

What is the Concrete Technology Corporation facility?

- In addition to one of the three sites under evaluation in Grays Harbor, WSDOT will use an existing facility in Tacoma to supplement pontoon construction. Using both sites will expedite pontoon construction.
- The Concrete Technology Corporation, Inc. (CTC) facility was used for the construction of Hood Canal Bridge pontoons.
- The CTC facility is unable to produce all of the needed pontoons in a timely manner. It could build just one large SR 520 pontoon every six months.
- If we only use the CTC facility, it would take more than 12 years to construct the pontoons needed for the project.
