

## Enumclaw Segment: 228th Avenue SE to SR 410

**What does this segment look like today?**  
One lane in each direction; a few left turn lanes; center turning lane for 1/2 mile.

**228th Avenue SE**

**SR 410**

### What are the problems?

**Safety:** A major portion of this segment is part of a high accident corridor. There are some angled intersections that pose safety issues for vehicles entering and exiting the highway. Street lighting and visibility problems have also been identified.

**Safety & Traffic Backups:** Vehicles stopping to make left turns at points on the road without left turn lanes create traffic backups and safety concerns. School buses making frequent stops create vehicle backups. Unmarked crosswalks and children walking to and from the school bus create pedestrian safety concerns.
