EXECUTIVE SUMMARY

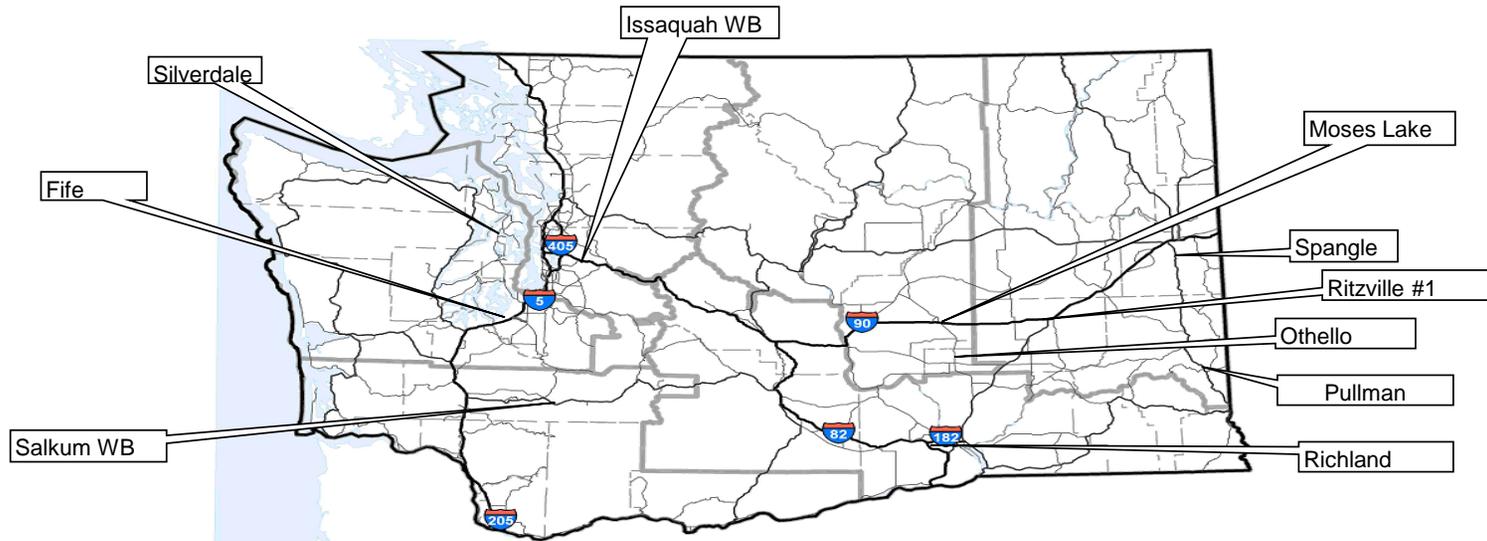

The Washington State Speed Report is primarily intended to provide reliable speed data to be used in highway design, speed trend analysis, and collision analysis. The collection method records all vehicles passing over the loop detectors and consists of vehicle volume, classification and speeds. Speed data is collected and reported in five mile per hour increments.

This report is based upon the speed data collected for the Third Quarter 2012, July 1st through September 30th.

Comparing speed trends for the *Third* quarters of 2010 and 2011 to 2012, the average speed and 85th percentile (definition in Glossary, last page) have remained relatively the same.

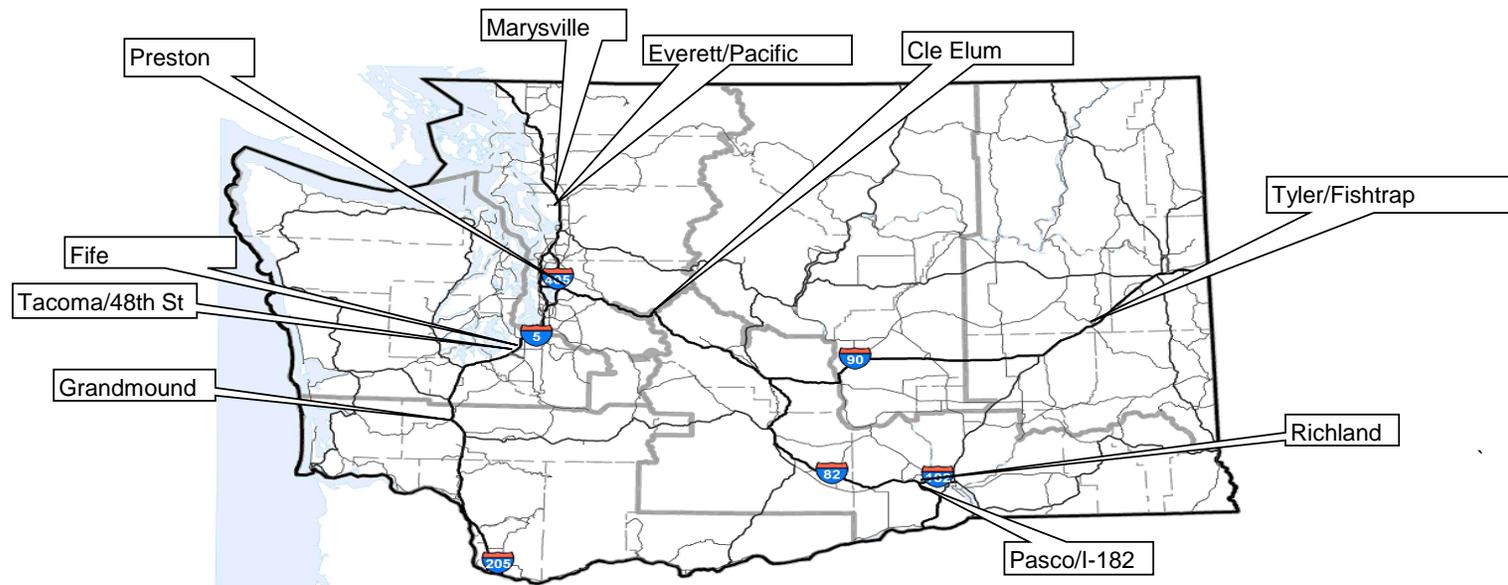

The loss of comparative data due to construction activities effected several Permanent Traffic Recorder sites. Data loss from recorders is listed in “Detailed Summary”; the loss may be for a partial quarter, one direction or both directions of travel at a particular location.

If there are questions regarding this report or requesting special speed studies from the Statewide Travel & Collision Data Office. Please contact the Automated Data Collection & Processing Office at (360) 570-2392, (360) 570-2394 or E-mail stcdoadc@wsdot.wa.gov

Detailed Summary

This report is based upon the speed data collected for the *Third Quarter 2012*, July 1st through September 30th.

The report reflects 47 permanent traffic recorder locations, throughout the state. This quarter 44 of the 47 speed sites collected & reported data.

Comparing speed trends for the *Third* quarters of 2010 and 2011 to 2012, the average speed and 85th percentile (definition in Glossary, last page) have remained relatively the same.

When comparing state averages, some individual PTR/WIM (Permanent Traffic Recorder/Weigh-In-Motion) sites tend to have higher percentages of vehicles traveling faster than the posted speed. For example; the PTR near Issaquah on I-90 recorded 82.6% of the vehicles observed above the posted speed and 42.7% of the vehicles were traveling at least 5 mph greater than the posted speed. The Average Speed at this location was 3.8 mph above the posted speed and the 85th percentile was 9.4 mph above. Even though there was no data collected in the East bound direction.

The site with the highest vehicle count traveling above 90 mph was Tacoma/48th St at mile post 131.18 on I-5. The site recorded 6,749 vehicles exceeding 90 mph, (daily average of 73 vehicles.) Although, the 6,749 vehicles is only 0.04% of the total vehicles observed, this equates to 4 of every 10,000 vehicles during the three-month period.

The loss of comparative data due to construction activities effected several Permanent Traffic Recorder sites. Data loss from recorders is listed in “Detailed Summary”; the loss may be for a partial quarter, one direction or both directions of travel at a particular location.

Please note: the current collection systems used at PTR/WIM locations reflect all vehicle types observed. Emergency and enforcement vehicles may influence the statistic being reported, especially in the locations with the highest volume of vehicles traveling greater than 90 miles per hour as reported in the Top Ten Section of this report. All speed data is represented by main line traffic, ramps are not included.

Detailed Summary Continued

In comparing the *Third* quarters from 2010 & 2011 to 2012, the average speed and the 85th Percentile has remained relatively the same on all highways with only slight variations. Except 65 MPH Highways in 2010, Percent Above Posted Speed was at 18.6%; now it is at 58.3%; was probably due to construction activities.
