

Bid Tabs Pro Plus Program - Add on Module

As a companion product to BidTabs Professional (BTP), BidTabs PLUS is add-on module (program) allowing you to set up a spreadsheet of pay items with multiple comparison columns of cost information.

You can import the pay item data for an upcoming job using an electronic format such as Expedite or Excel, then load these pay item prices into BTP Plus columns for comparison.

Using this comparison you can determine a likely probable Bid Price range for your bid items.

The pay item averages in the Comparison columns are based on parameters defined by the user, such as state average prices in a county or region, a competitor's prices and many others. By viewing what past prices have been for pay items, a user can very quickly get a feel for average prices or competitors prices from past projects that were similar in size, nature or location for an upcoming job.

Program Highlights

Import Data – Easily import pay item data from a DOT bid disk or from a spreadsheet file, or pick pay items (batch load) from a master database or add pay items one at a time.

Quantity Parameters – When loading averages for all pay items you can enter a quantity percentage over/under the current project quantity that the system will use when calculating pay item averages. You can also enter project size ranges to calculate lump sum items.

Specific Pay Item – When loading averages for specific pay items you can quickly view all items that make up the average price for a pay item. You then have the ability to "dial in" the weighted average by excluding specific prices that you feel are too low or too high and may skew the price.

Category Totals – Easily create and display subtotals for each category of work. Quickly break down and review each category of work for a more in-depth understanding of work to be performed.

Reports – Compare different pricing scenarios for any project or Exception reporting.

Import/Export – Import and export pay item data From and To other programs and files including Expedite and spreadsheet files.
