# Fuel Taxes: A State-by-State Comparison

Fuel Taxes: A State-by-State Comparison is published with the intent to assess and compare Washington's motor fuel tax to that of the other 49 states and the District of Columbia. Throughout the country, state and local governments impose a variety of cents-per-gallon taxes and taxes based on the retail or wholesale price of fuel. Some states also impose environmental or business taxes that translate into cents-per-gallon charges at the pump. To determine how Washington compares to the other states in the nation, the Washington State Department of Transportation semi-annually analyzes data from other states to learn what taxes are imposed on fuel used by cars and trucks traveling on the nation's roads.

This report covers the period from January 1, 2011, through June 30, 2011. The average cost of fuel increased during this time period. Since our last report (December 2010) the nation's average cost of fuel increased by 73 cents resulting in upward changes to states with applicable sales tax or variable tax rates.

Washington ranked 6th among the 50 states and the District of Columbia for combined state and local gasoline taxes for the first half of 2011. A majority of the states (24) have combined fuel tax rates that fall within the 20¢ to 30¢ range, twelve states fall into the 30¢ to 40¢ range, five states (Illinois, Connecticut, Hawaii, New York, California) are above 40¢ and the remaining ten have combined fuel tax rates under 20¢. The average state gasoline excise tax is 21.4¢ per gallon. The national average state and local gasoline tax rate for this six-month period is 27.1¢ per gallon. Washington's 37.6¢ tax rate is still lower than states with congestion problems similar to ours (Illinois 58.1¢, New York 44.9¢, and California, 44.9¢). Including the federal tax on gasoline, the nation-

wide average tax is 45.5¢ per gallon as of June 30, 2011.

The federal tax on gasoline is 18.4¢ per gallon for all states (last increase 1993). Federal and state taxes account for 12.7% of the average pump price of gasoline in the nation during the first half of 2011 and 15.0% of the average pump price of gasoline in Washington during the same period of time.

## The Impact of the Combined State and Federal Motor Fuel Tax Rates at the Pump

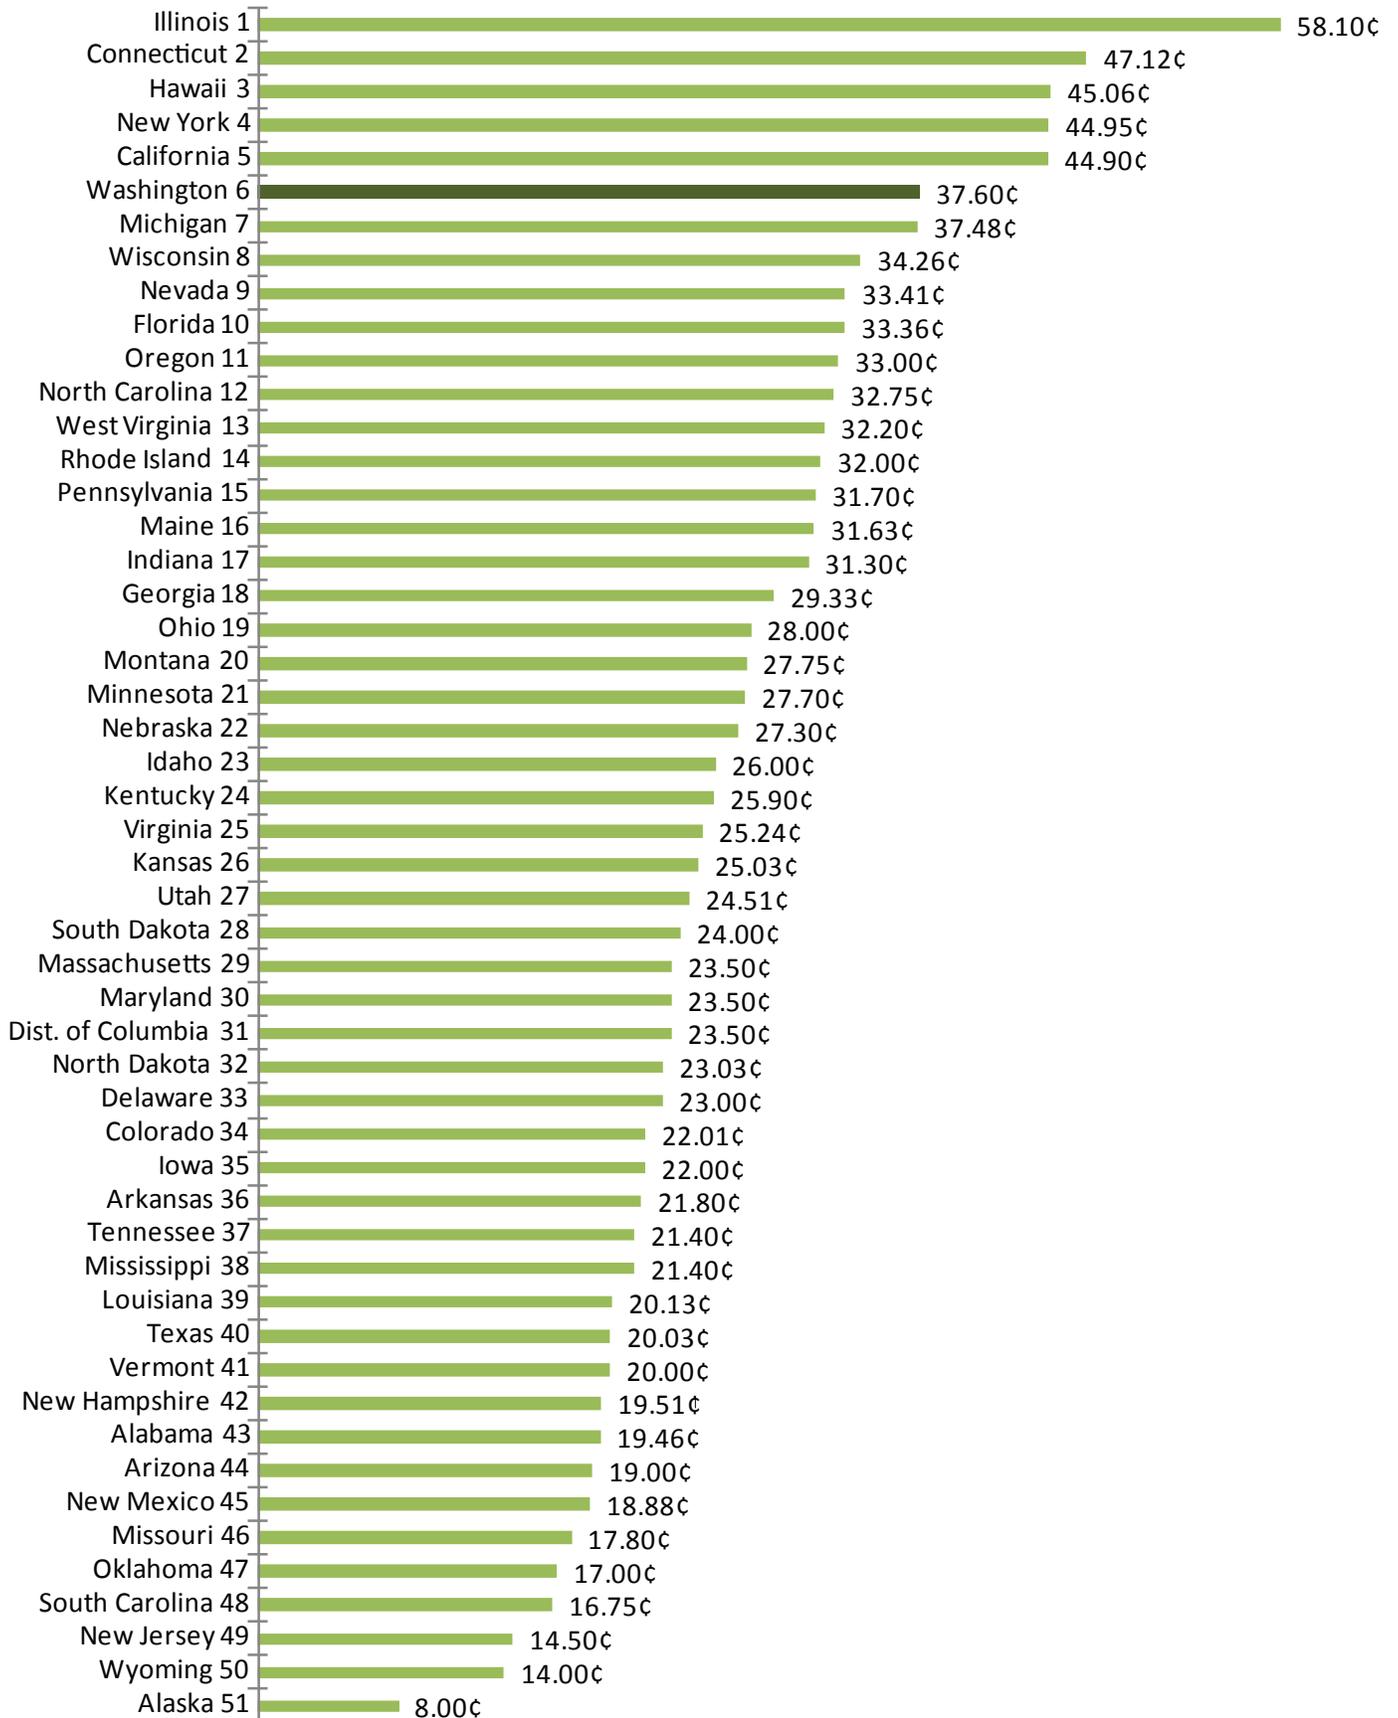

(dollars per gallon)

	Washington	United States
Average Retail Price of Gasoline	\$3.73	\$3.59
Average Motor Fuel Tax Rate (Including Federal Gas Tax of 18.4¢)	\$0.56	\$0.45
Motor Fuel Tax as a Percentage of the Retail Price of Gasoline	15.0%	12.7%

Source: The U.S. Energy Information Administration motor fuel prices for the period of January 2011-June 2011.

The information in this report is gathered from the Commerce Clearing House (CCH) State Tax Guide, Statute Summaries. In addition, data was supplemented with information supplied by individual states, official DOT web sites and telephone interviews with officials in selected states.

## State by State Combined State and Local Gas Tax Rate Comparison January 1, 2011 through June 30, 2011

# Appendix

## Guide to the Tables

Several tables are presented in this report that delineate the states' rankings. Gasoline and diesel taxes for each state are displayed in tables A and C, respectively. The tax information in each of these tables is stratified into seven columns by the following categories:

### Columns A1 and C1: Federal Taxes

These columns show the sum of the federal excise taxes on gasoline and diesel fuel.

### Columns A2 and C2: State Excise Tax

These columns show state excise taxes on gasoline and diesel fuel.

### Columns A3 and C3: Sales and Use Tax Percentage Rates

These columns show state and local sales and use taxes as a percentage of the price of fuel. These columns also contain taxes levied on the retail or wholesale price of fuel. Locally imposed sales taxes were included since these are often collected by state agencies and, in some states, are so widely imposed that they uniformly and substantially raise the sales tax rates statewide.

### Columns A4 and C4: Sales, Use, and Other Business Taxes in Cents-Per-Gallon

These columns show state and local sales and use taxes as a rate of cents-per-gallon calculated using the tax rate from column A3.

### Columns A5 and C5: Other State Taxes

These columns show other state taxes including inspection, environmental fees such as underground storage and discharge fees, import and miscellaneous post-production taxes on petroleum products.

### Columns A6 and C6: Local Excise Taxes

These columns show all taxes (other than sales taxes) levied locally at a cents-per-gallon rate.

### Columns A7 and C7: Total Taxes

These columns show the total rates for all federal, state, and local taxes on highway fuels.

Following each of the component tables are tables B and D, which show various rank orderings of the states based on the fuel taxes imposed. The stratification scheme for showing the relative ranking of the states was adopted to show the separate and combined impact of the federal, state and local taxes.

### Columns B1 and D1: State Excise Taxes Only

These columns show the rates normally cited as the state gas or diesel tax rates.

### Columns B2 and D2: State Excise and Other State Taxes Only

These columns rank the states by all state-imposed taxes except sales tax.

### Columns B3 and D3: All State and Local Taxes

These columns rank the states by all taxes imposed on highway fuel by state or local governments.

### Columns B4 and D4: All State, Federal, and Local Taxes

These are similar to columns B3 and D3, but include all federal taxes on highway fuel as well.

It is important to remember that this report is designed to show roughly what consumers are paying in fuel taxes in each state. It is not designed to indicate what other state governments are spending on roads.

While the gasoline tax tables are fairly straightforward, the diesel tables are complicated by the diversity of state tax structures. In most states, the diesel fuel tax is equivalent to the gasoline tax, so drivers of personal diesel-powered vehicles will pay at the same rate as other motorists. Diesel-powered commercial trucks, however, will often pay more; several states charge motor carriers through road taxes, fuel tax surcharges, or weight-mile taxes. In these states the motor carrier may be exempt from all or a portion of the fuel tax but will usually pay an equal or greater tax on road operations through one of these other taxes.

# Gasoline Tax Tables

---

The rates shown in this comparison do not fully depict what the states are collecting from users. Alaska, for example, has the lowest combined state and local fuel tax rates in the nation, and no state excise tax. It has no dedicated user fees; general fund appropriations account for a portion of the highway budget three times greater than revenues from motor fuel and motor carrier taxes. What cannot be shown on these tables are Alaska's oil production fees, which amount to a tax in every state on every user of petroleum products derived from Alaskan oil. Other oil-producing states have similar production and severance fees, which could be perceived as instruments for taxing users in other states.

**Table A: Fuel Tax Components**
