

1 ***(April 1, 2002)***

2 ***Barrier Glare Screen***

3 The vertical blades shall be attached to the rail base in a positive mechanical manner to
4 prevent unintentional blade rotation or dislocation. Barrier glare screen shall be
5 attached to the top of the barrier using approved anchors and following the
6 manufacturer's recommendations. Each modular unit of 10 feet or less shall be secured
7 to the concrete barrier with anchors at a minimum of three points. Modular units greater
8 than 10 feet in length shall be secured at a minimum of four points. Spanning the joint
9 between concrete barrier sections will not be allowed.

10

11 When the temporary screening is no longer required, the Contractor shall remove the
12 screening units. When noted in the contract that the screening will become the property
13 of the Contracting Agency, the Contractor shall deliver and stockpile the screening units
14 at the location noted in the contract.
