BELLEVUE, WA. 98004

Dear Ms. Ray;

We want to go on record as to the constantly increasing levels of noise we have to address here in Woodcrest. Freeway traffic noise has significantly increased every year in our senior development. Normal conversation outside the homes in some areas requires the people trying to talk to practically shout to be heard.

A lot of us have to close the windows to shut out the traffic noise, especially at the peak hours. Incidentally, those peak hours have increased too. Afternoons they can start as early as 2-3 pm. Many of us close the windows in the early hours (4-7) in order to keep from waking to the racket.

We need to have serious consideration as to how the new widening of I-405 will address the noise abatement. Many of us do not feel that concrete walls will make much difference. But, we do feel that if a strong line of native N.W. Pine trees were planted soon, along our property line that by the time you move the new widened highway closer to our property we might get some relief.

We suggest that this planting should be done between our West property line and the East side of the widened highway. Please keep us informed of any meetings so we can make some input at every step along the way.

sincerely;

Dear Ms. Ray;

We want to go on record as to the constantly increasing levels of noise we have to address here in Woodcrest. Freeway traffic noise has significantly increased every year in our senior development. Normal conversation outside the homes in some areas requires the people trying to talk to practically shout to be heard.

A lot of us have to close the windows to shut out the traffic noise, especially at the peak hours. Incidentally, those peak hours have increased too. Afternoons they can start as early as 2-3 pm. Many of us close the windows in the early hours (4-7) in order to keep from waking to the racket.

We need to have serious consideration as to how the new widening of I-405 will address the noise abatement. Many of us do not feel that concrete walls will make much difference. But, we do feel that if a strong line of native N.W. Pine trees were planted soon, along our property line that by the time you move the new widened highway closer to our property we might get some relief.

We suggest that this planting should be done between our West property line and the East side of the widened highway. Please keep us informed of any meetings so we can make some input at every step along the way.

sincerely;
