

## Transportation

### Truck traffic in Grays Harbor

- The Aberdeen Log Yard site haul route would require using fewer city streets to reach US 101 than the Anderson & Middleton site haul route.
- Most truck trips will be to and from east of the project site.
- Fewer truck trips are expected with the Kiewit-General concept. The Kiewit-General concept has reduced construction time for the site.
- Truck trip estimates are based on truck-only transport. WSDOT could consider rail and barge for transporting materials during construction and operation to reduce the number of truck trips.

### Community coordination and outreach

- We will work with the design-build contractor to keep community members and business owners informed as the construction traffic management plan is developed.
