

Notes/Definitions:

Object Identifier: The Utility's unique number of the object if one is assigned.

Description: Pole, guy anchor, transformer, etc.

Average Daily Traffic: Provided by WSDOT found in the Route Information Table.

Slope: A numerical representation of the steepness of a slope. Presented as a ratio of horizontal change per one foot of vertical change. (3:1 = 3 feet horizontal per 1 foot vertical change)

Average Slope: Calculated by dividing the total vertical change by the sum of the foreslope and the ground distance. Fill slopes steeper than 4:1 must be evaluated by the recovery area and cannot be averaged.
