Eastside Corridor
Tolling Study

Interagency Working Group
October 20, 2009
Welcome

Craig Stone
Director of WSDOT Toll Division
Agenda

- Recap Study Process and Public Input
- Initial Traffic and Revenue Results
- Draft Principles
- Wrap Up
Meeting Goals

1. Review public input to date
   - Where have we been?
   - Where are we going?

2. Review initial findings of the traffic and revenue results
Range of Considerations

- Should we develop a managed lane system on the Eastside Corridor?
- What is the balance between congestion management and revenue generation?
- How should the system operate?
  - A one-lane system? Two-lane system? Or, a mix of the two?
  - Should the HOV designation be 2+ or 3+ or be phased from 2+ to 3+ as it becomes necessary?
- How should we implement the system?
Study Recap

Eastside Corridor Communications
What is our charge?

Transportation Budget – ESSB 5352

By January 2010, the department must prepare a traffic and revenue study for Interstate 405 in King county and Snohomish county that includes funding for improvements and high occupancy toll lanes, as defined in RCW 47.56.401, for traffic management. The department must develop a plan to operate up to two high occupancy toll lanes in each direction on Interstate 405.

For the facility listed in (a) of this subsection, the department must:

i. Confer with the mayors and city councils of jurisdictions in the vicinity of the project regarding the implementation of high occupancy toll lanes and the impacts that the implementation of these high occupancy toll lanes might have on the operation of the corridor and adjacent local streets;

ii. Conduct public work sessions and open houses to provide information to citizens regarding implementation of high occupancy toll lanes and to solicit citizen views;

iii. Regularly report to the Washington transportation commission regarding the progress of the study for the purpose of guiding the commission’s toll setting on the facility; and

iv. Provide a report to the governor and the legislature by January 2010.
Range of Study Options

* Financing possible with existing corridor funds
Transit Coordination

Making Transit & HOV Travel Work:

- Principles for maximizing transit effectiveness, speed & reliability
- Optimal transit access

Meeting Accomplishments:

- Affirmed general I-405 Corridor Master Plan vision for an multi-modal corridor with integrated transit
- Identified issues & challenges
- Drafted key principles
- Working to develop incremental steps to achieve vision

Key principles

- Speed & reliability
- Access for transit
- Transit & HOV priority
- Safety
- Balance multiple users
Public Outreach

- Hosted booths at 10 summer festivals
- Heard from 1,105 people through comment forms and email correspondence
- Mailed 220,000 postcards to households in the I-405 and SR 167 corridor to advertise the online survey and open houses
- Held 3 public meetings, with 2 more coming in November
- Fielded 2,584 online surveys
- Conducted a statistically valid phone survey of 1,000 I-405 or SR 167 users
- Facilitated four corridor focus groups
  - 2 with I-405 users and 2 with SR 167 users (48 total participants)
Key Findings so far…

- **Use = Support.** Focus groups show that those who have used toll lanes, like the SR 167 HOT lanes and support the idea of express toll lanes on I-405.

- **Congestion relief = Willingness to pay.** Our research shows that approximately 52 percent would pay to use express toll lanes if it would give them a faster, more reliable trip. Participants in the focus groups who have used HOT lanes are willing to pay up to $5 a segment on I-405 to travel faster.

- **Understanding = Support.** People who understand the benefits of express toll lanes tend to support them. When electronic toll operations were explained to phone survey participants, they found the collection method to be appealing.

- **Undecided = Opportunity.** For people who do not yet know the benefits of express toll lanes, there is an opportunity to alleviate their concerns through further information.

- **Dislike of tolls = Non supporters.** People who dislike the idea of tolling under most or all circumstances are unlikely to become supporters.
Public support for tolled lanes increases after implementation

How our results measure up nationally – highlight on I-15 in San Diego
Highlighting: SANDAG I-15 Express Lanes

Toll Users
- Extend Express (Toll) Lanes: 49%
- Add Regular Lanes: 24%
- Add Transit: 10%
- Build Other Roads: 13%
- Don't Know: 4%

Non-Users
- Add Regular Lanes: 26%
- Extend Express (Toll) Lanes: 37%
- Add Transit: 11%
- Don't Know: 5%
- Build Other Roads: 21%

“… the single most effective way to reduce congestion.” - 2003 I-15 Phone Survey
SR 167 HOT Lanes Users are Big Supporters

- Prior to implementation - mixed opinion
  - 37.7% a good idea
  - 38.2% will help congestion
  - 39.8% will slow transit & carpools
  - 47.4% won’t relieve congestion

- Post implementation – SR 167 HOT lane users are big supporters
  - 72% would pay to use HOT lanes
  - 71% agree they provide a faster trip

“… Expand HOT lanes to other HOV lanes in the area.”
Upcoming Outreach – Please Join Us!

Express Toll Lanes on I-405 and SR 167?

Plans underway to operate our highways smarter.

Ever driven on the express lanes? Or the SR 167 high occupancy toll (HOT) lanes? If so, you may be interested in a possible new transportation option.

WSDOT is considering creating a two-lane express toll lane system, alongside existing toll-free general purpose lanes on I-405. The express toll lanes would connect with SR 167 HOT lanes, creating a 50+ mile "expressway within a highway" from Puyallup to Lynnwood.

Through the use of technology, an Eastside Corridor express toll lane system could give commuters a choice for a reliable, fast trip every day.

We’d like your input.

Join us to share your feedback and discuss the tolling study with project staff. You can come by any time between 4:00 and 7:00 pm. Your input is important and will be included in a report to the Governor and Legislature in January 2016.

Washington State Population Growth
Demand for our highways is increasing rapidly

* Source: OPM Nov. 2007 forecast

2 million more people expected by 2030

Seven in ten people in Washington State live within 15 miles of Interstate 5.
Optimizing System Performance

- 60 MPH: 500 Vehicles Moved
- 45-55 MPH: 1800 Vehicles Moved
- <35 MPH: 700 Vehicles Moved
Our congestion is outgrowing current strategies
Dynamic Pricing Solution

The most effective price to move the most traffic

If the price is too high, the lane will be empty
Dynamic Pricing Solution

*The most effective price to move the most traffic*

If the price is too low, the lane will be congested and slow moving.
Dynamic Pricing Solution

The most effective price to move the most traffic

Allow the users to determine the price to keep consistent speeds.
If the price is too high, the lane will be empty.

**Dynamic Pricing Solution**

*The most effective price to move the most traffic*

If the price is too low, the lane will be congested and slow moving.

Allow the users to determine the price to keep consistent speeds.

Traffic and Gross Revenue Analysis

Planning Level Study

Two Major Factors Driving Analysis Results

- Population and Employment Forecasts
- Willingness to Pay

Diagram:
- Willingness to pay
- Demands
- Demand Growth
- Econometric Modeling
- Traffic and Revenue
Traffic and Gross Revenue Analysis
- Dynamic Pricing

- Overriding Criteria
  - Rates set to optimize throughput so that lanes are free flowing (45 mph or faster)

- Secondary Objective
  - Rates set to generate revenue
National Experience

- Dynamic Pricing Concept
  - Well documented that it works
  - Most programs are expanding their HOT lanes or express toll lanes to the next phase
  - I-95 in Florida after 6 months in operation are seeing speeds doubled in the GP lanes from 1 year ago

Traffic and Gross Revenue Analysis

System Performance

- The performance takes into consideration 5 sections (screen lines) of the corridor
- Evaluates the total number of persons and vehicles moving at high speeds
- Compares, for each option, a tolled improvement and no-tolled improvement
- To make an “apples to apples” comparison, the models use 3+
  - 1, 4, and 5 could operate at 2+ toll free in the near term, but revenue would less and toll rates would be higher.
Study Options - Traffic Performance

People and Vehicles Moved

- Vehicles moving at 45 MPH or faster
  - Yellow: No Toll Improvement
  - Orange: Tolled Improvement

* Financing possible with existing corridor funds

Revenue Methodology & Preliminary Results

Scott Ladner
Parsons Brinkerhoff

Kim Henry
Eastside Corridor Project Director
Determination of Net Revenue

- Gross revenue comes from traffic and toll rate assumptions by Wilbur Smith Associates
- Net revenue is gross revenue less costs of operations and maintenance (O&M)
- O&M costs include:
  - Maintaining roadway and toll collection system
  - Operating customer service center and back office
  - Enforcement provided by Washington State Patrol
- Net revenue = cash flow available for repaying bonds (debt service)
- Periodic rehabilitation of facility will be paid after debt service
Determination of Toll Funding Contribution

- Net toll revenues and project cash flow needs are modeled to estimate the toll contribution to project costs
- Assumes 30-year non-recourse bonds (only toll revenues are pledged to repayment)
- Financing assumptions reflect the market for toll-backed debt and direction from the Office of the State Treasurer
  - Dynamically priced HOT lanes considered riskier investment than toll roads or bridges
  - 2.0x Debt Service Coverage Ratio
  - ~9% interest rate

* Financing possible with existing corridor funds
Key Findings to Date

- National and local experience shows that public support increases after implementation. Toll lane users support a free-flowing (45 mph or faster) traffic option.

- Toll lanes relieve congestion better than non tolled lanes. When an express toll lane choice is implemented, speeds improve in all lanes.

- Toll rates are driven by supply and demand.

- Projections show great revenue generating potential across all options.

- Study options 1 and 2 could be self-financed, generating more revenue than needed.
Draft Funding & Phasing Principles

Denise Cieri
Eastside Corridor Deputy Project Director
Draft Principles

- Create a phasing plan which arrives at a seamless corridor

- Proposed system needs to fit within regional toll lane context

- Need policy to address 2+, 3+

- Revenue generated from tolling should stay in the corridor

- Continue working on interim solution towards master plan BRT vision
Wrap-up/Next Steps

Craig Stone
Director of WSDOT Toll Division
Next Steps: Meeting 4

1. Review results for Study Option 5
2. Discuss 2+ and 3+ model
3. Review and finalize study principles
4. Detailed report on public outreach
