Sand Equivalent

SE#1 _____

SE#2 _____

SE Avg. _____

SE Specification _____ Min.

Fracture

Wt. of Fractured Particles (gm) _____

Wt. of Unfractured Particles (gm) _____

Wt. of Questionable Particles (gm) _____

Percent Fracture _____

Fracture Specification _____ Min.

Moisture Content

Wt. of Wet Sample (gm) _____

Dry Wt. (gm) _____

Wt of Moisture _____

Percent Moisture Content _____

Note: Round SEs up to the next whole number. Round Percent Passing to the nearest whole number except #200 - round to the nearest 0.1%.

Formulas:

Sand Equivalent = (Sand Ht. **/** Clay Ht.) **X** 100

Percent Passing for Gradation = 100 **-** ((Wt. Retained **/** Dry Wt.) **X** 100)

$$\text{Percent Fracture} = \frac{\text{(Wt. of Fractured Particles + (Wt. of Questionable Fractured Particles / 2))} \times 100}{\text{(Wt. of Fractured Particles + Unfractured Particles + Questionable Particles)}}$$

$$\text{Moisture Content} = \frac{\text{(Wt. of Wet Sample - Dry Wt.)} \times 100}{\text{Dry Wt.}}$$
