

PS&E Word Description and Download Instructions

This program is used to compile Amendments and Special Provisions into one document for Construction Contracts.

Select the link titled '**Download for Windows XP/Word 2007**' → Click '**Run**'. This will install the program onto your pc and download all of the GSPS/Index's and Amendments needed to create Construction Contracts (including WSDOT and APWA files).

When there has been an update to the program, revisit this link and it will update your program files automatically. Sometimes there is a delay in updates vs. program updates and in these instances manually update the program files.

To update manually go to the main page and select "Download" beneath the heading "General Special Provisions." The files are broke into two groups; GSPs and Index's to mimic the setup on your pc. Download the GSPs from the website into your C:/pse/gsp folder and download the Index's from the website into your C:/pse/index folder.
