1984 ANNUAL TRAFFIC REPORT

Washington State Department of Transportation
Planning, Research and Public Transportation Division
In cooperation with
U. S. Department of Transportation, Federal Highway Administration

INTRODUCTION

The Washington State Department of Transportation is responsible for the administration of approximately 7,000 miles of roads that involve large expenditures annually for planning, design, construction, and maintenance. This necessitates having reliable and current traffic volume data, vehicle type classification, and travel statistics throughout the state.

This report contains Annual Average Daily Traffic (AADT) volumes for the years 1981 through 1984. The AADT Volumes are included only at locations where actual traffic counts have been conducted in one or more of the last four years. Traffic volumes shown in this report should be used only as an indication of yearly trends. Traffic data for design purposes should be obtained through specific traffic analysis requests.

The percentage of trucks in the traffic stream is of major importance for design purposes. Truck percentage data in this report is based on four or six hour manual classification counts at specific locations throughout the state. This data reflects only the percentage of trucks during those periods and should not be construed as an annual truck percentage for that location. Truck percentages are separated into two types, single units and combinations. Single units consist of two and three axle trucks and buses. Combinations include all trucks with trailers or trailer combinations. Truck percentage data in this report should be used only as an indication of yearly trends. Truck traffic data for design purposes should be obtained through specific traffic analysis requests.

Included in the foreword section of this report are summaries of historical data at permanent traffic recorder locations, toll ferries, and bridges for 1975 and 1984. Also, included on the back inside cover of this report is a copy of the 1984 Washington State Traffic Flow Map.

There are some state routes that involve one-way couplets. Because couplets are difficult to describe, the routes are also shown in sketch form in the back of the report. Three of the areas involved are as follows: Aberdeen, Centralia, and Port Angeles.

Also shown in the report at each location is the functional class of the highway.

1. Principal
2. Minor Arterial
3. Major Collector
4. Interstate

COLLECTION AND PROCESSING OF DATA

A traffic count is the number of vehicles that pass a given point during a specific period of time. These vehicles may be recorded by either manual tally or a mechanical counter. In this report the volumes shown represent an estimate of the average day of the year.

During 1984 there were 70 automatic traffic recorders monitoring traffic throughout the state on a continuous basis. Location descriptions of these recorders are listed on page II of this report. The approximate locations of these recorders are shown on the maps on pages III and IV, and also on the Traffic Flow Map in the back of the book. (Data collected at these locations is used in the development of AADTs from mechanical counts of 48 or 72 hour duration, and in the calculation of seasonal traffic variations.) Some of the 70 locations are new or have been recently relocated. Where data is available for all of 1984, the locations are listed in the average Monthly Traffic Volumes and Conversion Factors sections of the report.

An asterisk placed beside a traffic volume designates an actual traffic count factored to an AADT. All other volumes shown in this report are estimates based on traffic counts made in other years and factored to an AADT using permanent automatic traffic recorder patterns. Blank areas in the traffic volume portion indicate no traffic volume data is available.

Inquiries relating to traffic should be directed to the Transportation Data Office (753-6086 or 753-6234).

JAMES P. TOOHEY
Assistant Secretary
Planning, Research, and
Public Transportation
