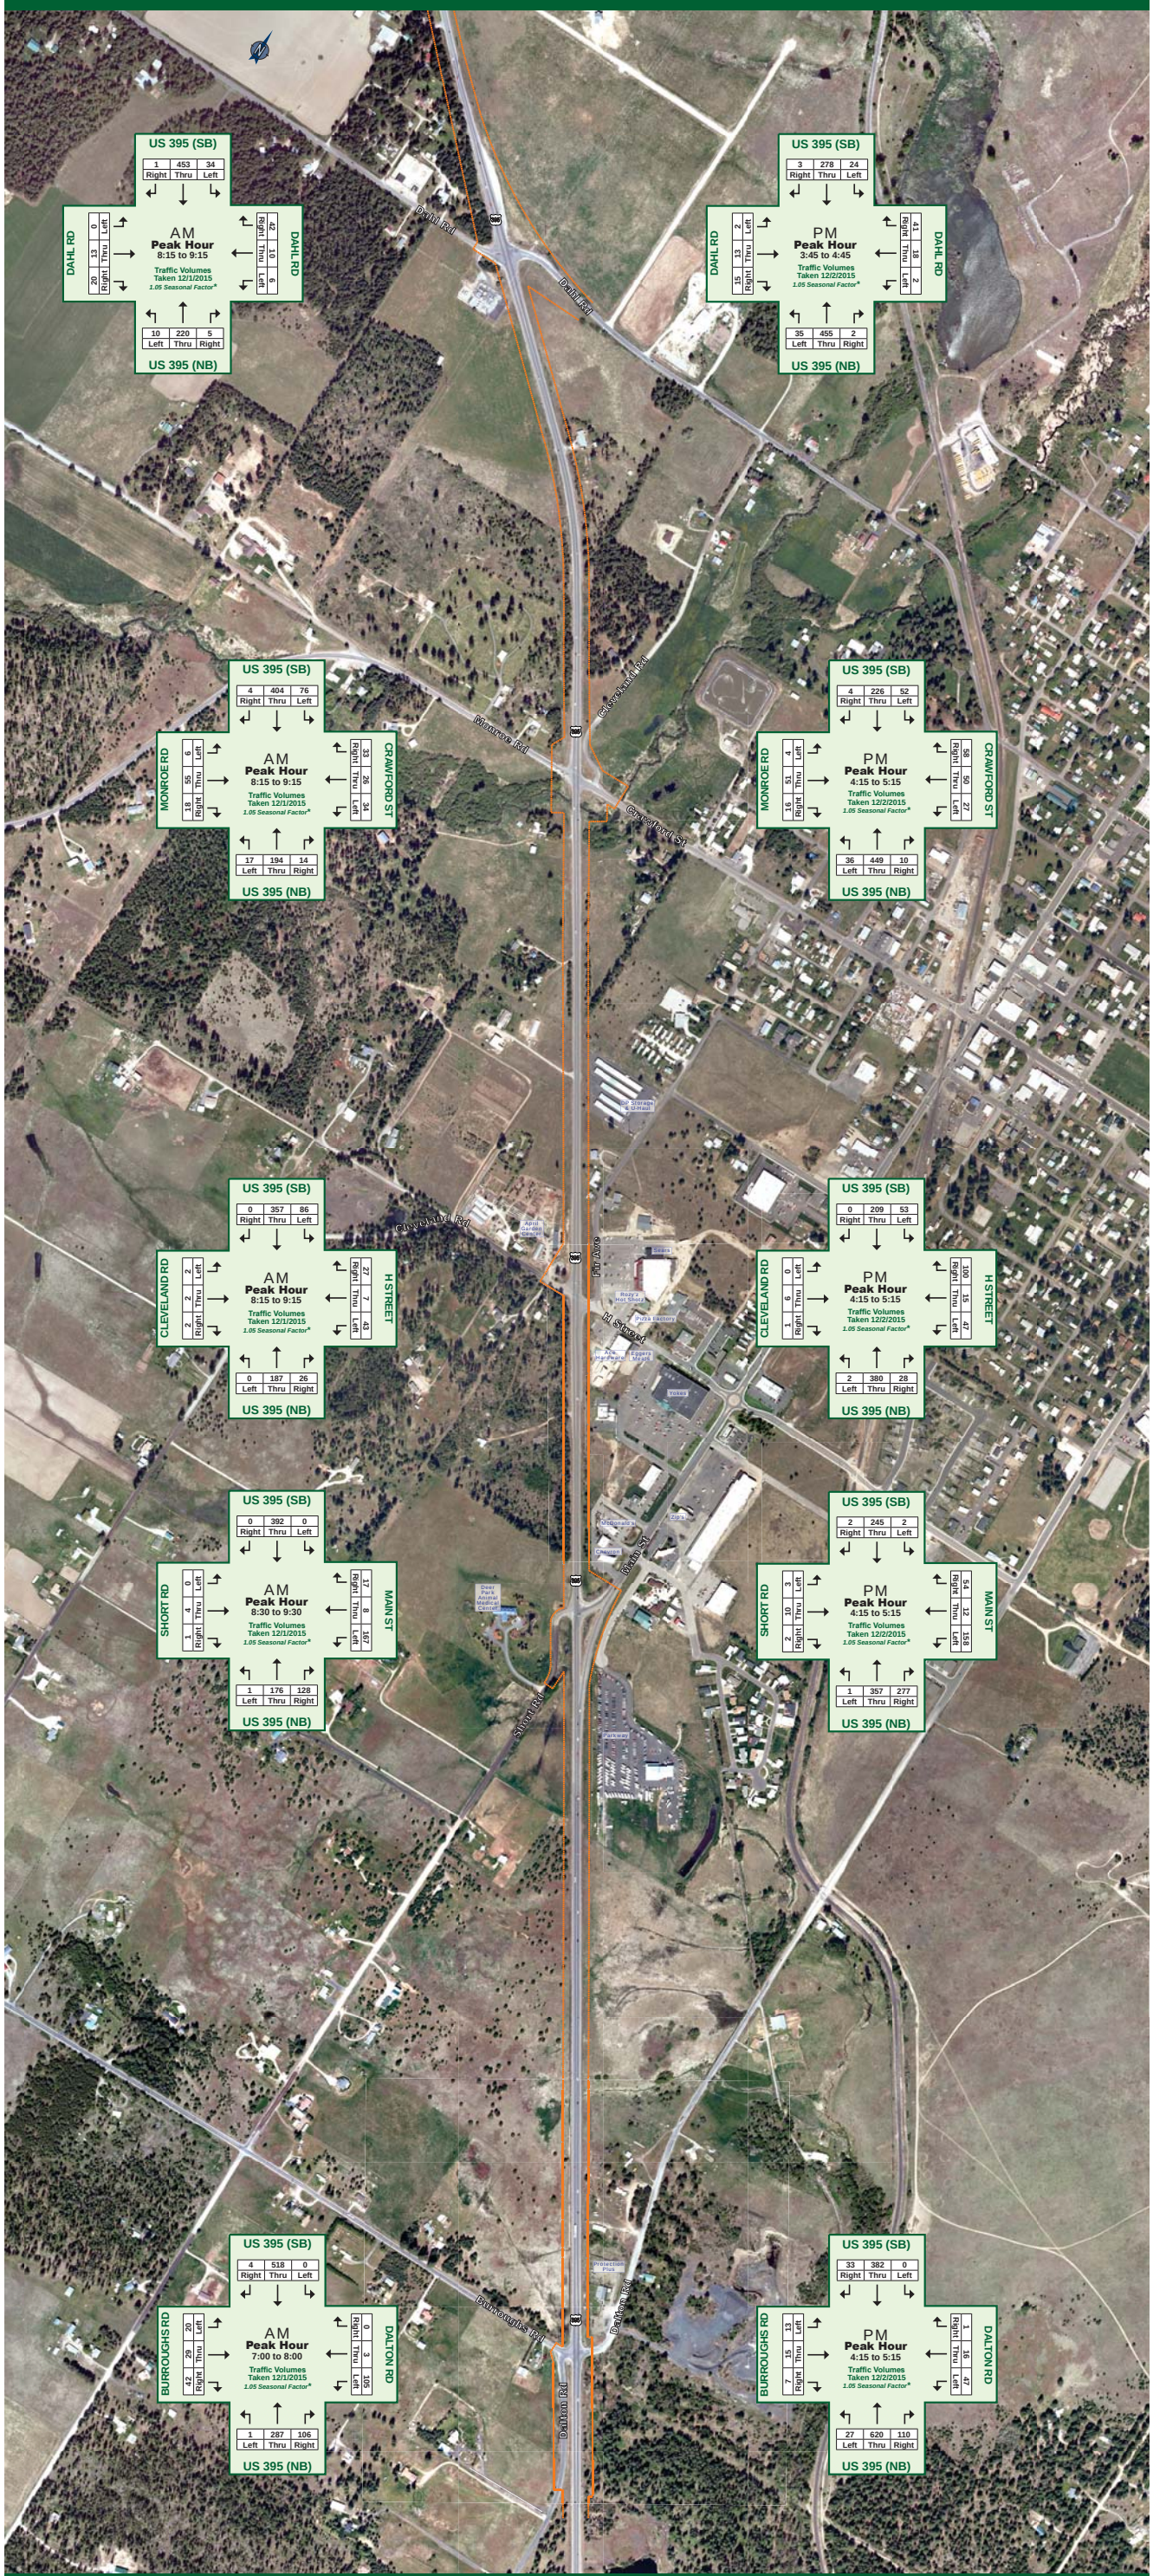
2015 Intersection Traffic Volumes

US 395 Deer Park - Intersection Improvement Study - Burroughs Road to Dahl Road



Eastern Region Traffic
Washington State
Department of Transportation

Informational Only
Subject to Revisions

*Volumes shown on this display were collected on 12/1/2015 and 12/2/2015. Because only a two day snapshot of the existing traffic conditions were captured, and traffic is typically below average in the winter these counts were adjusted (multiplied by a 1.05 Seasonal Factor) in order to provide a better representation of traffic conditions on an average day at these intersections.

Right-of-way shown is at a planning level and not to be used for construction.

Display Prepared February 2016.
