Operating the SR 99 tunneling machine

*Chris Bambridge, Alaskan Way Viaduct Replacement Program
Tunnel Design Engineer*

6 to 7 p.m.

Bertha, the world's largest tunneling machine, is currently being assembled in the SR 99 tunnel launch pit near Seattle's stadiums. Join us for this month's speaker series to find out next steps as crews test the machine and prepare to begin tunneling. You'll also learn about some of the technological advances on the SR 99 tunneling machine, including how a 300-foot-long machine steers underground and what happens when the massive steel cutters on the front of the machine need to be changed.

Free parking is available for First Thursday art walk patrons in Pioneer Square.
Visit www.FirstThursdaySeattle.com for more information about participating garages.
