

## README.TXT

### INSTALLING AND RUNNING EVERFE

EverFE is currently available for windows 95/NT, and for Sun Sparc systems. EverFE version 1.02 for WINDOWS 95/NT is included in this distribution.

### WINDOWS 95/NT INSTRUCTIONS

EverFE is distributed as a self-extracting ZIP archive. To install, follow these steps:

- o Run the file "everfe102.exe" by double-clicking or choosing "Start" and then "Run" from the Task Bar.
- o By default, EverFE will install itself in the "C:\Program Files\EverFE<version>" directory. You may provide a different location if you wish.
- o Once the program has uncompressed itself, go to the EverFE root directory, and double click on the file "everfe.bat" to start the program.
- o If you wish, you may modify the properties of the batch file; "Run in minimized window" and "Close on exit" will keep the DOS window from cluttering your desktop and toolbar.

### SUN SPARC INSTRUCTIONS

EverFE is distributed as a gzipped TAR archive. To install, follow these steps:

- o Download the current version from the web site.
- o Uncompress the archive with "gunzip everfe.tar.gz" or some equivalent command.
- o Extract the tar archive with "tar xvf everfe.tar" or some equivalent command.
- o If you wish, you may now delete the tar archive to free up disk space.
- o Go to the EverFE root directory and type "everfe.csh" to run the program.
