E&EP Geotechnical Division, MS 47365

SUBJECT: SR-5, MP 87.5 to MP 95.6, OL-3451  
Grand Mound to Maytown Widening  
Addendum 1 to the Final Geotechnical Report

As requested, we have reviewed steepening the new fill slopes to 1.75H:1V between Stations 717+50 and 718+50 Right. It is our understanding, the original 2H:1V slopes may encroach upon an adjacent stream in this area. The new fill should be stable with 1.75H:1V slopes provided that the fill is constructed of select borrow or gravel borrow, and hillside terraces are used as required under Section 2-03.3(14) in the Standard Specifications.
