

1 (December 6, 2004)
2 The project area potentially contains archaeological or historical objects that may
3 have significance from a historical or scientific standpoint. To protect these objects
4 from damage or destruction, the Contracting Agency, at its discretion and expense,
5 may monitor the Contractor's operations, conduct various site testing and perform
6 recovery and removal of such objects when necessary.
7
8 The Contractor may be required to conduct its operations in a manner that will
9 accommodate such activities, including the reserving of portions of the work area
10 for site testing, exploratory operations and recovery and removal of such objects as
11 directed by the Engineer. If such activities are performed by consultants retained
12 by the Contracting Agency, the Contractor shall provide them adequate access to
13 the project site.
14
15 Added work necessary to uncover, fence, dewater, or otherwise protect or assist in
16 such testing, exploratory operations and salvaging of the objects as ordered by the
17 Engineer shall be paid by force account as provided in Section 1-09.6. If the
18 discovery and salvaging activities require the Engineer to suspend the Contractor's
19 work, any adjustment in time will be determined by the Engineer pursuant to
20 Section 1-08.8.
21
22 To provide a common basis for all bidders, the Contracting Agency has entered an
23 amount for the item "Archaeological and Historical Salvage" in the Proposal to
24 become a part of the total bid by the Contractor.
