In accordance with the National Environmental Policy Act and Washington State Environmental Policy Act, the Interstate 90 (I-90) Snoqualmie Pass East Environmental Impact Statement (EIS) evaluates environmental conditions within a 15-mile corridor of I-90 in Kittitas County, Washington. The project corridor commences on the eastern side of Snoqualmie Pass at Milepost (MP) 55.10 in Hyak and ends at MP 70.3 near Easton. The Washington State Department of Transportation (WSDOT) proposes to improve the corridor to meet project needs (avalanches, unstable slopes, structural deficiencies, traffic volume, and ecological connectivity). After considering various route alternatives, WSDOT determined that the common route alternative would be analyzed. Within the common route, four alternative treatments to the Keechelus Lake Alignment and three alternative connectivity improvement packages were considered. The environmental effects of these action alternatives, in addition to the No-Build are presented in this EIS.
