License plate transponder installation instructions for motorcycles

- The design of the windshield mounted transponder is not compatible with motorcycles. Therefore, motorcycles are provided external mounted transponders.
- On other vehicles, the external mounted transponder is attached to the front license plate using the license plate screws.
- Since motorcycles do not have front license plates, the transponder must be attached near the instrument panel at the front of the motorcycle.
- The transponder must be installed horizontally to ensure it is properly read and linked to your *Good To Go!* account.
- Motorcyclists will need to use plastic or wire ties to secure the transponder to the motorcycle.

Please contact the *Good To Go!* customer service center with any additional questions you might have.
