed as a decimal)

K 200 FACTOR……...The proportion of daily traffic occurring during the 200th peak hour (Expressed as a decimal)

D FACTOR……The proportion of peak-hour traffic traveling in the peak direction (Expressed as a decimal)

DDHV……....Directional design hour volume
