Chapter 1 General Information ................................................................. 1-1
  1.1 Introduction ................................................................................... 1-1
  1.2 Considerations .............................................................................. 1-2
  1.3 Work Duration .............................................................................. 1-4
  1.4 Personal Attributes ...................................................................... 1-4
    1.4.1 Worker Protection .............................................................. 1-4
  1.5 Personal Protective Wear ............................................................. 1-5
  1.6 Equipment .................................................................................... 1-5
    1.6.1 Traffic Control Device Crashworthy Requirements .............. 1-5
    1.6.2 Condition and Care of Equipment ....................................... 1-5
    1.6.3 Signs .................................................................................. 1-5
    1.6.4 Vehicles .............................................................................. 1-6
    1.6.5 Portable Changeable Message Signs (PCMS) .................... 1-7
    1.6.6 Arrow Boards .................................................................... 1-8
    1.6.7 Channelizing Devices ......................................................... 1-8
    1.6.8 Barricades .......................................................................... 1-9
    1.6.9 Positive Protection Devices ................................................. 1-9
    1.6.10 Temporary Concrete Barrier .............................................. 1-9
    1.6.11 Truck Mounted Attenuators .............................................. 1-10
    1.6.12 Warning Lights ................................................................. 1-11
    1.6.13 Flares .............................................................................. 1-11
    1.6.14 Portable Signal Systems .................................................... 1-11
    1.6.15 Automated Flagger Assistance Device (AFAD) ............... 1-12
    1.6.16 Portable Highway Advisory Radio (HAR) ......................... 1-12
  1.7 Flagging ....................................................................................... 1-12
  1.8 Pedestrians, Bicycles, and Other Roadway Users ...................... 1-14
    1.8.1 Pedestrians ........................................................................ 1-14
    1.8.2 Bicycles ............................................................................ 1-14
    1.8.3 Motorcycles ....................................................................... 1-15
    1.8.4 Schools ............................................................................. 1-15
  1.9 Additional Work Zone Considerations ....................................... 1-15
    1.9.1 Work Zone Speed Limits .................................................... 1-15
    1.9.2 Buffer Space and Shy Distance ......................................... 1-15
    1.9.3 Lane Closure Setup/Takedown ............................................ 1-16
    1.9.4 Survey Work Zones ........................................................... 1-16
    1.9.5 Public Information ............................................................. 1-16
    1.9.6 Roundabout Traffic Control .............................................. 1-17
    1.9.7 Road Closures ................................................................. 1-17
    1.9.8 Detour .............................................................................. 1-18
    1.9.9 Special Events ................................................................... 1-18
    1.9.10 Work Over Traffic .......................................................... 1-18
# Contents

## Chapter 2 Stationary Work Zones
- TCP 1 Typical Alternating One-Way Traffic Flagger Controlled ........................................ 2-3
- TCP 2 Typical Pilot Car Operation .................................................................................. 2-4
- TCP 3 Typical Single-Lane Closure for Multi-Lane Roadways ........................................ 2-5
- TCP 4 Typical Double-Lane Closure for Multi-Lane Roadways ...................................... 2-6
- TCP 5 Typical Shoulder Closure – Low Speed (40 mph or Less) ...................................... 2-7
- TCP 6 Typical Shoulder Closure – High Speed (45 mph or Higher) .................................. 2-8
- TCP 7 Typical Temporary Off-Ramp for Multi-Lane Roadways ....................................... 2-9
- TCP 8 Typical Temporary On-Ramp for Multi-Lane Roadways ...................................... 2-10
- TCP 9 Typical Short-Term Temporary On-Ramp for Multi-Lane Roadways ................. 2-11
- TCP 10 Typical Right Lane Closure With Shift – 5 Lane Roadway .................................. 2-12
- TCP 11 Typical Left Lane and Center Turn Lane Closure – 5 Lane Roadway ............... 2-13
- TCP 12 Typical Lane Shift – Three Lane Roadway ......................................................... 2-14
- TCP 13 Typical Short-Term Ramp Closure (On-Ramp and Off-Ramp) ......................... 2-15

## Chapter 3 Short Duration Work Zones
- 3.1 Introduction .................................................................................................................. 3-1
- 3.2 Guidance ...................................................................................................................... 3-1
- 3.3 Key Elements of Short Duration Work Zones ............................................................... 3-3
- 3.4 Short Duration Work Zone Condition .......................................................................... 3-3
- 3.5 Consideration and Assessment of Traffic Volumes in Work Zones .............................. 3-4
  - 3.5.1 Work Zone Type ...................................................................................................... 3-4
  - 3.5.2 Traffic Conditions .................................................................................................. 3-5
- 3.6 Very Short Duration Work Zones ................................................................................ 3-6
- 3.7 Short Duration Work Zone Rules ................................................................................ 3-7
- 3.8 Short Duration Don’ts and Dos .................................................................................... 3-8
- 3.9 Short Duration and Very Short Duration TCPs ............................................................... 3-9
- TCP 14 Typical Short Duration Lane Closure (Two-Lane, Two-Way Highway Application) .......................................................... 3-11
- TCP 15 Typical Short Duration Lane Closure (Multi-Lane Freeway and Highway Application) ........................................................................ 3-12
- TCP 16 Typical Short Duration Shoulder Work (Multi-Lane Application) ..................... 3-13
- TCP 17 Typical Short Duration Work Operation (Intersection Application) .................. 3-14
- TCP 18 Typical Very Short Duration Work Operation (Outside Traveled Way) (Two-Lane or Multi-Lane Highways) ........................................ 3-15
- TCP 19 Typical Very Short Duration Work Operation (Multi-Lane Application, Low Speed, 40 mph or Lower) ........................................ 3-16
- TCP 19a Typical Very Short Duration In-lane Work (Multi-Lane Freeway and Highway Application, High Speed, 45 mph or Higher) .......................................................... 3-17
- TCP 20 Typical Very Short Duration Lane Closure (Two-Lane Highway) ................... 3-18
- TCP 21 Typical Very Short Duration Work Operation (Intersection Application) ........ 3-19
Chapter 4  Mobile Operations

TCP 22  Typical Mobile Left Shoulder Closed (Freeway Application)  4-2
TCP 23  Typical Mobile Left-Lane Operation (Freeway Application)  4-3
TCP 24  Typical Mobile Middle-Lane Operation (Freeway Application)  4-4
TCP 25  Typical Mobile Lane Closure Operation on a Two-Lane Roadway  4-5
TCP 26  Typical Mobile Shoulder Closure Operation on a Two-Lane Roadway  4-6

Chapter 5  Intersection Operations

TCP 27  Typical Intersection Lane Closure – Three-Lane Roadway  5-2
TCP 28  Typical Intersection Lane Closure – Five-Lane Roadway  5-3

Chapter 6  Special Details and TCPs

TCD 1  Shoulder Work Area Protection During Non-Working Hours  6-3
TCD 2  Typical Example – Motorcycle Warning Sign Detail  6-4
TCD 3  Typical Example – Lane Closure With Shift  6-5
TCD 4  Typical Example – Speed Zone Detail for Chip Seal Project  6-6
TCD 5  Typical Example – Work Beyond the Shoulder  6-7
TCD 6  Typical Long-Term Shoulder Closure on High Speed Roadway  6-8
TCD 7  Rolling Slowdown  6-9
TCD 8  Typical Example – Rolling Slowdown  6-11
TCD 9  Emergency Operations  6-12
TCD 10  Typical Example – Emergency Operations  6-13
TCD 11  Temporary Pavement Marking Details  6-14
TCD 12  Typical Example – Temporary Intersection Pedestrian Traffic Control  6-15
TCD 13  Typical Example – Temporary Portable Signal  6-16
TCD 14  Typical Example – Automated Flagger Assistance Device (AFAD)  6-17
TCD 15  Typical Example – Work Within a Roundabout  6-18
TCD 16  Typical Mobile Shoulder Operation With Encroachment on a Two-Lane Roadway  6-19
TCD 17  Typical Temporary Exit Gore Channelization Plan  6-20

Appendix 1  Taper/Channelizing Device Table  A-1

Appendix 2  Reference Manuals  A-3

Appendix 3  Taper and Buffer Space Details  A-5
