

1           **(November 17, 1997)**

2           ***Installing Guardrail Posts in Geosynthetic Reinforced Slopes***

3           The Contractor shall install guardrail posts as shown in the Plans after completing the  
4           reinforced slopes. The Contractor shall install the posts in a manner that prevents  
5           bulging of the slope face and prevents ripping, tearing, or pulling of the geosynthetic  
6           reinforcement. Holes through the geosynthetic reinforcement shall be the minimum size  
7           necessary for the post. The Contractor shall demonstrate to the Engineer prior to  
8           beginning guardrail post installation that the installation method will not rip, tear, or pull  
9           the geosynthetic reinforcement.
