

Auburn Segment: SR 18 Interchange to Noble Court SE

SR 18 Interchange

Noble Court SE

What does this segment look like today?

One and two lanes in each direction; one center turn lane.

What are the problems?

Congestion: This segment experiences heavy congestion westbound during the AM commute and eastbound during the PM commute.

Safety: A major portion of this segment is part of a high accident corridor, including spot locations and two pedestrian accident locations. Rear end collisions involving vehicles entering and exiting driveways are the most common accidents. Street lighting and visibility problems have also been identified.

Safety & Traffic Backups: School buses making frequent stops create vehicle backups. Unmarked crosswalks and children walking to and from the school bus also create pedestrian safety concerns.
