WHAT GOVERNMENT IS DOING

To address the immediate threat of landslides, WSDOT. BNSF, Sound Transit, local jurisdictions, and other public agencies are working together to prevent landslides.

FOR FURTHER INFORMATION

For residents in the cities of Everett. Mukilteo, and Shoreline, the town of Woodway and Snohomish County with questions on landslides, please contact your local planning department. For other regions, please visit the Department of Ecology website at: www.ecy.wa.gov/programs/sea/landslides/index.html or your local planning department.

or hard of hearing may make a request by calling the Washington State Relay at 711.

Title VI Statement to Public: It is the Washington State Department of Transportation's (WSDOT) policy to assure that no person shall, on the grounds of race, color, national origin or sex, as provided by Title VI of the Civil Rights Act of 1964, be excluded from participation in, be denied the benefits of, or be otherwise discriminated against under any of its federally funded wsdotada@wsdot.wa.gov or by calling toll free, programs and activities. Any person who believes his/her Title VI protection has been violated, 855-362-4ADA(4232), Persons who are deaf may file a complaint with WSDOT's Office of Equal Opportunity (OEO). For additional information regarding Title VI complaint procedures and/or information regarding our non-discrimination obligations, please contact OEO's Title VI Coordinators, George Laue at (509) 324-6018 or Jonte' Sulton at (360) 705-7082

How landslides affect your property

LANDSLIDES COST YOU

- Loss of property value
- Increased insurance costs
- Damage to building structures
- Loss of land
- Clean-up and repair costs
- Liability for damages to others' properties

LANDSLIDE FACTS

- More than 200 landslides have occurred in the last ten years along the Seattle to Everett coastline
- 80 percent of landslides are related to human activities, including poor slope management and drainage problems
- Since 2009, more than 800 trains have been cancelled due to landslides

MANAGING DRAINAGE

- When possible, direct drainage away from the bluff crest
- Talk to your local public works department before planning your water drainage system
- Build drainage systems in compliance with local standards
- Don't direct drain pipes onto steep slopes or the tops of slopes
- Where possible, connect your drainage with downslope drainage systems
- Seek professional help from geologists, engineers, and state and local agencies for questions and help

LANDSLIDE WARNING SIGNS

Property

- Bare soils, eroding slopes, cracks
- Mid-slope benches (level areas)
- Hummocky (mounding) and uneven ground
- Changes in roads, utilities, and buildings
- Sagging or taut utility lines
- Foundation separating/cracking
- Growing cracks in walls/windows
- Broken or leaking water or sewer lines
- Doors/windows not closing properly
- Significant cracking of concrete slabs and pavement

Vegetation

- Tilted or curved conifer trees
- Split trunks and stretched roots
- Large clusters of similar-aged trees (often alder)

Water

- Small ponds on benches of slopes
- Disrupted natural drainage
- Unusually heavy or muddy seepage
- Unusual increase or decrease in flow from springs

WHAT YOU CAN DO

Regular Maintenance

- Inspect plumbing and drains for leaks
- Don't dump garbage or yard debris on slopes
- Inspect and maintain underground drainage and sprinkler systems

Vegetation

- Consult your local planning department and a licensed geologist before removing vegetation from steep slopes
- Maintain and retain native vegetation and ground cover on slopes (replant if bare)

Drainage

- Don't discharge water over steep slopes
- Don't irrigate or put septic drain fields above slopes
- Don't change natural drainage
- Collect surface water from gutters and driveways and drain away from slopes

Helpful Tips

- Landslides from slopes and bluffs can be started by:
 - Placement of unstable fill
 - Placement of debris, such as yard waste
 - Cutting or grading
 - Cutting into the bottom of the slope
 - Discharging water from broken pipes or storm drains
- Use maximum construction setbacks on steep slopes/bluffs
