

## What's the Problem?

- SR 167 is overwhelmed with traffic. Commuters and freight haulers often experience stop-and-go traffic for up to six hours a day.
- Increasing congestion negatively affects our economy and quality of life.

## What Will the Corridor Plan Tell Us?

- Identify the current and future demand, anticipated growth, and economic development of the corridor.
- Evaluate how different corridor strategies and investments will meet future traffic demand.
- Recommend packages of short-term projects to improve safety, traffic flow and freight movement.
