Historic Property Inventory Report for
at 1966 Harvard Ave E, Seattle, WA 98102

Changes to windows: Extensive
Other (specify): Glass - Curtain Wall
Cladding Foundation Roof Material Roof Type
Wood Concrete - Poured Asphalt / Composition - Built Up Flat with Eaves

Date Of Construction: 1917
Study Unit Other Architect: Unknown
Builder: Unknown
Engineer: Unknown

Property appears to meet criteria for the National Register of Historic Places: No
Property is located in a potential historic district (National and/or local): No
Property potentially contributes to a historic district (National and/or local):

Statement of Significance
This triplex from 1917 is located in the North Capitol Hill neighborhood, adjacent to I-5. Available research did not reveal any associations with significant persons or events, and the house does not represent the work of a master, nor possess high artistic value. It was extensively remodeled in 1967, and then added onto in 1984, and there are no visible remains of the original building from the public right of way. It has suffered loss of integrity of design, feeling, materials, and workmanship. Its setting has been impacted by the construction of I-5 immediately to the west. It does not appear to meet any of the criteria for NRHP eligibility and retains little integrity. Therefore, it is not individually eligible for the NRHP.

The building is located in the North Capitol Hill neighborhood, bound by I-5, SR 520, Interlaken Park, and E. Howe Street. Greater Capitol Hill contains the Harvard-Belmont Historic District, Volunteer Park, and several properties individually listed in the NRHP, as well as several designated Seattle Landmarks. However, none of these properties are located in North Capitol Hill. The North Capitol Hill area is a mixture of historic buildings, mid-century buildings, and newer, contemporary buildings. Mainly residential, it also has several commercial buildings and institutional properties. There are also several older buildings that have been substantially remodeled and now appear contemporary in style. A limited survey of the area immediately surrounding this building performed for the purposes of this project found several examples of newer construction and extensive remodels. While North Capitol Hill has strong physical boundaries and is a cohesive community, it has no recognized historic properties and appears unlikely to be eligible as a historic district.

Description of Physical Appearance
This residence was originally a side-gabled Craftsman home that was extensively remodeled in 1967 into a “modern” façade of large windows designed to maximize views of the Sound and to accentuate an architectural statement of Post WW II Modernism. A side-view photo dated 1967 shows how the modern façade was remodeled onto the original Craftsman house.

This residence, built in 1917, was originally a side-gabled Craftsman style home. It was extensively remodeled in 1967 with a contemporary façade of large windows designed to maximize views of the Sound. A side-view photo dated 1967, viewed at the assessor’s office, shows how the modern façade was remodeled on the original Craftsman style house. The building is now a two story tri-plex with a flat roof and a two car garage below the living space on the ground level. The street view of the house is dominated by two stories of plate glass windows that span most of the façade. To the left of the large windows is a set of stairs leading up to the main entry. The stairs pass under a second floor balcony that covers the remaining part of the façade. The exterior that is not glass is sheathed in horizontal wood siding.

NARRATIVE SECTION

This triplex from 1969 is located in the North Capitol Hill neighborhood, adjacent to I-5. Available research did not reveal any associations with significant persons or events, and the house does not represent the work of a master, nor possess high artistic value. It is a representative example of Modern style architecture and retains good physical integrity. Its setting has been impacted by the construction of I-5 immediately to the west. It does not appear to meet any of the criteria for NRHP eligibility. Therefore, it is not individually eligible for the NRHP.

The triplex is located in the North Capitol Hill neighborhood, bound by I-5, SR 520, Interlaken Park, and E. Howe Street. Greater Capitol Hill contains the Harvard-Belmont Historic District, Volunteer Park, and several properties individually listed in the NRHP, as well as several designated Seattle Landmarks. However, none of these properties are located in North Capitol Hill. The North Capitol Hill area is a mixture of historic buildings, mid-century buildings, and newer, contemporary buildings. Mainly residential, it also has several commercial buildings and institutional properties. There are also several older buildings that have been substantially remodeled and now appear contemporary in style. A limited survey of the area immediately surrounding this building performed for the purposes of this project found several examples of newer construction and extensive remodels. While North Capitol Hill has strong physical boundaries and is a cohesive community, it has no recognized historic properties and appears unlikely to be eligible as a historic district.

This is a two story triplex with a rectangular footprint, built in 1969. It has a shallow front gable roof with projecting eaves on the sides and a very deep overhang on the front façade with exposed beams. The exterior of the building is clad in stucco. The first and second floor front elevations are nearly identical, consisting of large, paired, fixed plate glass windows at each end, with a single fixed plate glass window of the same size and a pair of sliding glass doors in the center. Windows appear to be original, in aluminum frames, while the doors are vinyl replacements. A full width balcony stretches across both levels with a railing composed of glass panels in a metal frame. On the second floor, the center openings are topped by a pair of large transom windows in the peak of the gable end. Square posts support the balconies from below, one at each corner. At street level is a large garage with three paneled, roll-up garage doors. The garage has a flat roof with a projecting eave on the front. Two pairs of sliding glass doors that do not appear to be original access the garage roof top from the center of the front façade of the building.

**Property appears to meet criteria for the National Register of Historic Places:** No

**Property is located in a potential historic district (National and/or local):** No

**Property potentially contributes to a historic district (National and/or local):**

**Statement of Significance**

This residence from 1901 is located in the North Capitol Hill neighborhood, adjacent to I-5. Available research did not reveal any associations with significant persons or events, and the house does not represent the work of a master, nor possess high artistic value. An extensive remodeling in the late 20th century resulted in a modern appearance, leaving no visual evidence of the original building appearance. The building has suffered loss of integrity of design, feeling, materials, and workmanship. Its setting has been impacted by the construction of I-5 immediately to the west. It does not appear to meet any of the criteria for NRHP eligibility and retains little integrity. Therefore, it is not individually eligible for the NRHP.

The house is located in the North Capitol Hill neighborhood, bound by I-5, SR 520, Interlaken Park, and E. Howe Street. Greater Capitol Hill contains the Harvard-Belmont Historic District, Volunteer Park, and several properties individually listed in the NRHP, as well as several designated Seattle Landmarks. However, none of these properties are located in North Capitol Hill. The North Capitol Hill area is a mixture of historic buildings, mid-century buildings, and newer, contemporary buildings. Mainly residential, it also has several commercial buildings and institutional properties. There are also several older buildings that have been substantially remodeled and now appear contemporary in style. A limited survey of the area immediately surrounding this building performed for the purposes of this project found several examples of newer construction and extensive remodels. While North Capitol Hill has strong physical boundaries and is a cohesive community, it has no recognized historic properties and appears unlikely to be eligible as a historic district.

**Description of Physical Appearance**

This residence was originally built in 1901, remodeled in 1935 and remodeled again some time in the late 20th century. No visual evidence remains of the original structure. The original exterior material has been replaced with T1-11 vertical board. The building is two full stories with a 2-car garage below at the street level. The front gable roof is clad in composition shingles and has deep eaves. The second floor is dominated by two large, fixed, horizontal, plate glass windows, flanked by smaller, vertical windows. The bottom of the second floor wall balls out to form flared eaves over the first floor. The second floor projects out considerably over the first floor, creating a porch and entry. The projecting second floor is supported by square wood posts. The entry is a double-leaf glazed door, and there is a three-light plate glass window to the east of it that includes an operable awning sash. A solid wall of T1-11 forms the porch railing. A large deck sits over the ground floor garage with a wooden pergola and a paneled wood wall forming the railing. The garage has two paneled roll-up doors.

### Statement of Significance

This residence from 1932 is located in the North Capitol Hill neighborhood, adjacent to I-5. Available research did not reveal any associations with significant persons or events, and the house does not represent the work of a master, nor possess high artistic value. It is a representative example of Tudor Revival style architecture, and retains good physical integrity. Its setting has been impacted by the construction of I-5 immediately to the west. It is eligible for the NRHP under Criterion C for its distinctive characteristics, representative of its architectural style.

The house is located in the North Capitol Hill neighborhood, bound by I-5, SR 520, Interlaken Park, and E. Howe Street. Greater Capitol Hill contains the Harvard-Belmont Historic District, Volunteer Park, and several properties individually listed in the NRHP, as well as several designated Seattle Landmarks. However, none of these properties are located in North Capitol Hill. The North Capitol Hill area is a mixture of historic buildings, mid-century buildings, and newer, contemporary buildings. Mainly residential, it also has several commercial buildings and institutional properties. There are also several older buildings that have been substantially remodeled and now appear contemporary in style. A limited survey of the area immediately surrounding this building performed for the purposes of this project found several examples of newer construction and extensive remodels. While North Capitol Hill has strong physical boundaries and is a cohesive community, it has no recognized historic properties and appears unlikely to be eligible as a historic district.

### Description of Physical Appearance

This is a well preserved and architecturally intact single family residence in the Tudor Revival style, built in 1932. The one-story house has an L-shaped footprint with a side gable roof over the main house and a front gable with a clipped or jerkinhead end over the front "L" section. The roof is steeply pitched, clad in composition shingle and lined with a wooden fascia board. There is a small, square dormer clad in wide wood siding with a steep pyramidal roof and a six-light window on the front western slope of the main roof. The exterior of the house is brick veneer, with patterned brick and exposed timber frames highlighting the shed-roofed entry portico. The front façade gable end has a 12-light window with a course of jack end bricks as the lintel and a brick sill. Below this is a large, fixed, single pane window flanked by ten-light side lights. On the front façade section to the east of the entry is a pair of 12-light windows. The house retains an exterior brick chimney on the south elevation. A one-car, concrete block garage with a castellated parapet sits at street level below the residence. A wooden deck with wood picket railing has been added to the front elevation adjacent to the entry portico.

#### NARRATIVE SECTION

**Date Of Construction:** 1925

**Architect:** Unknown

**Builder:** Unknown

**Engineer:** Unknown

**Property appears to meet criteria for the National Register of Historic Places:** No

**Property is located in a potential historic district (National and/or local):** No

**Property potentially contributes to a historic district (National and/or local):**

This residence from 1925 is located in the North Capitol Hill neighborhood, adjacent to I-5. Available research did not reveal any associations with significant persons or events, and the house does not represent the work of a master, nor possess high artistic value. It is a representative example of Dutch Colonial Revival style architecture. It has suffered some loss of integrity of design and materials from the replacement of windows, and its setting has been impacted by the construction of I-5 immediately to the west. It does not appear to meet any of the criteria for NRHP eligibility. Therefore, it is not individually eligible for the NRHP.

The house is located in the North Capitol Hill neighborhood, which is bound by I-5, SR 520, Interlaken Park, and E. Howe Street. Greater Capitol Hill contains the Harvard-Belmont Historic District, Volunteer Park, and several properties individually listed in the NRHP, as well as several designated Seattle Landmarks. However, none of these properties are located in North Capitol Hill. The North Capitol Hill area is a mixture of historic buildings, mid-century buildings, and newer, contemporary buildings. Mainly residential, it also has several commercial buildings and institutional properties. There are also several older buildings that have been substantially remodeled and now appear contemporary in style. A limited survey of the area immediately surrounding this building performed for the purposes of this project found several examples of newer construction and extensive remodels. While North Capitol Hill has strong physical boundaries and is a cohesive community, it has no recognized historic properties and appears unlikely to be eligible as a historic district.

This is an example of the popular Dutch Colonial Revival style of residential architecture from 1925. It is two stories under a gambrel roof of composition shingle and has a rectangular footprint. The exterior is sheathed in horizontal wood siding, with wider boards on the first floor, and narrower boards on the dormer and second story. The front facade faces west to Harvard Avenue East, but access to the property and its address are on East Boston Street. The original, west elevation entrance has a front gable with an arched spandrel over the door, supported on curved brackets. A three bay, shed dormer covers most of the west elevation roof. This dormer has three sets of paired multi-light windows. A matching dormer is found on the east elevation. An apron of roof divides the first and second floors, separating the body of the house from the gambrel. Some of the original wood-frame, double hung, 4/1 windows remain, but most have been replaced with 1/1. A white picket fence surrounds the property.

Statement of Significance

This residence from 1924 is located in the North Capitol Hill neighborhood, adjacent to I-5. Available research did not reveal any associations with significant persons or events, and the house does not represent the work of a master, nor possess high artistic value. While it is a representative example of Dutch Colonial Revival style architecture, it has suffered loss of integrity of design, materials, and workmanship from replacement of siding, doors, and windows, and the addition of a large, second story deck. Its setting has been impacted by the construction of I-5 immediately to the west. It does not appear to meet any of the criteria for NRHP eligibility. Therefore, it is not individually eligible for the NRHP.

The house is located in the North Capitol Hill neighborhood, bound by I-5, SR 520, Interlaken Park, and E. Howe Street. Greater Capitol Hill contains the Harvard-Belmont Historic District, Volunteer Park, and several properties individually listed in the NRHP, as well as several designated Seattle Landmarks. However, none of these properties are located in North Capitol Hill. The North Capitol Hill area is a mixture of historic buildings, mid-century buildings, and newer, contemporary buildings. Mainly residential, it also has several commercial buildings and institutional properties. There are also several older buildings that have been substantially remodeled and now appear contemporary in style. A limited survey of the area immediately surrounding this building performed for the purposes of this project found several examples of newer construction and extensive remodels. While North Capitol Hill has strong physical boundaries and is a cohesive community, it has no recognized historic properties and appears unlikely to be eligible as a historic district.

Description of Physical Appearance

This is a Dutch Colonial Revival style residence from 1924. It is two stories with a typical gambrel roof of asphalt shingle and a rectangular footprint. There is a shed dormer on both the façade and rear elevations, each with three sets of paired windows. The main entry is in the center of the façade and is flanked by two large windows. The entry has a rounded arch hood set in the roof apron supported on very large, ornate brackets. The entry is accessed by a brick stoop. The two first floor façade windows were covered with shades at the time of the survey. The building is clad in replacement vinyl siding, and all doors and windows have been replaced. A second story deck has been added to the west side elevation, supported on wood posts. A single car garage is below grade on the west side of the front elevation.

**Date Of Construction:** 1959

**Architect:** Unknown

**Builder:** Unknown

**Engineer:** Unknown

**Property appears to meet criteria for the National Register of Historic Places:** No

**Property is located in a potential historic district (National and/or local):** No

**Property potentially contributes to a historic district (National and/or local):**

**Statement of Significance**

This residence from 1959 is located in the North Capitol Hill neighborhood, adjacent to I-5. It was extensively remodeled in 1985, giving it a modern Contemporary style appearance. Available research did not reveal any associations with significant persons or events, and the house does not represent the work of a master, nor possess high artistic value. Its integrity of design, materials, workmanship, and feeling has been impacted by the 1985 rebuild. Its setting has been impacted by the construction of I-5 immediately to the west. It does not appear to meet any of the criteria for NRHP eligibility and retains little integrity. Therefore, it is not individually eligible for the NRHP.

The house is located in the North Capitol Hill neighborhood, bound by I-5, SR 520, Interlaken Park, and E. Howe Street. Greater Capitol Hill contains the Harvard-Belmont Historic District, Volunteer Park, and several properties individually listed in the NRHP, as well as several designated Seattle Landmarks. However, none of these properties are located in North Capitol Hill. The North Capitol Hill area is a mixture of historic buildings, mid-century buildings, and newer, contemporary buildings. Mainly residential, it also has several commercial buildings and institutional properties. There are also several older buildings that have been substantially remodeled and now appear contemporary in style. A limited survey of the area immediately surrounding this building performed for the purposes of this project found several examples of newer construction and extensive remodels. While North Capitol Hill has strong physical boundaries and is a cohesive community, it has no recognized historic properties and appears unlikely to be eligible as a historic district.

**Description of Physical Appearance**

This is a single family residence constructed in 1959. It had an extensive remodeling in 1985 that appears to have been substantially a rebuild, giving the house a modern Contemporary style. No visual evidence remains of the 1959 appearance. The house is two stories over a basement, and has an irregular footprint. It has a flat roof with a parapet, and the exterior of the building is smooth stucco. The front façade contains several large plate glass windows of tinted glass, along with large sliding glass doors. Both the first and second floors have balconies with brick trim and iron railings. The center section of the front façade steps out and is curved on the south corner. The entry is in this section, but is not visible inside the entryway. There is a stucco chimney on the south elevation. There is a garage with a paneled roll-up door in the basement of the house, as well as a second attached garage on the north elevation. A separate building located to the southwest of the main house holds an office. This building has a front gable roof, is clad in T1-11 and appears to date from the 1980s or later.

While North Capitol Hill has strong physical boundaries and is a cohesive community, it has no recognized historic properties and appears unlikely to be eligible as a historic district.

---

**Description of Physical Appearance**

This three-story, single family residence from 1905 was designed by architect Harold Malstrom. The front façade retains some of the Craftsman elements from the original design, but the rear elevation has been heavily altered. The front façade is obscured by fencing and landscaping, but the second and third floors are still visible from the public right of way. The original house had a rectangular footprint and was only two stories. It had a hipped roof with deep eaves and a hipped dormer on the front, part of which remains incorporated into the current roof. The first floor is clad in narrow wood siding, while the second (and now third) story has wider wood siding. A wide, flat band separates the first floor cladding from the second. On the front elevation, the southern corner projects out under a separate hip, and has a large single light window with a multi-light transom. The front entry is set on the north side of the front façade under a hipped roof with deep overhangs and exposed rafter tails, supported on two boxed columns. Above the entry is another original large single light window with a multi-light transom. The dormer window has been replaced with a single light window. A third story has been added and a new hipped roof has been added on top of the original, extending the ceiling height. Much of the original roof remains as a skirt around the building. A brick chimney extends through the center ridge of the new roofline. All windows on the third floor, side elevations, and rear elevation are new. The rear elevation has an “L” addition that extends west on the first floor, with a storage area on the ground floor that has a decorative metal door, and a roof deck on the second floor with metal railings. Both the first and second floors have multiple large, fixed plate glass windows. The third floor is a large gabled dormer with slanted sides, completely glazed. There is a separate ground floor, two-car garage at the rear, clad in narrow wood siding with a hipped roof and a paneled roll-up door.

**Property appears to meet criteria for the National Register of Historic Places:** Yes

**Property is located in a potential historic district (National and/or local):** No

**Property potentially contributes to a historic district (National and/or local):**

---

This is the oldest of three historic school buildings on this property. Known as the Denny-Fuhrman School, it was originally built in 1893 facing east onto Boylston Avenue, located on the same square but northeast from its current location. In 1899 it had an addition that doubled its size and resulted in the current footprint, roofline, and arched entries. It was relocated to its present site in 1917. The building was renovated in 1997-1998 and reopened in September 1999, along with the rest of the complex. This building is listed in the Washington Heritage Register and is a designated Seattle Landmark. The Seattle Landmark Nomination Form (1980) notes that it is one of only two 19th century frame schoolhouses remaining in Seattle, and states that it is of "unique significance in representing the history of early public education in Seattle." The nomination form for the WHR (1973) says that it is "the oldest frame school building in a generally unaltered state in the city of Seattle," and that it is the only one-room school house remaining in the city. Originally the school served all eight grades in one room, but by 1897, enrollment had risen to 70 and three classrooms were established (Corley 1973). By 1904, the enrollment was 206, and the school board built the school building that is now to the north of this one, facing Franklin Avenue East. The buildings were then renamed "Seward School" for Secretary of State William Henry Seward (1801-1872), who had negotiated the purchase of Alaska (Long 2001). The Alaska-Yukon-Pacific Exposition held on the University of Washington campus in 1909 brought new ease of transportation and great exposure to the Eastlake neighborhood. Eastlake Avenue was graded and the streetcar lines were extended north. By 1914, more than 400 pupils attended Seward Elementary School, reflecting the growth and development of the Eastlake area. In 1932, enrollment was about 580, and Seward became a demonstration school, meaning teachers from all over the school district attended half-day sessions there to observe the latest teaching methods and materials. In 1950, Seward School's boundaries were expanded when the nearby Cascade School was destroyed in an earthquake. This growth continued until the construction of I-5 in the 1960s, which bisected the neighborhood and contributed to declining enrollment.

Although the building has been relocated, it was within the same block and within 25 years of its construction. Its renovation in 1997-98 re-established the basement that was lost in the move and appears to have been respectful of the historic design and materials of the building. The building retains good integrity, despite some impact to its integrity of location, and impact to its setting from the construction of I-5 and SR2520 in the 1960s. As stated in the Seattle Landmark Nomination Form, "The greatest significance of the Seward School site ... lies in the fact that the three buildings have been grouped on the same site to form a small campus which illustrates the development of public school architecture from the end of the 19th century through the first two decades of the 20th." This building, along with the other two historic school buildings on the property, is eligible for the NRHP under Criterion A for its association with education in Seattle and the development of the Eastlake community, and under Criterion C for its distinctive characteristics of a type and period of architecture as an excellent example of a late 19th century public school building.
**Description of Physical Appearance**

The building is one story over a full, finished basement and has a rectangular footprint. The roof consists of three hipped sections - two parallel hips running north/south on the east and west portions of the building, and one hip joining them, running east/west along the north side of the building - and a center flat roof that extends to the edge on the south side. The hipped sections are clad in composition shingle, while the flat section appears to be built up asphalt. The roof has 3-foot deep eaves with exposed rafter tails all the way around, giving uniformity to the roofline. The exterior of the building is clad in wood clapboards, with vertical wood siding covering the basement level. Both the east and west elevations feature two banks of six 6/6 double hung windows. On the east side, a low projection of concrete below the window sills is roofed with a row of opaque glass panes that appear to allow light into the basement level. This probably dates from the 1997-98 renovation. On the west side, the ground elevation drops away in a steep slope. When the school was moved in 1917, the original basement was not recreated, and the building was placed on brick piers. As part of the 1997-98 renovation, the building was converted back to a K-8 elementary school, and the basement level, which is a full story and highly visible on the west side, was made into usable space. It is likely that at that time the current ground floor openings on the west elevation were introduced, including center double-leaf doors with six lights each, flanked by single leaf, solid doors with one small square window. The doors are all shielded by metal awnings. On the side of each single door are four 4/4 windows. The yard area adjacent to this elevation is fenced with a chain link fence and filled with playground equipment. On the north and south elevations, a large arched opening in the center of the elevation indicates where the original building was joined to the 1899 addition. The entry to the building is recessed inside this archway, and features double-leaf doors of six lights with panels below, flanked by five-light sidelights with a panel at the bottom. The wall inside this recessed entry has a vertical beaded board wainscot. The walls to the side of the door are slanted to meet the outside wall, and each have a 9/9 window. Modern concrete steps and metal picket handrails access the door from E. Louisa Street. The building is joined to the 1905 school building to the north by a one story, shed-roofed connecting structure. This structure sits over a full basement, is clad in narrow wood clapboards, and reflects the design of the connected 1905 building.

Property appears to meet criteria for the National Register of Historic Places: No

Property is located in a potential historic district (National and/or local): No

Property potentially contributes to a historic district (National and/or local):

Statement of Significance
This residence from 1917 was extensively remodeled in 1965, and little remains visually of the original building. As a result of this remodeling, the property no longer has integrity of design, materials, workmanship, or feeling. In addition, the construction of I-5 and SR 520 in the 1960s impacted its integrity of setting. It retains only integrity of location and association. It does not retain sufficient integrity to convey its history, and therefore is not eligible for the NRHP.

Description of Physical Appearance
This is a three story residential building with a rectangular footprint. Built in 1917, it was remodeled in 1965 and no visible appearance remains of the original building. It now houses seven apartments. The flat roof has a slight eave on the front and rear elevations, but is flush along the sides, and is likely not original. The building appears to have originally been two stories, but had a third story added, along with the flat roof, in 1965. The exterior is mostly clad in stucco panels, except for an inset balcony on the third floor that has wood T1-11 vertical siding. The entry door is slightly recessed and has a wood paneled door flanked by single-light sidelights. It is accessed via brick steps with metal pipe railings. All windows appear to be modern vinyl replacements, and are a combination of two-light sliding sash, and plate glass flanked by single sliding sash. Above the door a vertical screen extends out from the building, reaching to the roofline. It is composed of narrow vertical wooden slats. The same theme is repeated in the railing of the one recessed front balcony in the southern corner. An exterior brick chimney remains on the south elevation.

NARRATIVE SECTION

Date Of Construction: 1914

Architect: Unknown

Builder: Unknown

Engineer: Unknown

Property appears to meet criteria for the National Register of Historic Places: No

Property is located in a potential historic district (National and/or local): No

Property potentially contributes to a historic district (National and/or local):

Statement of Significance

This residence from 1914 was extensively remodeled, probably in the 1960s or 1970s, and little remains visually of the original building. As a result of this remodeling, the property no longer has integrity of design, materials, workmanship, or feeling. In addition, the construction of I-5 and SR520 in the 1960s impacted its integrity of setting. It retains only integrity of location and association. It does not retain sufficient integrity to convey its history, and therefore is not eligible for the NRHP.

Description of Physical Appearance

This residence, built in 1914, has a rectangular footprint. It has been extensively remodeled, probably in the 1960s or 1970s. It is now a triplex. No entry to the house is visible. The front elevation is dominated by a large brick exterior chimney, which pierces the apron of the mansard roof. The roof covers the entire second story and is likely not original. It is clad in composition shingle. The first floor of the house is clad in wood shingles, and has a pair of 6/1 windows on either side of the chimney. These windows are flanked by small, inoperable shutters. Above these windows on the second story are two pairs of windows in a modern, vertical shape. They are aluminum framed, single-light plate glass with a single-light awning sash at the top.

NARRATIVE SECTION

Date Of Construction: 1914
Architect: Unknown
Builder: Unknown
Engineer: Unknown

Property appears to meet criteria for the National Register of Historic Places: No
Property is located in a potential historic district (National and/or local): No
Property potentially contributes to a historic district (National and/or local): No

Statement of Significance
This residence from 1914 is a representative example of the early twentieth century houses found in the Eastlake neighborhood. Available research did not reveal any associations with significant persons or events, and the house is not particularly architecturally distinctive, does not represent the work of a master, nor possess high artistic value. In addition, it has suffered some loss of integrity of design, materials, and setting from window sash replacements, a rear addition, and the subdivision of the property. In addition, its setting was compromised by the construction of I-5 in the 1960s. Therefore, it is not eligible for the NRHP under any criteria.

The Eastlake neighborhood was first developed in the 1880s. It contains an interesting mixture of apartment buildings, single family residences, and commercial structures. Its current boundaries were defined by the construction of I-5, which cut off Eastlake from adjacent Roanoke Park and the rest of Capitol Hill. During the 1960s and 1970s, the neighborhood suffered demolitions and less than sensitive infill in many locations, but still retains a high number of historic buildings. The Eastlake neighborhood is not a historic district (NRHP or local), therefore this property is not a contributing element of any historic district.

Description of Physical Appearance
This is a two story, single family, Colonial-Revival style residence with a rectangular footprint. It has a gambrel roof of composition shingle with a shed roofed dormer across the front elevation, and a front gable over the entry. The house is clad in wood shingle and has a substantial brick, exterior chimney on the south elevation. Although the front yard is surrounded by a wood fence, the front elevation is still mostly visible. It has a projecting center entry with an arched spandrel supported on a heavily molded broken bed pediment over a pair of Tuscan columns. The door is wood paneled, flanked by multi-light sidelights, with a molded transom area. On both sides of the entry are paired one-over-one windows. Most windows in the house are 1/1, but they appear to be replacement sash. It is likely that the shed-roofed front dormer is not original. There is also a two story, shed-roofed addition on the rear of the house. The rear half of the lot appears to have been subdivided and sold, as a building constructed in 1999 now occupies that lot.

NARRATIVE SECTION

Date Of Construction: 1928

Architect: B. Dudley Stuart
Builder: unknown
Engineer: unknown

Property appears to meet criteria for the National Register of Historic Places: Yes

Property is located in a potential historic district (National and/or local): No

Property potentially contributes to a historic district (National and/or local): No

Statement of Significance

This apartment building from 1928, known as the Shelby, has very good physical integrity. Its setting has been impacted by the construction of I-5 immediately to the east, but the property remains intact in all other six aspects. It is eligible for the NRHP under Criterion C, within the context of the Multiple Property Listing for Seattle Apartments, 1900-1957, accepted by the WA SHPO on 11/20/08 and listed in the NRHP 1/9/09. It meets all of the registration requirements listed in the Multiple Property Listing - purpose built apartment building; constructed between 1900 and 1957; very good integrity; more than five self-sufficient dwelling units, each with private kitchen and bath; and within the Seattle corporate limits.

The Shelby was designed by B. Dudley Stuart (1885-1977), an architect noted for his many apartment building designs. Born in London, Stuart moved to Seattle in 1918. "His partnership with Arthur Wheatley (1925-30) specialized in larger apartment buildings, including the Biltmore (1924), the Highland (1924), the Exeter Hotel (now Exeter House, 1927), the Bergonian (now the Mayflower Park Hotel, 1927), and the smaller Marianne apartments (1930) on Queen Anne. During World War II he practiced with two pioneering Modernist architects, Paul Hayden Kirk and Robert Durham. After the war, he continued developing apartment designs with Durham, until 1977. These projects, showing the influence of Modernism and new materials on post-war apartment design, include Aloha Terrace (1947) and Queen Vista (1949) and two large complexes, Shorewood Apartments on Mercer Island and Laurelton Terrace near Laurelhurst" (Sheridan 2008).

Description of Physical Appearance

This is a four story apartment building from 1928 over a full basement. It has a modified L-shaped plan, with the long end of the "L" having a diagonal wall along part of the east side, giving it a somewhat triangular shape at the northern end. It is wood-framed construction clad in light brown brick veneer with cream terra cotta trim and ornament, reflecting elements of the Collegiate Gothic style. This was a popular style in the 1920s for apartment blocks in Seattle. The entry is located at the interior apex of the "L" on the east elevation, and is highlighted by a terra cotta section that covers the first three floors. This section containing the entry is three bays wide and steps out slightly. The double-leaf entry doors are recessed and are wood with segmental arch windows, topped by a large transom with gold leaf letters that spell "The Shelby." The doors are reached through a wide terra cotta arch with a decorative cornice above featuring scroll work, quatrefoils with floral centers, and an ornamented shield in the center. Next to the arch, centered above the first floor windows, are two terra cotta quatrefoils above a terra cotta band. Over the door, the terra cotta continues up, enclosing two 10/1 windows on the second and third floors within a pair of rounded pilasters, with a row of shields in a panel between the two windows. Above the third floor window is another decorative panel, and the pilasters terminate in small foils. Windows in the building are very intact with only a few replacements and have leaded muntins. They are a combination of 8/1, 6/1, and 10-light casements, some paired and some single. They have terra cotta sills. Another terra cotta band wraps around the building at the height of the first floor window sills. The building has slightly projecting sections at regular intervals, generally where the windows are paired, which serves to break up the long mass of the elevations. The building has a flat roof with a parapet that steps up corresponding to places where the building plan steps out. The parapet has terra cotta coping and is set off by a terra cotta band. It also displays terra cotta ornament, including quatrefoils and arched niches with inset crosses. On the rear elevation, the basement level is visible due to a change in elevation. This level is clad in a cream colored, rusticated stucco. The window configuration from the upper floors continues here, and there is a small pedestrian door and a roll-up garage door. The parapet on this elevation features decorative brick patterning, with dark brick in a diamond pattern.

Comments: northeast corner

Page 1 of 3 Printed on 7/6/2009 2:20:15 PM
This American Foursquare Craftsman-style house from 1907 has very good physical integrity and is one of the oldest remaining houses in an area dominated by 1920s buildings and newer construction. Its setting has been compromised by the construction of I-5 immediately to the east of the property, and by the demolition of the house next door to the south, as well as by the newer construction to the immediate north. The house is an excellent example of an American Foursquare in the Craftsman style, with very few alterations to the design or materials. It is individually eligible for the NRHP under Criterion C for its distinctive architectural characteristics.

The house is located in the Eastlake neighborhood, which was first developed in the 1880s. It contains an interesting mixture of apartment buildings, single family residences, houseboats, and commercial structures. Its current boundaries – east of Lake Union, south of University Bridge, west of I-5, and north of Mercer Street - were defined by the construction of I-5, which cut off Eastlake from adjacent Roanoke Park and the rest of Capitol Hill. During the 1960s and 1970s, with the construction of I-5, the neighborhood suffered demolitions and less than sensitive infill in many locations, as well as inappropriate renovations, but still retains many intact historic buildings. It also contains a substantial amount of new construction. Much of the history of the Eastlake neighborhood centers on Lake Union and maritime development and industry. In 1916 Boeing’s first factory was located on the shores of Lake Union at the foot of Roanoke Street. The neighborhood is home to the National Historic Landmark Schooner Adventuress on Lake Union and the WHR-listed Tugboat Chickamauga, docked at 1515 Fairview Avenue East. The Eastlake neighborhood contains one individually listed structure in the NRHP - the University Bridge that spans the Lake Washington Ship Channel to connect Eastlake to the University area. The only historic district in Eastlake is the WHR-listed Tensas Chuck Moorage historic district at 2331-2339 Fairview Avenue East, composed of docks and houseboats on Lake Union. The most historically significant and intact buildings in the area along the I-5 corridor have been designated as Seattle Landmarks. The three buildings of the Seward School at 2515 Boylston Avenue E. form a designated Seattle Landmark. This site also has one building listed in the WHR - the Denny-Fuhrman School on East Louisa, between Franklin Avenue East and Boylston Avenue East. There are also two early Queen Anne-style houses in this area that are designated Seattle landmarks at 2819 and 2622 Franklin Avenue E., along with the Seattle Landmark L'Armourita Apartments at 2901-2917 Franklin Avenue E. A limited survey of the Eastlake neighborhood performed for the purposes of this project found several examples of newer construction and extensive remodels mixed in with historic buildings from the early twentieth century through the 1920s. While Eastlake has strong physical boundaries and is a cohesive community, the area of the neighborhood adjacent to I-5 appears unlikely to be eligible as a historic district due to the high number of intrusions.

NARRATIVE SECTION

Date Of Construction: 1909

Property appears to meet criteria for the National Register of Historic Places: Yes

Property is located in a potential historic district (National and/or local): No

Property potentially contributes to a historic district (National and/or local):

Statement of Significance

L'Amourita is an apartment building from 1909 built by Adolph J. Jarmuth. "According to the Seattle Times, Mr. Jarmuth 'built the L'amourita whole-piece and lived with his family in its first apartment at the corner of Franklin Avenue and Shelby Street for the first two years only. In the beginning there were only eight apartments, described in the Seattle Times then as 'divided by concrete walls and having from seven to nine rooms.' The building, said The Times, was 'the first of its kind in Seattle'" (Dorpat). It is unique for its ornate Mission Revival style, uncommon in Seattle.

L'Amourita has very good physical integrity. Its setting has been impacted by the construction of I-5 immediately to the east, but the property remains intact in all other six aspects. It is eligible for the NRHP under Criterion C, within the context of the Multiple Property Listing for Seattle Apartments, 1900-1957, accepted by the WA SHPO on 11/20/08 and listed in the NRHP 1/9/09. It meets all of the registration requirements of the Multiple Property Listing - purpose built apartment building; constructed between 1900 and 1957; very good integrity; more than five self-sufficient dwelling units, each with private kitchen and bath; and within the Seattle corporate limits. It is also a designated Seattle Landmark.

Description of Physical Appearance

This is a three story, concrete apartment building completed in 1909 in the Mission Revival style. It has an irregular footprint, mostly due to the lightwells on the rear elevation. It is clad in smooth stucco and has a side gable clay tile roof with hips and projecting gables on the east side, and a flat, built up roof on the four west side sections. Its façade is divided into three segments: a central segment with a first floor arcaded veranda with a flat roof, flanked by two side segments that are topped with curvilinear parapets and enhanced by first floor, arched entry porches with hipped roofs. Each of these three segments contains a primary entry for the building. The front and side gables terminate in curvilinear parapets, and these sections have three-sided projecting bays with tiled, hipped roofs. The center section is the tallest and reads as a tower with a hipped roof. Under the roof on the upper floor is a row of arched windows with a row of corbelling below. On the second floor, a rooftop terrace sits above the center entry porch. The outer corners of the building on the façade terminate in small decorative, hipped roof towers. Between the center section and side sections are round arched dormers with diamond-patterned arched sash. Windows in the building are typically double hung with wood frames, and are a combination of flat, arched, and reverse arched upper sash. Some have decorative multi-light upper sash, while others are 1/1.

Property appears to meet criteria for the National Register of Historic Places: **Yes**

Property is located in a potential historic district (National and/or local): **No**

Property potentially contributes to a historic district (National and/or local):

This is a 6-unit apartment block from 1927. (There is also a matching building next door at 2923 Franklin Avenue E., discussed on a separate survey form.) This building has very good physical integrity. Its setting has been impacted by the construction of I-5 immediately to the east, but the property remains intact in all other six aspects. It is eligible for the NRHP under Criterion C, within the context of the Multiple Property Listing for Seattle Apartments, 1900-1957, accepted by the WA SHPO on 11/20/08 and listed in the NRHP 1/9/09. It meets all of the registration requirements listed in the Multiple Property Listing - purpose built apartment building; constructed between 1900 and 1957; very good integrity; more than five self-sufficient dwelling units, each with private kitchen and bath; and within the Seattle corporate limits.

The building is located in the Eastlake neighborhood, which was first developed in the 1880s. It contains an interesting mixture of apartment buildings, single family residences, houseboats, and commercial structures. Its current boundaries – east of Lake Union, south of University Bridge, west of I-5, and north of Mercer Street - were defined by the construction of I-5, which cut off Eastlake from adjacent Roanoke Park and the rest of Capitol Hill. During the 1960s and 1970s, with the construction of I-5, the neighborhood suffered demolitions and less than sensitive infill in many locations, as well as inappropriate renovations, but still retains many intact historic buildings. It also contains a substantial amount of new construction. Much of the history of the Eastlake neighborhood centers on Lake Union and maritime development and industry. In 1916, Boeing's first factory was located on the shores of Lake Union at the foot of Roanoke Street. The neighborhood is home to the National Historic Landmark Schooner Adventuress on Lake Union and the WHR-listed Tugboat Chickamauga, docked at 1515 Fairview Avenue East. The Eastlake neighborhood contains one individually listed structure in the NRHP - the University Bridge that spans the Lake Washington Ship Channel to connect Eastlake to the University area. The only historic district in Eastlake is the WHR-listed Tensas Chuck Moorage historic district at 2331-2339 Fairview Avenue East, composed of docks and houseboats on Lake Union. The most historically significant and intact buildings in the area along the I-5 corridor have been designated as Seattle Landmarks. The three buildings of the Seward School at 2515 Boylston Avenue E. form a designated Seattle Landmark. This site also has one building listed in the WHR - the Denny-Fuhrman School on East Louisa, between Franklin Avenue East and Boylston Avenue East. There are also two early Queen Anne-style houses in this area that are designated Seattle landmarks at 2819 and 2622 Franklin Avenue E., along with the Seattle Landmark L’Armourita Apartments at 2901-2917 Franklin Avenue E. A limited survey of the Eastlake neighborhood performed for the purposes of this project found several examples of newer construction and extensive remodels mixed in with historic buildings from the early twentieth century through the 1920s. While Eastlake has strong physical boundaries and is a cohesive community, the area of the neighborhood adjacent to I-5 appears unlikely to be eligible as a historic district due to the high number of intrusions.

This is a two story, six unit apartment building from 1927 that has an identical building next door at 2923 Franklin Avenue E., covered on a separate form. It has a rectangular footprint, and is wood framed construction clad in brick veneer. It has a hipped roof of composition shingle with deep boxed eaves, and retains a brick exterior chimney on the south elevation. The front façade is symmetrical, with a center entry on the first floor which is reached via brick steps edged with a curvilinear wall. The entry porch is poured concrete with a metal railing that is probably not original. The entry door is plate glass in a wood frame, flanked by single-light side lights. It is framed with a dramatic green terra cotta pedimented surround composed of a pair of fluted Doric columns with a full entablature, topped by a balustrade with a center panel featuring a row of swags. The front façade window sills and keystones above the first floor windows are also this same green terra cotta. The front façade windows are wood framed with leaded muntins. The four main windows are symmetrically placed and contain a 10/1 center window flanked by two 6/1 windows. There is another smaller window above the center entry and it is a 24-light awning sash. NARRATIVE SECTION

Property appears to meet criteria for the National Register of Historic Places:  No

Property is located in a potential historic district (National and/or local):  No

Property potentially contributes to a historic district (National and/or local):

This single family residence from 1930 is located on what remains of a parcel that was mostly used for the footprint of I-5. Its setting was heavily impacted by the construction of I-5, leaving the house no longer primarily from Franklin Avenue E. It is now reached via an alleyway from E. Allison Street. Numerous alterations and additions have impacted the property's integrity of design, materials, feeling, and workmanship. It does not display distinctive characteristics, is not the work of a master, and does not possess high artistic value. Available research did not reveal any associations with significant persons or events. The property retains little integrity and does not meet any of the criteria necessary to qualify for listing in the NRHP. Therefore it is not eligible for the NRHP.

The house is located in the Eastlake neighborhood, which was first developed in the 1880s. It contains an interesting mixture of apartment buildings, single family residences, houseboats, and commercial structures. Its current boundaries – east of Lake Union, south of University Bridge, west of I-5, and north of Mercer Street - were defined by the construction of I-5, which cut off Eastlake from adjacent Roanoke Park and the rest of Capitol Hill. During the 1960s and 1970s, with the construction of I-5, the neighborhood suffered demolitions and less than sensitive infill in many locations, as well as inappropriate renovations, but still retains many intact historic buildings. It also contains a substantial amount of new construction. Much of the history of the Eastlake neighborhood centers on Lake Union and maritime development and industry. In 1916 Boeing's first factory was located on the shores of Lake Union at the foot of Roanoke Street. The neighborhood is home to the National Historic Landmark Schooner Adventuress on Lake Union and the WHR-listed Tugboat Chickamauga, docked at 1515 Fairview Avenue East. The Eastlake neighborhood contains one individually listed structure in the NRHP - the University Bridge that spans the Lake Washington Ship Channel to connect Eastlake to the University area. The only historic district in Eastlake is the WHR-listed Tensas Chuck Moorage historic district at 2331-2339 Fairview Avenue East, composed of docks and houseboats on Lake Union. The most historically significant and intact buildings in the area along the I-5 corridor have been designated as Seattle Landmarks. The three buildings of the Seward School at 2515 Boylston Avenue E. form a designated Seattle Landmark. This site also has one building listed in the WHR - the Denny-Fuhrman School on East Louisa, between Franklin Avenue East and Boylston Avenue East. There are also two early Queen Anne-style houses in this area that are designated Seattle landmarks at 2819 and 2622 Franklin Avenue E., along with the Seattle Landmark L'Armourita Apartments at 2901-2917 Franklin Avenue E.. A limited survey of the Eastlake neighborhood performed for the purposes of this project found several examples of newer construction and extensive remodels mixed in with historic buildings from the early twentieth century through the 1920s. While Eastlake has strong physical boundaries and is a cohesive community, the area of the neighborhood adjacent to I-5 appears unlikely to be eligible as a historic district due to the high number of intrusions.

This is a two story, single family residence with a rectangular footprint. The original building section is concrete block on the first floor and wood frame on the second, with the second floor clad in T1-11. This section has a flat roof behind a low parapet. A shallow metal balcony with pipe railing has been added to the second floor west elevation. All windows have been replaced with 1/1 vinyl, except the two on the second floor west elevation which are now large fixed plate glass windows. A small first floor addition has been made on the north elevation, sitting on small concrete and wood footings. This addition is clad in T1-11 and has a recessed center entry which appears to be the main entry for the house. It has vinyl windows - two 1/1 and one sliding sash. Above this is a larger second floor addition which extends out beyond the original house on the north, east and west elevations. It is cantilevered out over the first floor addition and supported on a metal brace on the west side and a wooden post on the east side. This addition is also clad in T1-11, with a mix of vinyl and aluminum windows, mostly sliding sash, with two single-light. This section has a shed roof with exposed rafter tails on the north elevation. A stair with wooden railings comes down to the first floor level from the higher grade Franklin Avenue side of the property.

Date Of Construction: 1909

Architect: Unknown
Builder: Unknown
Engineer: Unknown

Statement of Significance
This residence from 1909 is located in the North Capitol Hill neighborhood. Available research did not reveal any associations with significant persons or events, and the house does not represent the work of a master, nor possess high artistic value. However, it does embody distinctive characteristics of the Queen Anne style and has very good physical integrity. Its setting has been somewhat impacted by the construction of I-5 to the west and northwest, but the impact is lessened by the buffer of the adjacent blocks to the west and north. It has had a rear addition but this is not visible from the public right of way. This property appears to be individually eligible for the NRHP under Criterion C.

Property appears to meet criteria for the National Register of Historic Places: Yes

Property is located in a potential historic district (National and/or local): No

Property potentially contributes to a historic district (National and/or local): No

Description of Physical Appearance
This is a one-and-a-half story, single family house in the Queen Anne style, was constructed in 1909. It has an irregularly shaped footprint and a bellcast hipped roof of composition shingle. The roof has three bellcast hipped dormers - one on the front roof slope, and one each on the side elevations forming a cross hip. The roof and dormers have deep open eaves with exposed rafter tails. The body of the house is clad in narrow wood clapboards, and the dormers are clad in wood shingles. The façade is asymmetrical, and features a full-width porch under the main roof, supported on irregularly spaced boxed columns with molded trim. Each column is flanked by a pair of curved brackets. The beam above the columns is ornamented with denticulated molding. The porch is accessed by masonry steps between painted brick knee walls and has wooden railing. The entry door is wooden and has three long, narrow, arched window panes. Next to the door is a single, awning sash window in a decorative leaded glass pattern. The transom above the awning window has the same decorative glass pattern as the awning window next to the door, but is all colored glass panes. Dormer windows are paired 1/1, with this same pattern in leaded glass in the upper sashes. The house has a rear addition that is not visible from the street. It appears that the original house had a rectangular footprint but the rear addition gives it the current irregular plan. There is a separate, detached garage at the rear of the property that features the same bellcast hipped roof as the house.

NARRATIVE SECTION

Date Of Construction: 1909

Architect: Unknown
Builder: Unknown
Engineer: Unknown

Property appears to meet criteria for the National Register of Historic Places: No

Property is located in a potential historic district (National and/or local): No

Property potentially contributes to a historic district (National and/or local):

This residence from 1909 is located in the North Capitol Hill neighborhood. Available research did not reveal any associations with significant persons or events, and the house does not represent the work of a master, nor possess high artistic value. While it is a representative example of an American Foursquare in the Prairie style, it has suffered loss of integrity of design, feeling, workmanship and materials from replacement of the front door and the exterior siding. Its setting has been severely impacted by the construction of I-5 to the west and northwest. Due to a lack of integrity, the property is not individually eligible for the NRHP.

The house is located in the North Capitol Hill neighborhood, bound by I-5, SR 520, Interlaken Park, and E. Howe Street. Greater Capitol Hill contains the Harvard-Belmont Historic District, Volunteer Park, and several properties individually listed in the NRHP, as well as several designated Seattle Landmarks. However, none of these properties are located in North Capitol Hill. The North Capitol Hill area is a mixture of historic buildings, mid-century buildings, and newer, contemporary buildings. Mainly residential, it also has several commercial buildings and institutional properties. There are also several older buildings that have been substantially remodeled and now appear contemporary in style. A limited survey of the area immediately surrounding this building performed for the purposes of this project found several examples of newer construction and extensive remodels. While North Capitol Hill has strong physical boundaries and is a cohesive community, it has no recognized historic properties and appears unlikely to be eligible as a historic district.

Description of Physical Appearance

This is a two-story, single family, American Foursquare residence in the Prairie style. It has a rectangular footprint and a hipped roof of composition shingle. The roof has deep eaves with decoratively carved exposed rafter tails. It has four hipped dormers, one on each elevation, that also display these rafter tails. Windows in the dormers are paired, single-light, sliding sash vinyl replacements. There are two small skylights in the roof near the ridgeline on the north and south elevations. There is an interior red brick chimney near the ridgeline on the south elevation, east of the side dormer. The exterior of the house is clad in asbestos or concrete shingles. The house has a full-width front porch under a hipped roof, supported on three boxed columns. The porch has a low wall in lieu of railing. The façade is symmetrical, with the entry on the south side of the front elevation. The entry door is a replacement and has an oval window above a single panel. It is flanked by a pair of decorative, colored, leaded glass sidelights that sit above a wood panel and a row of dentil molding. The window on the first floor façade is a tripartite window with a larger center window flanked by narrower side windows. They are 1/1, with decorative leaded glass upper sashes. On the second floor, the corners project out under hipped roofs, typical of the "Seattle Box" style. Each of these has a large plate glass window with a leaded glass transom. In the center of the second floor front elevation is a smaller, square, leaded glass window that also projects out slightly, with a louvered vent above it. The property is surrounded by a modern iron fence and dense landscaping.

NARRATIVE SECTION

Statement of Significance

This building from 1911 is located adjacent to the potential Roanoke Park historic district, but is outside the suggested boundaries, separated from it by SR 520. Available research did not reveal any associations with significant persons or events, and the building does not represent the work of a master, nor possess high artistic value. It is a representative example of Arts and Crafts/Prairie style architecture with good physical integrity, although its setting has been dramatically impacted by the construction of I-5 immediately to the west and to a lesser extent by SR 520 to the north. The 1917 Sanborn Map corrected to 1950 shows that only the houses to the west and the south, and the two houses to the immediate north, remain after the I-5/SR 520 construction. One of these two houses remaining to the north was relocated and turned 90 degrees. This corner property, once part of a neighborhood, is now isolated at the edge of the confluence of two interstates, with only one other corner building remaining. Despite the impact to the setting, this property is eligible for the NRHP under Criterion C for its distinctive architectural characteristics, representative of its Arts and Crafts/Prairie style.

The building is located in the North Capitol Hill neighborhood, bound by I-5, SR 520, Interlaken Park, and E. Howe Street. Greater Capitol Hill contains the Harvard-Belmont Historic District, Volunteer Park, and several properties individually listed in the NRHP, as well as several designated Seattle Landmarks. However, none of these properties are located in North Capitol Hill. The North Capitol Hill area is a mixture of historic buildings, mid-century buildings, and newer, contemporary buildings, and was heavily impacted by construction of I-5 and SR 520. Mainly residential, it also has several commercial buildings and institutional properties. There are also several older buildings that have been substantially remodeled and now appear contemporary in style. A limited survey of the area immediately surrounding this building performed for the purposes of this project found several examples of newer construction and extensive remodels. While North Capitol Hill has strong physical boundaries and is a cohesive community, it has no recognized historic properties and appears unlikely to be eligible as a historic district.

Description of Physical Appearance

This building appears to have originally been built as a duplex, but is now six condominium units. It was renovated in 1960. It displays elements of the Arts and Crafts/Prairie style. It is two stories over a full basement with a finished attic space, and has a rectangular footprint. It is clad in brick veneer, with wood shingles on the dormers, and vertical wood siding on the bay windows. It has a hipped roof of composition shingle with deep, boxed eaves and a wide flat fascia board. There are two hipped dormers on each elevation, most with replacement, tripartite windows. The building has a symmetrical façade, with a central front porch under a hipped roof supported on replacement iron posts set on a concrete wall. The porch contains the two front entries, which each have a glazed door flanked by replacement leaded glass sidelights. Above the porch are two projecting, three-sided bays clad in vertical wood siding with original 25/1 windows on the front and 20/1 windows on the sides. The other four large windows on the front façade also retain their original sashes with multi-light upper sashes. The building retains two brick chimneys, one each on the east and west elevations. A metal fire stair has been added to the rear of the building, and a covered carport on the west side of the building.

**Statement of Significance**

This residence from 1910 is located in the North Capitol Hill neighborhood, adjacent to I-5. Available research did not reveal any associations with significant persons or events, and the house does not represent the work of a master, nor possess high artistic value. It is a representative example of Arts and Crafts/Prairie style architecture and has good physical integrity, although its setting has been dramatically impacted by the construction of I-5 immediately to the west and to a lesser extent by SR 520 to the north. The 1917 Sanborn Map corrected to 1950 shows that only the houses to the west and the south remain after the I-5/SR 520 construction, and the house to the immediate north at 2412 Broadway was relocated and turned 90 degrees, leaving this house at 2408 Broadway exposed on the east side, with the rear of 2412 facing its side elevation. This property, once part of a neighborhood, is now isolated at the edge of the convergence of two interstates. Despite the impact to the setting, this property is eligible for the NRHP under Criterion C for its distinctive architectural characteristics, representative of its Arts and Crafts/Prairie style.

---

**Description of Physical Appearance**

This is a two story, single-family dwelling with an attic and a full basement. Built in 1910, it displays the Arts and Crafts/Prairie style. It has a rectangular footprint and the foundation is concrete. The exterior walls are sheathed in horizontal cedar siding with wood shingles on the dormers. Originally the second floor was also sheathed in wood shingles but that has been changed to horizontal siding. The roof is hipped and of composition shingle, with open eaves and exposed rafter tails. There are hipped dormers on the front (west), and both side (north and south) elevations. The dormers are clad in wood shingles and have paired multi-light windows, as well as the same deep eaves and exposed rafter tails as the main roof. The partial-width front porch is set to the north of the front façade and is under a hipped roof that is supported by two boxed columns with corner brackets. The entry door is flanked by sidelights. To the south of the entry is a large, single pane window with a transom above. On the second floor of the front façade, there is a bay at each corner that projects out to the front and side. These bays are under their own hipped roof sections, and have brackets below them. Each one has a single light window in the center with a transom above. There is an exterior brick chimney on the south elevation. There is also a detached garage in the rear.

#### Statement of Significance

This residence from 1910 is located adjacent to the potential Roanoke Park historic district, but is outside the suggested boundaries, separated from it by SR 520. Available research did not reveal any associations with significant persons or events, and the house does not represent the work of a master, nor possess high artistic value. While it is a representative example of Arts and Crafts/Prairie style architecture with Queen Anne elements, its setting and feeling have been greatly impacted by the construction of SR 520 immediately to the north and also by I-5 to the west. Its original façade faced west, but the house was relocated and turned 90 degrees, and the full width front porch that originally adorned the façade was removed, impacting its integrity of design and workmanship. This property, once part of a neighborhood, is now isolated at the edge of the convergence of two interstates. Due to the dramatic impact to the setting and design, this property does not retain sufficient integrity to be individually eligible for the NRHP.

The house is located in the North Capitol Hill neighborhood, bound by I-5, SR 520, Interlaken Park, and E. Howe Street. Greater Capitol Hill contains the Harvard-Belmont Historic District, Volunteer Park, and several properties individually listed in the NRHP, as well as several designated Seattle Landmarks. However, none of these properties are located in North Capitol Hill. The North Capitol Hill area is a mixture of historic buildings, mid-century buildings, and newer, contemporary buildings, and was heavily impacted by the construction of I-5 and SR 520. Mainly residential, it also has several commercial buildings and institutional properties. There are also several older buildings that have been substantially remodeled and now appear contemporary in style. A limited survey of the area immediately surrounding this building performed for the purposes of this project found several examples of newer construction and extensive remodels. While North Capitol Hill has strong physical boundaries and is a cohesive community, it has no recognized historic properties and appears unlikely to be eligible as a historic district.

#### Description of Physical Appearance

This is a two story, single-family dwelling with an attic and a full basement. Built in 1910, it takes the form of the Arts and Crafts/Prairie style, but also exhibits Queen Anne elements, particularly in the gabled dormers and their ornate brackets. It has a rectangular footprint and concrete foundation. The exterior walls are horizontal cedar siding on first floor and stucco above. The roof is a gable-on-hip of composition shingle with deep boxed eaves and a wide flat fascia board. Triangular gabled dormers are on the east and west slopes of the roof, while large gabled dormers with ornately carved brackets dominate the north and south roof elevations. A brick chimney remains on the west elevation and extends up through the roof apron. Windows are original and mainly single light with a multi-light, leaded glass transom with a four-petal center. Others, such as the two small windows that flank the chimney, are simply a single sash of the decorative leaded glass. The west elevation features a three-sided, hipped roof, projecting bay near the center of the first floor, with three windows. The west elevation faces Broadway Avenue East and is now the sole street elevation, although the only entry on this side is a below-grade two-car garage with a modern, paneled roll-up door. The original façade now faces north, and the original full-width front porch has been removed. The construction of SR 520 in the mid-1960s changed the street grid and removed part of the lot for this property. The detached garage at the southwest corner of the property was demolished, and the house was relocated further south on the lot. It was turned 90 degrees, leaving the original façade isolated and nearly inaccessible. It is now obscured by a fence and heavy vegetation. An overhang has been added over the front door and entry stoop that remains. There is also a rear door on the south elevation shielded by a small balcony.

Property appears to meet criteria for the National Register of Historic Places: Yes

Property is located in a potential historic district (National and/or local): No

Property potentially contributes to a historic district (National and/or local):

Statement of Significance
This building from 1905 is located near the potential Roanoke Park historic district, but is outside the suggested boundaries, separated from it by SR 520 and the adjacent property to the rear. Available research did not reveal any associations with significant persons or events, and the building does not represent the work of a master, nor possess high artistic value. Although the house retains good physical integrity, its setting has been impacted by the construction of I-5 to the west and SR 520 to the north. Despite the impact to the setting, this property is eligible for the NRHP under Criterion C as a representative of its Arts and Crafts/Craftsman style.

The building is located in the North Capitol Hill neighborhood, bound by I-5, SR 520, Interlaken Park, and E. Howe Street. Greater Capitol Hill contains the Harvard-Belmont Historic District, Volunteer Park, and several properties individually listed in the NRHP, as well as several designated Seattle Landmarks. However, none of these properties are located in North Capitol Hill. The North Capitol Hill area is a mixture of historic buildings, mid-century buildings, and newer, contemporary buildings, and was heavily impacted by the construction of I-5 and SR 520. Mainly residential, it also has several commercial buildings and institutional properties. There are also several older buildings that have been substantially remodeled and now appear contemporary in style. A limited survey of the area immediately surrounding this building performed for the purposes of this project found several examples of newer construction and extensive remodels. While North Capitol Hill has strong physical boundaries and is a cohesive community, it has no recognized historic properties and appears unlikely to be eligible as a historic district.

Description of Physical Appearance
This is a single family residence with a rectangular footprint. It is one and a half stories over a full basement. It appears to be a transitional style between Queen Anne and Craftsman, with Queen Anne massing but some Craftsman details, especially in the front porch. It has a hipped roof of composition shingle with deep boxed eaves, and retains a red brick interior chimney on the eastern slope. It has a hipped front dormer with two 1/1 wood windows, and next to the dormer is a flat skylight. The exterior of the house is clad in wood clapboards with corner boards. The front elevation has a full-width front porch under a hipped roof, supported on four battered, wood boxed columns atop painted brick plinths. The porch railing is composed of flat wood balusters between a wood handrail and top rail. The front elevation has a pair of 1/1 wood windows and a glass entry door flanked by sidelights. On the north elevation is a projecting three-sided bay with three 1/1 wood windows and a hipped roof. Other side elevation windows are paired 1/1. There is a detached garage to the north of the house that is very simple in design and shares a north party-wall with the garage for the adjacent property. The garage has a flat roof and appears to be clad in plywood, and has a plain tilt-up garage door on the front elevation.

While North Capitol Hill has strong physical boundaries and is a cohesive community, it has no recognized historic properties and appears unlikely to be eligible as a historic district.

Description of Physical Appearance

This is a residential building in the Craftsman style with a rectangular footprint. Originally built as a single family home, it has had an addition to the south elevation that now serves as a separate commercial unit. The house has a side gable roof of composition shingle with deep eaves and visible beams in the gable ends. It retains a red brick interior chimney on the north side of the front roof slope. It has a wide shed roofed dormer that extends from the peak of the main roof and is nearly centered on the front roof slope. This dormer is clad in wood shingle and has a pair of single-light casement windows flanked by 1/1 windows. The main house is clad in wood clapboards. The front elevation features a bank of four 1/1 windows. The entry is located in the east corner of the front elevation and is recessed. It is marked by a slightly projecting front gable roof supported on a pair of square boxed columns. The gable end is ornamented with triangular panels of narrow vertical beaded board. On the north wall of the recessed entry is a horizontal window with a single-light sash flanked by a pair of 4-light sash. The door is on the western wall of the entry and has a 12-light window above two vertical panels. The porch was originally open on both the south and east sides, but the south side has been enclosed by the addition to the south elevation of the house, and the southern porch column is now engaged. The addition has a flat roof behind a stepped parapet and has an 8/1 window on the front elevation. The roof extends up above the main house roof, cuts into the edge of it, and overlaps it slightly. The side gable ends of the main house have a center recess that contains a pair of 6/1 windows.

**Property potentially contributes to a historic district (National and/or local):**

This three-part commercial building from 1930 is located in the North Capitol Hill neighborhood. Available research did not reveal any associations with significant persons or events, and the building does not represent the work of a master, nor possess high artistic value. It is a representative example of a 1930s PWA Art Deco style commercial building, although it has suffered loss of integrity of design and materials from window and door replacements, and a rear addition. Despite these alterations, this property is eligible for the NRHP under Criterion C for its distinctive architectural characteristics, representative of its PWA Art Deco style.

The building is located in the North Capitol Hill neighborhood, bound by I-5, SR 520, Interlaken Park, and E. Howe Street. Greater Capitol Hill contains the Harvard-Belmont Historic District, Volunteer Park, and several properties individually listed in the NRHP, as well as several designated Seattle Landmarks. However, none of these properties are located in North Capitol Hill. The North Capitol Hill area is a mixture of historic buildings, mid-century buildings, and newer, contemporary buildings. There are also several older buildings that have been substantially remodeled and now appear contemporary in style. A limited survey of the area immediately surrounding this building performed for the purposes of this project found several examples of newer construction and extensive remodels. While North Capitol Hill has strong physical boundaries and is a cohesive community, it has no recognized historic properties and appears unlikely to be eligible as a historic district.

**Description of Physical Appearance**

This is a one story, masonry commercial building from 1930 with three storefronts. Originally the footprint was "L" shaped, but a rear addition has made it rectangular. It has a flat roof with a stepped parapet and cast stone coping. The front and side elevations are clad in brick veneer, while the rear is painted brick. The building exhibits a PWA Moderne style, with corbeled brick detailing on vertical pilasters and distinctive, stylistic cast stone ornamentation. The three storefronts are typical early 20th century in design, with recessed center entries between large plate glass windows, topped by a row of transom windows. Although once identical, the storefronts have each received varying alterations and while still similar, they no longer share the same appearance. The storefront on the northern end, at the corner of 10th Avenue E. and E. Miller Street, retains the greatest integrity of the three. It has a recessed entry constructed of non-original red brick, and a single leaf, wood and glass entry door. On each side of the entry is a large plate glass window with a tiled bulkhead below. Above the windows and entry is a row of seven, three-light, wood framed transom windows. A modern metal and neon sign is anchored perpendicular to the front wall, centered on the building above the transoms. The northeast corner of the building is marked by a substantial brick pilaster that wraps the corner and has corbeled detailing and a cast stone plinth and capital. A matching pilaster marks the boundary between each storefront, and also anchors the southeast corner of the building. The capitals on these pilasters are ornamented with a Moderne design of a flower in a circle, surrounded by a stylized egg and dart motif, supported on waves and topped by chevrons. Additional ornament is found in the wall area above the transoms, where a pair of brick panels have cast stone sills below and floral medallions above, set into the coping. The center storefront has a large canvas, boxed awning with signage across the front elevation, covering the transoms. Above the awning is a modern interior-lit plastic sign affixed perpendicular to the center of the wall. Below the awning, the storefront walls are covered in smooth stucco. A large plate glass window occupies the north side of the storefront, with an iron railing in front of it. The center entry is a single leaf aluminum-framed glass door. The south window has been recessed, leaving a single wall projecting out to form the entry. The south window is a 12-light aluminum-framed window with wide muntins. The storefront on the south end of the building has a recessed entry with a pair of aluminum-framed glass doors, with narrow sidelights and a modern transom. On either side of the entry are three aluminum-framed plate glass windows, each topped by a two-light...

Inventory Report for

at 2351 10th Ave E, Seattle, WA 98102

fixed transom. These windows wrap the corner to form the sides of the entry with an additional plate glass window with single transom, also aluminum-framed. This storefront has a modern interior-lit plastic sign mounted perpendicular to the building, sitting on top of the parapet above the entry. This southern storefront is slightly larger than the other two and has three of the decorative brick and cast stone panels in the upper wall where the others have only two. On the E. Miller Street side of the building, a large wooden deck with lattice railing has been added for outdoor seating for the restaurant in the northern storefront space. There are two plate glass windows on this elevation, and a glass door with a modern fixed transom to access the deck. Above these windows and door is a row of four, three-light transom windows. Further west along this elevation are three additional three-light windows set high in the wall. On the rear elevation, a wood-framed addition is clad in plywood and has a shed roof of composition shingle. This addition is two stories due to the change in elevation of the site. It has a half-round canvas awning that shields two separate entry doors, one solid and one glass and wood, that face E. Miller Street. The ground floor has brick pilasters with plate glass windows in between on the rear elevation. Windows on the rear wall of the original building are vinyl sliding sash replacements.

Property appears to meet criteria for the National Register of Historic Places: No

Property is located in a potential historic district (National and/or local): No

Property potentially contributes to a historic district (National and/or local):

**Statement of Significance**

This residence from 1909 is located in the North Capitol Hill neighborhood, a few parcels south of SR 520. It is now used as a commercial property. Available research did not reveal any associations with significant persons or events, and the house does not represent the work of a master, nor possess high artistic value. It has suffered significant loss of integrity of design, feeling, materials and workmanship from window and door replacements, a large rear addition, another addition on the north elevation, and the removal of the original entry and re-orientation of the property to E. Miller Street. Its setting has been impacted by the construction of I-5 to the west and SR 520 to the north. It does not appear to meet any of the criteria for NRHP eligibility. Therefore, it is not individually eligible for the NRHP.

The house is located in the North Capitol Hill neighborhood, bound by I-5, SR 520, Interlaken Park, and E. Howe Street. Greater Capitol Hill contains the Harvard-Belmont Historic District, Volunteer Park, and several properties individually listed in the NRHP, as well as several designated Seattle Landmarks. However, none of these properties are located in North Capitol Hill. The North Capitol Hill area is a mixture of historic buildings, mid-century buildings, and newer, contemporary buildings. Mainly residential, it also has several commercial buildings and institutional properties. There are also several older buildings that have been substantially remodeled and now appear contemporary in style. A limited survey of the area immediately surrounding this building performed for the purposes of this project found several examples of newer construction and extensive remodels. While North Capitol Hill has strong physical boundaries and is a cohesive community, it has no recognized historic properties and appears unlikely to be eligible as a historic district.

**Description of Physical Appearance**

This is a two story residential property that has been converted to commercial offices. It retains Queen Anne-style massing, but no other stylistic elements remain. The house has a hipped roof of composition shingle, with a large rear addition under a shed roof, and a small side addition with a flat roof behind a simple parapet. The exterior is clad in wood clapboards. Although the address remains 10th Avenue E., the original entrance to the building has been removed and the side entrance on E. Miller Street is now the main access. The original front elevation is now treated as a side elevation. The first floor of this original front elevation, which faces east, is dominated by two large replacement plate glass windows with three operable sash below in aluminum frames. Between them is an aluminum-framed replacement window with a fixed single-light sash above and a smaller operable sash below. A matching window is above it on the second floor. On the northern corner of the second floor east elevation, a projecting rectangular bay under a hipped roof wraps around the corner. It has a large plate glass window in an aluminum frame with a pair of sliding sash below on the east side, and another plate glass window with a single-light sash below on the north side. The southeast corner of the second floor on the east elevation also has a projecting bay that wraps around the corner. This one is hexagonal under a pyramidal roof, with six single-light plate glass windows above a single-light sash, one in each section. On the south (E. Miller Street) elevation, the first floor has three 1/1 windows and one casement window, all with replacement sash, and a recessed entry. The second floor has a three-sided projecting bay in the center of the elevation with five replacement sash windows. Next to this is set of three windows, all with replacement sash. An interior chimney of red brick projects through the roof near the wall on this elevation. The rear elevation has a one story, full width addition with a steep shed roof and modern windows. This roof cuts off the bottom of a 1/1 original wood window on the rear wall of the original building. Next to this window is a red brick exterior chimney. To the north of the chimney is a row of four 1/1 wood windows. At the northwest corner is a projecting rectangular bay under a hipped roof with a large four-light window, but the bottom of the bay is engaged by the shed roof of the rear addition. The small addition to the north elevation is a separate commercial space clad in asbestos shingle. A second floor porch above it on the main building is also clad in asbestos shingle. This addition has a single
plate glass window and an 18-light door with a transom above. A half-round canvas awning with signage spans the width of the front façade. The addition is connected to the main building by the span of the upper wall forming a small passage between the two sections. This passage is closed with a wooden gate.

Property appears to meet criteria for the National Register of Historic Places: No
Property is located in a potential historic district (National and/or local): No
Property potentially contributes to a historic district (National and/or local): No

This commercial building from 1909 is located in the North Capitol Hill neighborhood, a few parcels south of SR 520. Available research did not reveal any associations with significant persons or events, and the building does not possess distinctive characteristics, nor does it possess the work of a master, nor possess high artistic value. It is a representative example of an early 20th century commercial strip, unremarkable in style or type. It retains good physical integrity, with the only apparent alteration being the possible changing of the storefront windows. Its setting has been impacted by the construction of SR 520 to the north. It does not appear to meet any of the criteria for NRHP eligibility. Therefore, it is not individually eligible for the NRHP.

The building is located in the North Capitol Hill neighborhood, bound by I-5, SR 520, Interlaken Park, and E. Howe Street. Greater Capitol Hill contains the Harvard-Belmont Historic District, Volunteer Park, and several properties individually listed in the NRHP, as well as several designated Seattle Landmarks. However, none of these properties are located in North Capitol Hill. The North Capitol Hill area is a mixture of historic buildings, mid-century buildings, and newer, contemporary buildings. Mainly residential, it also has several commercial buildings and institutional properties. There are also several older buildings that have been substantially remodeled and now appear contemporary in style. A limited survey of the area immediately surrounding this building performed for the purposes of this project found several examples of newer construction and extensive remodels. While North Capitol Hill has strong physical boundaries and is a cohesive community, it has no recognized historic properties and appears unlikely to be eligible as a historic district.

This is a one story commercial building from 1909 with three storefronts. It has a rectangular footprint, and is wood frame construction, clad in stucco. It has a flat roof behind a simple parapet. Other than a band of molding that runs above the storefront windows, the building has no architectural ornamentation. Both the center and northern storefronts have full-width canvas awnings with signage across the front façades. The body of the south and center storefronts are painted to appear as one building and share a recessed entry, while the northern storefront is painted differently and has a separate entry. The southern and center storefronts have two large nine-light windows that wrap the corner to form the recessed entry. The entry has two matching, single-leaf entry doors, each wood-framed with a large window. The northern storefront has a center, recessed entry flanked by two twelve-light windows that wrap the corner to form the entry. The entry door is wood-framed with a large window. These multi-light storefront windows may be replacements.

Property potentially contributes to a historic district (National and/or local):

Statement of Significance
This commercial building from 1921 is located in the North Capitol Hill neighborhood, one parcel south of SR 520. Available research did not reveal any associations with significant persons or events, and the building does not possess distinctive characteristics, does not represent the work of a master, nor possess high artistic value. It has experienced considerable alterations since its construction, including window replacements and the removal of the transoms, parapet, and pilaster. Its setting has been impacted by the construction of SR 520 to the north. Therefore, it is not individually eligible for the NRHP.

The building is located in the North Capitol Hill neighborhood, bound by I-5, SR 520, Interlaken Park, and E. Howe Street. Greater Capitol Hill contains the Harvard-Belmont Historic District, Volunteer Park, and several properties individually listed in the NRHP, as well as several designated Seattle Landmarks. However, none of these properties are located in North Capitol Hill. The North Capitol Hill area is a mixture of historic buildings, mid-century buildings, and newer, contemporary buildings. Mainly residential, it also has several commercial buildings and institutional properties. There are also several older buildings that have been substantially remodeled and now appear contemporary in style. A limited survey of the area immediately surrounding this building performed for the purposes of this project found several examples of newer construction and extensive remodels. While North Capitol Hill has strong physical boundaries and is a cohesive community, it has no recognized historic properties and appears unlikely to be eligible as a historic district.

Description of Physical Appearance
This is a one story, masonry, commercial building constructed in 1921. It has a rectangular footprint and a flat roof behind a simple parapet with cast stone coping. The exterior is clad in brick veneer, and is heavily covered in vines or ivy, obscuring most of the building. The building appears to have no architectural ornamentation. It has an asymmetrical façade, with a recessed entry near the south corner. The entry door is wooden, composed of vertical boards, with a small square window, and is topped by a transom. Next to the entry on the south side is long, vertical, single-light, wood-framed casement window with a built-in brick landscape bed below it. On the north side of the entry are four smaller single-light, wood-framed casement windows. To the north of these is another entry door that appears to be unused, judging by the amount of vegetation covering it. It is a wood paneled door with a window at the top, with a vertical casement window next to it. A plastic, interior-lit sign is mounted above the main entry door, perpendicular to the building. Historic photos show that this building originally had much larger storefront windows and multi-light transoms. The windows have been shortened and altered, while the transoms have been removed and bricked in. The original molded parapet at the top of the building has been removed, as has the original projecting pilaster that separated the two entries.

Architecture/Landscape Architecture

Property appears to meet criteria for the National Register of Historic Places: No

Property is located in a potential historic district (National and/or local): No

Property potentially contributes to a historic district (National and/or local):

Statement of Significance

This apartment building from 1957 is of a common and undistinguished architectural type, and has no known associations with important persons, patterns of development, methods of construction or historic events. It therefore does not appear to be eligible for the NRHP under any criteria. A separate rear building from 1905 has been heavily altered and no longer retains integrity of design, materials, workmanship, or feeling. Its setting has been impacted by the construction of the adjacent 1957 apartment building, as well as the construction of SR 520 immediately to the north. It retains only integrity of location and association. It does not retain sufficient integrity to convey its history and therefore is not eligible for the NRHP.

This property is located adjacent to the potential Roanoke Park historic district, but is outside the suggested boundaries, on the south side of SR 520. The age of the 1957 building is beyond the period of significance for that district (1900 to 1940), which would qualify it as an intrusion if it were included within the boundaries. These buildings are located in the North Capitol Hill neighborhood, bound by I-5, SR 520, Interlaken Park, and E. Howe Street. Greater Capitol Hill contains the Harvard-Belmont Historic District, Volunteer Park, and several properties individually listed in the NRHP, as well as several designated Seattle Landmarks. However, none of these properties are located in North Capitol Hill. The North Capitol Hill area is a mixture of historic buildings, mid-century buildings, and newer, contemporary buildings. Mainly residential, it also has several commercial buildings and institutional properties. There are also several older buildings that have been substantially remodeled and now appear contemporary in style. A limited survey of the area immediately surrounding this building performed for the purposes of this project found several examples of newer construction and extensive remodels. While North Capitol Hill has strong physical boundaries and is a cohesive community, it has no recognized historic properties and appears unlikely to be eligible as a historic district.

Description of Physical Appearance

This is a two story apartment building from 1957 with a rectangular footprint. It is clad in brick veneer and has a flat roof with projecting eaves. It has a center entry with a flat roof supported on two square posts and accessed by concrete steps. The façade is symmetrical, with two windows on the first and second floors. The windows are single light, plate glass flanked by 1/1 sash, and appear to be replacements. The span between the first and second floor windows is filled with an ornamental wood panel.

To the rear of the property is a separate building from 1905. However, it has been heavily altered and no longer retains any visual elements of the historic building. It has an L-shaped footprint and a flat roof with a front overhang. Most of the building is clad in T1-11 siding, although the north elevation of the extended "L" is stucco. Windows are fixed plate glass and oversized. There are two pedestrian entry doors, indicating that the building may house two units.

Property appears to meet criteria for the National Register of Historic Places: No

Property is located in a potential historic district (National and/or local): No

Property potentially contributes to a historic district (National and/or local):

This commercial building from 1932 is located in the North Capitol Hill neighborhood, a few parcels south of SR 520. Available research did not reveal any associations with significant persons or events, and the building does not possess distinctive characteristics, represent the work of a master, nor possess high artistic value. While it is a representative example of an early twentieth century commercial building, it has suffered some loss of integrity of materials from window and door replacements and from alterations to the cladding. It has had a rear addition, but it appears to date from the historic period. This building does not appear to meet any of the criteria for NRHP eligibility. Therefore, it is not individually eligible for the NRHP.

The building is located in the North Capitol Hill neighborhood, bound by I-5, SR 520, Interlaken Park, and E. Howe Street. Greater Capitol Hill contains the Harvard-Belmont Historic District, Volunteer Park, and several properties individually listed in the NRHP, as well as several designated Seattle Landmarks. However, none of these properties are located in North Capitol Hill. The North Capitol Hill area is a mixture of historic buildings, mid-century buildings, and newer, contemporary buildings. Mainly residential, it also has several commercial buildings and institutional properties. There are also several older buildings that have been substantially remodeled and now appear contemporary in style. A limited survey of the area immediately surrounding this building performed for the purposes of this project found several examples of newer construction and extensive remodels. While North Capitol Hill has strong physical boundaries and is a cohesive community, it has no recognized historic properties and appears unlikely to be eligible as a historic district.

Description of Physical Appearance

This is a one-story commercial building with a rectangular footprint sited on a corner. The building faces 10th Avenue E. It has a flat roof with a simple parapet, partially covered by a canvas awning. The exterior is mainly clad in brick veneer, most of which has been painted. The building houses two commercial units - most of the building is a restaurant, with the small unit on the north side occupied by a bike shop. The north unit has a projecting three-sided bay window with replacement plate glass windows and a bulkhead clad in non-original wood clapboards. The parapet area above the window is also clad in clapboards. Next to the bay window is a recessed single entry door of aluminum-framed glass with a fixed transom above. This section of the building is clad in unpainted brick veneer. South of the entry is a large display window composed of two large panes of plate glass and one smaller one in aluminum frames, with the bulkhead clad in wood clapboards. This window wraps the corner to form a recessed entry for the adjacent restaurant. This entry contains a pair of wooden doors with large windows below a transom window composed of three wood sash - a four-light sash above the doors, flanked by two, two-light sash. The doors have sidelights composed of plate glass set in wood frames with tapered openings at the top. An Art Deco style, milk-glass light fixture hangs from the ceiling above the doors. A wrought iron railing runs along the front of the recessed entry, indicating that these doors are no longer used. To the south of the entry are two large plate glass windows in wood frames with stucco bulkheads. A canvas awning with signage stretches across this west elevation, covering both sets of plate glass windows, and wraps the corner of the building. It continues down the south elevation, which faces E. Miller Street, and ends just past the side entry door. On the south elevation there is another pair of plate glass windows in wood frames with stucco bulkhead. Just past these windows is a recessed entry that contains a single leaf door of wood with a large window and a narrow sidelight, topped by a four-light wood transom. On this elevation the brick veneer of the building is painted. There are three small window openings on this elevation. Two of them contain four-light wood windows, but the one nearest to the entry has had the sash removed and contains two round vents. Beyond the third window is a small entry door. At the rear of the building, on the east elevation, is an addition. The parapet on this addition is slightly lower than the main building and is unpainted brick. Much of the wall on this section is wood clapboard, and a simple...
awning shields it below the parapet. It has a recessed entry with a single door and no windows remaining. It appears to have had large plate glass windows that have been covered with wood clapboards.

### NARRATIVE SECTION

**Date Of Construction:** 1962

**Architect:** Unknown

**Builder:** Unknown

**Engineer:** Unknown

**Property appears to meet criteria for the National Register of Historic Places:** No

**Property is located in a potential historic district (National and/or local):** No

**Property potentially contributes to a historic district (National and/or local):**

There are two separate buildings on this property, both constructed in 1962. One is a multi-unit apartment building on the north side of the property, and the other is a small commercial building on the far south side of the property.

This commercial building from 1962 is located in the North Capitol Hill neighborhood, a few parcels south of SR 520. Originally built as a barbershop, it is now a coffee shop. Available research did not reveal any associations with significant persons or events, and the building does not possess distinctive characteristics, does not represent the work of a master, nor possess high artistic value. While it is a representative example of a small commercial building with good integrity, it does not appear to meet any of the criteria for NRHP eligibility. Therefore, it is not individually eligible for the NRHP.

The building is located in the North Capitol Hill neighborhood, bound by I-5, SR 520, Interlaken Park, and E. Howe Street. Greater Capitol Hill contains the Harvard-Belmont Historic District, Volunteer Park, and several properties individually listed in the NRHP, as well as several designated Seattle Landmarks. However, none of these properties are located in North Capitol Hill. The North Capitol Hill area is a mixture of historic buildings, mid-century buildings, and newer, contemporary buildings. Mainly residential, it also has several commercial buildings and institutional properties. There are also several older buildings that have been substantially remodeled and now appear contemporary in style. A limited survey of the area immediately surrounding this building performed for the purposes of this project found several examples of newer construction and extensive remodels. While North Capitol Hill has strong physical boundaries and is a cohesive community, it has no recognized historic properties and appears unlikely to be eligible as a historic district.

**Description of Physical Appearance**

This is a small, one story commercial building from 1962 with an irregular footprint. The building appears rectangular from the street, but has a stepped rear elevation. The building has a flat roof with a simple parapet ornamented by a banded wood cornice. Most of the front elevation is shaded by a simple canvas awning with signage that obscures the cornice. The front elevation is dominated by four vertical plate glass windows in wood frames. Next to these windows is a single leaf entry door of wood with a large window. Below the windows, the bulkhead is clad in brick veneer, while the rest of the building is clad in rough stucco. The south elevation of the building is a party-wall with the building next door. The north elevation contains a large 1/1 window in the center.

Property appears to meet criteria for the National Register of Historic Places: No

Property is located in a potential historic district (National and/or local): No

Property potentially contributes to a historic district (National and/or local):

Statement of Significance
There are two separate buildings on this property, both constructed in 1962. One is a multi-unit apartment building on the north side of the property, and the other is a small commercial building on the far south side of the property.

This apartment building from 1962 is located in the North Capitol Hill neighborhood, a few parcels south of SR 520. Available research did not reveal any associations with significant persons or events, and the building does not possess distinctive characteristics, does not represent the work of a master, nor possess high artistic value. While it is a representative example of a 1960s era apartment complex and retains good integrity, it does not appear to meet any of the criteria for NRHP eligibility. Therefore, it is not individually eligible for the NRHP.

The building is located in the North Capitol Hill neighborhood, bound by I-5, SR 520, Interlaken Park, and E. Howe Street. Greater Capitol Hill contains the Harvard-Belmont Historic District, Volunteer Park, and several properties individually listed in the NRHP, as well as several designated Seattle Landmarks. However, none of these properties are located in North Capitol Hill. The North Capitol Hill area is a mixture of historic buildings, mid-century buildings, and newer, contemporary buildings. Mainly residential, it also has several commercial buildings and institutional properties. There are also several older buildings that have been substantially remodeled and now appear contemporary in style. A limited survey of the area immediately surrounding this building performed for the purposes of this project found several examples of newer construction and extensive remodels. While North Capitol Hill has strong physical boundaries and is a cohesive community, it has no recognized historic properties and appears unlikely to be eligible as a historic district.

Description of Physical Appearance
This is a two story apartment building from 1962 with an L-shaped footprint. It contains four units and is now used primarily for commercial tenants. It has a flat roof with a simple parapet and metal coping. The exterior is clad in a combination of rough stucco and brick veneer. Windows are mostly single-light fixed with sliding sash in aluminum frames. A few of the windows have been replaced with modern sliding sash. The front entry is accessed by a concrete porch with metal handrail, and the entry door is wooden with a large window. A narrow sidelight is adjacent to it. The entry is covered by a half-round canvas awning. The building forms an "L" around a courtyard on the south side, accessed by concrete steps with a metal handrail. The entries to the other units appear to be on this side, under a flat-roofed porch supported on metal posts. A paved driveway runs along the north side of the building, leading to a paved parking lot in the rear.

Property appears to meet criteria for the National Register of Historic Places: No
Property is located in a potential historic district (National and/or local): No
Property potentially contributes to a historic district (National and/or local):

Statement of Significance
This residence from 1910 is located adjacent to the potential Roanoke Park historic district, but is outside the suggested boundaries, separated from it by SR 520. Available research did not reveal any associations with significant persons or events, and the house does not represent the work of a master, nor possess high artistic value. It has suffered loss of integrity from window replacements, including removal of some openings completely and alteration of the size of others, and from porch alterations. It has also has a rear addition, and had T1-11 added to the basement level. Its setting has been impacted by the construction of SR520 immediately to the north, causing the removal of the adjacent residential houses to the north. It does not appear to meet any of the criteria for NRHP eligibility, and has suffered a significant loss of integrity. Therefore, it is not individually eligible for the NRHP.

The house is located in the North Capitol Hill neighborhood, bound by I-5, SR520, Interlaken Park, and E. Howe Street. Greater Capitol Hill contains the Harvard-Belmont Historic District, Volunteer Park, and several properties individually listed in the NRHP, as well as several designated Seattle Landmarks. However, none of these properties are located in North Capitol Hill. The North Capitol Hill area is a mixture of historic buildings, mid-century buildings, and newer, contemporary buildings, and was heavily impacted by the construction of I-5 and SR 520. Mainly residential, it also has several commercial buildings and institutional properties. There are also several older buildings that have been substantially remodeled and now appear contemporary in style. A limited survey of the area immediately surrounding this building performed for the purposes of this project found several examples of newer construction and extensive remodels. While North Capitol Hill has strong physical boundaries and is a cohesive community, it has no recognized historic properties and appears unlikely to be eligible as a historic district.

Description of Physical Appearance
This is an Arts and Crafts/Craftsman style bungalow built in 1910. The house is almost entirely obscured by a decorative brick wall at street level behind which is heavy vegetation. The only part of the house that is visible from the public right of way is the hipped roof of composition shingles and a hipped dormer on the front. The dormer has a multi-light, wood-frame window. The house has a rectangular footprint with a small rear addition. The exterior of the house is clad in wood shingle, with T1-11 on the basement level. Most windows in the house have been replaced with either 1/1 sash or single-light casements with transoms. Other than the dormer, only one original window is visible - a multi-light casement window on the west elevation. The façade has an off-center, partial-width front porch supported on four Tuscan columns with wood picket railings. The porch has been altered, and the corners of the porch are now clipped, with the entry on the diagonal northwest end. The entry door is wood with a single-light window. The center of the façade has no openings, which also indicates an alteration. There is one window on the façade at the far west end, and this opening has been altered in size to accommodate a smaller replacement window.

Engineer: Unknown

Property appears to meet criteria for the National Register of Historic Places: No
Property is located in a potential historic district (National and/or local): No
Property potentially contributes to a historic district (National and/or local):

Statement of Significance
The 10th Avenue E. overpass over SR 520 is a common transportation component and is not architecturally significant. It does not embody distinctive characteristics, is not the work of a master, and does not possess high artistic value. Available research did not reveal any associations with significant persons or events. The overpass basically replaced the part of 10th Avenue E. that was removed by SR 520 construction. The overpass does not meet any of the criteria necessary to qualify for the NRHP. The overpass does retain good integrity, with few changes outside of routine maintenance typical of an active transportation component. The overpass is not within the recommended boundaries of the adjacent Roanoke Park eligible historic district, and does not fall within the period of significance (1900-1940) for that district.

Description of Physical Appearance
The 10th Avenue E. overpass over SR 520 was constructed in 1962, and is located between milepost 0 and milepost 1, at approximately milepost 0.1. The overpass carries three lanes of traffic, two north bound and one south bound, with a raised pedestrian sidewalk along each side. The south bound lane is also a designated bicycle lane. The overpass is constructed of reinforced concrete with painted metal railing along both the east and west sides. This railing is simple in design, with round top and bottom rails and smaller round vertical balusters between, with steel stanchions between sections. These stanchions have rounded tops and recessed sides, and are pierced with a round hole at the top and the bottom to carry the railing. The railing sits on top of a solid concrete wall. The incised date "1962" is molded in concrete at the northwest and southeast ends of the concrete wall. Other than general maintenance and road work, there does not appear to have been any significant alteration to the overpass.

Other (specify): Intact
There are two buildings on this property, both built in 1965 - a firehouse and a Freeway Control Office building.

Constructed in 1965, the firehouse replaced a historic fire station (ca. 1916) that was located at 11th Ave. N and E Howe St. after the construction of SR 520. It will be eligible for the NRHP under Criterion A for its association with the development of the Seattle Fire Department, and under Criterion C for its distinctive Modern architectural style, once it reaches fifty years old in 2015. It retains very good integrity.

From the City of Seattle Department of Neighborhoods historical site summary, "...this modern fire station serves the North Capitol Hill and Eastlake neighborhoods. It replaced the original Fire Station No. 22, which was located some five blocks to the south on the northwest corner of the intersection of East Howe Street and 11th Avenue East. Completed in 1909, this two-story wood frame building featured a Craftsman style design and a small hose tower. Located across the street diagonally from the northwest corner of Lake View Cemetery, the new building housed Capitol Hill’s second fire station. …By the later 1940s, many of the department’s older wood frame fire stations were very much in need of replacement. Until 1949, the combination of financial difficulties due to the economic depression of the 1930s and shortages of labor and materials brought on by the Second World War had halted construction of any new fire stations for a fifteen-year period. In 1948, the Fire Department made plans to build a new Fire Station No. 22 on the grounds of nearby Roanoke Park. A local Soroptimist Club, a professional women’s organization, organized opposition to this plan and prevented construction of the new fire station on any portion of the park. In 1964, the Fire Department was able to build its new Fire Station No. 22 across the street from the park on surplus land owned by the state, which had been condemned for the construction of State Route 520. Architect LaMonte Shorett was selected to prepare the design for the modern one-story brick fire station. This building is significant for its design and for its associations with the development of the Seattle Fire Department and the North Capitol Hill neighborhood."

This station is slated for replacement in 2010 as part of the City of Seattle’s Fire Facilities and Emergency Response Levy Program. It houses one engine company (E22) and the Fire Department’s Incident Command Unit. According to the Fire Facilities and Emergency Response Levy Program analysis, Station 22’s building systems are nearing their 50-year mark and are outdated, and the building is out of regulatory compliance in many areas. Also, the station is too small to accommodate modern apparatus and staffing levels.

The Freeway Control Office building was also built in 1965, after the construction of SR 520, but it is not eligible for the NRHP. It does not embody distinctive characteristics, is not the work of a master, and does not possess high artistic value. Available research did not reveal any associations with significant persons or events. Although it has good integrity, it does not meet any of the criteria necessary to qualify for listing in the NRHP.

The fire station and Freeway Control Office building are located adjacent to the potential Roanoke Park historic district, but are outside the suggested boundaries, and their age is beyond the period of significance for that district (1900 to 1940). The area where these buildings are located is a narrow strip of land between E. Roanoke Street and SR 520. They are the only two buildings on the site, both from 1965. Therefore, there is no potential for a historic district here.
Historic Property
Inventory Report for

at 901 E Roanoke St, Seattle, WA 98102

Description of Physical Appearance

This property contains a Modern-style one story fire station from 1965, clad in blond brick veneer. It has a rectangular footprint and a flat roof with a simple parapet. Its most prominent feature is the tall square tower that projects above the roofline from the rear of the building. The front façade is dominated by the garage bay, which is taller than the surrounding building and has a wide roll-up garage door with two rows of fixed windows. It also has a more pronounced parapet detail than the rest of the building. Most of the windows on the building are fixed plate glass with two awning windows below. The entry is to the east of the garage door, and is slightly recessed. The building has minimal ornamentation, limited to some brick detailing, and metal edging along the parapet and at building corners.

To the east of the fire station is the two story Freeway Control Office building, also built in 1965. This building has an irregularly shaped footprint whose shape follows the curve of the SR 520 ramp by consecutive steps around the southwest corner of the building. It is clad in brown brick veneer on the first floor and vertical metal panels on the second floor, and has a flat roof with a simple parapet. The building is composed of two masses - the east section contains parking on the first floor, with the second floor sitting above supported on square concrete posts. A brick wall wraps around the first floor forming a partial screen, and curves up where it meets the underside of the second floor. Windows in this section are vertical single light and tinted, with a square awning sash at the bottom. The west section of the building is lower than the east section, and steps out slightly on the front (north) elevation. The entry is recessed and consists of a commercial-style glass door in an anodized aluminum frame with a fixed transom above. To the east of the door is a two-light aluminum framed window with sliding sash, set into a smooth stucco panel. Next to this is a brick pilaster, and on the other side of the pilaster are two larger metal framed, fixed, two-light windows with smooth stucco below. Above these two windows on the second floor are two large plate glass windows, each with two smaller sash at the bottom. There is a smooth stucco band above and below these plate glass windows. On the west elevation, the second floor projects out over the first floor and displays narrow vertical plate glass windows, slightly inset with smooth stucco panels above and below. The southwest corner of the building steps back in five consecutive sections, following the curve of the SR 520 exit ramp. This rear stepped section, as well as the east section of the building, appears to be a later addition.

Property is located in a potential historic district (National and/or local): No

Property potentially contributes to a historic district (National and/or local):

Statement of Significance

This residence from 1907 is located adjacent to the potential Roanoke Park historic district, but is outside the suggested boundaries, separated from it by SR 520. Available research did not reveal any associations with significant persons or events, and the house does not represent the work of a master, nor possess high artistic value. It is a representative example of residential Arts and Crafts style architecture. Its setting has been impacted by the construction of SR520 immediately to the north. However, it retains good physical integrity. Despite the impact to the setting, this property is eligible for the NRHP under Criterion C for its distinctive architectural characteristics, representative of its Arts and Crafts/Craftsman style.

The house is located in the North Capitol Hill neighborhood, bound by I-5, SR520, Interlaken Park, and E. Howe Street. Greater Capitol Hill contains the Harvard-Belmont Historic District, Volunteer Park, and several properties individually listed in the NRHP, as well as several designated Seattle Landmarks. However, none of these properties are located in North Capitol Hill. The North Capitol Hill area is a mixture of historic buildings, mid-century buildings, and newer, contemporary buildings. Mainly residential, it also has several commercial buildings and institutional properties. There are also several older buildings that have been substantially remodeled and now appear contemporary in style. A limited survey of the area immediately surrounding this building performed for the purposes of this project found several examples of newer construction and extensive remodels. While North Capitol Hill has strong physical boundaries and is a cohesive community, it has no recognized historic properties and appears unlikely to be eligible as a historic district.

Description of Physical Appearance

This 1 ½ story Craftsman bungalow has a rectangular footprint and a front gable roof. The roof is composition shingle with deep open eaves. The house is clad in wood shingle with wood clapboard along the bottom section of the wall. The partial width front porch is centered and has a front gable roof with decorative beams in the open gable end supported on two square columns and a multi-light entry door. There are shed dormers that do not appear to be original on both sides of the house. The north elevation has an exterior brick chimney and a projecting, boxed bay window. Windows are mostly 4/1 double-hung. The front gable end has a pair of 3/1 double-hung windows. The change of siding along the bottom of the house, a change in brick at the bottom half of the chimney, and selected detailing of the front porch indicate the house may have been raised or relocated, which is possible given its location immediately adjacent to SR 520.

Statement of Significance

This duplex from 1910 is located adjacent to the potential Roanoke Park historic district, but is outside the suggested boundaries, separated from it by SR520. Available research did not reveal any associations with significant persons or events, and the house does not represent the work of a master, nor possess high artistic value. While it is a representative example of residential Tudor Revival style architecture, it has suffered some loss of design integrity from window replacements. Its setting has been impacted by the construction of SR520 immediately to the north and new school construction and parking across the street to the east. Therefore, it is not individually eligible for the NRHP.

The house is located in the North Capitol Hill neighborhood, bound by I-5, SR520, Interlaken Park, and E. Howe Street. Greater Capitol Hill contains the Harvard-Belmont Historic District, Volunteer Park, and several properties individually listed in the NRHP, as well as several designated Seattle Landmarks. However, none of these properties are located in North Capitol Hill. The North Capitol Hill area is a mixture of historic buildings, mid-century buildings, and newer, contemporary buildings. Mainly residential, it also has several commercial buildings and institutional properties. There are also several older buildings that have been substantially remodeled and now appear contemporary in style. A limited survey of the area immediately surrounding this building performed for the purposes of this project found several examples of newer construction and extensive remodels. While North Capitol Hill has strong physical boundaries and is a cohesive community, it has no recognized historic properties and appears unlikely to be eligible as a historic district.

Description of Physical Appearance

This two story building is a Tudor Revival style residence built in 1910. It has a T-shaped footprint. The roof over the main part of the house is composed of two parallel front gables with stucco and half-timbering in the gable ends. The front section of the house that forms the “T” shape is stepped down and projects out under another gable, in the middle of the other two. All three have deep eaves supported by knee braces. A central brick chimney sits on the north slope of the southern-most gable, and there is also an exterior brick chimney on the north side elevation of the building. The house is clad mainly in square-cut wood shingles, but some sections have narrow wood siding, and the front wall of the center gable is also partly covered in stucco and half-timbering. This section projects out slightly to overhang the first floor. All seven windows in this section have been replaced with either single light plate glass, or plate glass with an awning window at the bottom. The two gables to the rear have paired, double hung, 9/1 windows. The first floor has floor to ceiling fixed windows, some with operable awning windows at the bottom. Below is a partially below-grade double garage of concrete with two single-car openings. The one on the north has a pair of swinging doors with two windows in each door, while the one on the south has a modern roll-up garage door with no openings. No entry to the house is visible from the street.

Property is located in a potential historic district (National and/or local): No

Property potentially contributes to a historic district (National and/or local):

Statement of Significance

The Delmar Drive E. overpass over SR 520 is a common transportation component and is not architecturally significant. It does not embody distinctive characteristics, is not the work of a master, and does not possess high artistic value. Available research did not reveal any associations with significant persons or events. The overpass basically replaced the part of Delmar Drive E. that was removed by SR 520 construction. The overpass does not meet any of the criteria necessary to qualify for the NRHP. The overpass does retain good integrity, with few changes outside of routine maintenance typical of an active transportation component, with the exception of the addition of chain link fencing at the edges. The overpass is not within the recommended boundaries of the adjacent Roanoke Park eligible historic district, and does not fall within the period of significance (1900-1940) for that district.

Description of Physical Appearance

The Delmar Drive E. overpass over SR 520 was constructed in 1962, and is located between milepost 0 and milepost 1, at approximately milepost 0.2. The overpass carries two lanes of traffic, one north bound and one south bound, with a raised pedestrian sidewalk along each side. It is constructed of reinforced concrete with painted metal railing along both the east and west sides. This railing is simple in design, with round top and bottom rails and smaller round vertical balusters between, with steel stanchions between sections. These stanchions have rounded tops and recessed sides, and are pierced with a round hole at the top and the bottom to carry the railing. The railing sits on top of a solid concrete wall. The incised date “1962” is molded in concrete at the northwest and southeast ends of the concrete wall. Chain link fencing has been added to the ends of the railing. Other than general maintenance and road work, this chain link fencing appears to be the only alteration to the overpass.

**Narrative Section**

The Bagley Viewpoint is an undistinguished recreation and viewpoint area, and is not architecturally significant. It does not embody distinctive characteristics, is not the work of a master, and does not possess high artistic value. Although it was named to commemorate Dr. Herman Bagley, available research did not reveal any specific associations with him, or with any other significant persons or events. The existing viewpoint is all that remains of the original section of park, and this viewpoint was rebuilt in 1971 after the construction of SR 520. Originally, this was part of Interlaken Park, which dates from 1908 and was basically an enclosure of the 1896 bicycle path that came out at the top of the Roanoke Street bluff. “The northern ‘entrance’ to Interlaken Park was at 11th and Roanoke…” (Sherwood). When streets were introduced to the area, Delmar Avenue crossed through Interlaken Park and went to 11th Avenue. “[T]he park area continued northwesterly as a triangle between 11th Avenue, Federal Avenue and Roanoke” (Sherwood). Little more than clearing appears to have been done in this area until 1916. In 1916 the widow of Dr. Herman Beardsley Bagley, Mrs. M. W. Glenn, presented an ornamental drinking fountain with lights in memory of Dr. Bagley, one of Washington’s first homeopathic physicians and surgeons. Dr. Bagley was born in New York in 1845 and studied medicine under his physician-father, who he eventually followed to Seattle. He was elected president of the King County and Washington Homeopathic Societies, served as the King County Health Officer, and was elected to the State Board of Medical Examiners. He was also president of the Seattle Improvement Company (Bagley Avenue was named for him) and was a director of the Washington National Bank. Dr. Bagley was elected Councilman in 1879. The Bagley Memorial Fountain (aka “Bagley Light”) was placed at the west entrance of Interlaken Park. By 1932 increased traffic necessitated Delmar Avenue be extended from 11th Avenue to Roanoke, causing a redesign of the Bagley Fountain area. “Soon there were complaints that the Fountain was ‘neglected and forgotten,’ for which the Department claimed extreme vandalism and that the Fountain ‘of cast iron construction’ is easily susceptible to rusting and corroding” (Sherwood). The Bagley Fountain was removed around 1952. The memorial plaque honoring Dr. Bagley was not returned until 1970 when the viewpoint was redeveloped following the construction of SR 520 in 1963. The original planned alignment of SR 520 would have completely eliminated the viewpoint. The construction and current configuration for SR 520 effectively cut the viewpoint off and separated it from Interlaken Park, leaving the viewpoint as a small, stand alone area.

Bagley Viewpoint has suffered from changes to its footprint and design, and was essentially rebuilt in 1970, impacting its integrity of design, workmanship, materials, setting, and feeling. It retains only integrity of location and association. The Bagley Viewpoint does not retain enough integrity to convey its history, therefore it is not eligible for the NRHP.

Bagley Viewpoint is adjacent to the Roanoke Park eligible historic district but is outside the recommended boundaries, separated from it by E. Roanoke Street and Delmar Drive East.

**Description of Physical Appearance**

Bagley Viewpoint is a small park area with an irregularly shaped plan located where Delmar Drive meets E. Roanoke Street. It consists of a paved parking area for approximately 12 vehicles, a small grassy area with various landscape plantings, a bench set on cobblestone paving facing the view to the east, and a large boulder with two memorial plaques on it. A substantial metal railing on a concrete chain wall which matches that on the Delmar Drive overpass surrounds the park on the southeast side. The east/northeast side is bordered by a chain link fence, as this is an area with a steep drop. A tall hedge growing in front of the fence along the east edge of the park obscures the view from the bench. A sidewalk that goes behind the bench accesses the Roanoke steps to the north of the park. The original memorial plaque for the park reads, “In memory of Herman Beardsley Bagley the first homeopathic physician and surgeon in the state of Washington Also one of the four originators of the Lake Washington and Lake Union canal.” A newer plaque has been placed on the boulder above this one and reads, “In honor of Dr. Bruce Milliman and Dr. Esteban Ryciak for their dedication and commitment to the advancement of naturopathic medicine.”

NARRATIVE SECTION

The Roanoke stairway was constructed in 1908, probably as part of the original Interlaken Park, which included the area around the Bagley Viewpoint until it was cut off from the park by the construction of SR 520 in the mid-1960s. Seattle has more than 500 public stairways due to its hilly terrain. Some are well known and well-documented, while others have little information available. For example, all of the stairways in the Queen Anne Hill neighborhood have been documented, researched, and mapped. Several stairways are popular with runners and urban hikers and are frequently incorporated into running and training route maps. The East Republican Street Stairway, between Melrose Avenue East and Bellevue Avenue East, is a Seattle landmark, designated in September of 1980. It was noted as "one of the finer and more gracious examples of its type..." (Snyder 1979). "In this instance equal emphasis seems to have been directed to the aesthetic aspects of the design..." (Snyder 1979). It was also noted for creating an important open space amenity for the neighborhood in addition to providing functional pedestrian circulation. "Landscape elements within the right-of-way are essential to the character of the site....These elements are extremely effective in contributing to the quality of the surrounding high-density residential environment" (Snyder 1979).

While its physical integrity appears good, the setting and context of the Roanoke Stairway were greatly altered by the construction of SR 520, which separated it from Interlaken Park and altered the setting so that it now runs along the edge of SR 520. Unlike some of Seattle's historic stairways, such as East Republican Street noted above, this one does not possess distinctive characteristics or formal design elements, and no emphasis was placed on aesthetics of the design. It is a simple utilitarian form that does not represent the work of a master, nor possess high artistic value. It does not incorporate landscape elements or provide an open space amenity or viewpoint. Available research did not reveal any associations with significant persons or events. While it is a representative example of a Seattle public stairway, its setting has been impacted by the construction of SR 520 immediately adjacent to it. It does not appear to meet any of the criteria for NRHP eligibility. Therefore, it is not individually eligible for the NRHP.

The stairway is located outside of the recommended boundaries of the potential Roanoke Park eligible historic district, and therefore is not eligible for the NRHP as a contributing element to that district.

Description of Physical Appearance

This is a cast in place, reinforced concrete stairway from 1908 that runs from 11th Avenue E. to 12th Avenue E. down a steep incline. The top of the stair can be accessed from the Bagley Viewpoint or from the end of Roanoke Street. It is composed of 85 steps, and is approximately six feet wide and 216 feet long. It has no distinguishing characteristics or architectural ornamentation. It is composed of cast concrete steps with multiple landings, and winds slightly to the north as it progresses downward. A metal pipe handrail sitting on a low concrete wall runs along each side of the stairway. Heavy vegetation surrounds the stairway for most of its length.

**Engineer:** Unknown

**Property appears to meet criteria for the National Register of Historic Places:** No

**Property is located in a potential historic district (National and/or local):** No

**Property potentially contributes to a historic district (National and/or local):**

- This Ranch-style residence from 1965 is a common architectural style and is not stylistically distinguished. Available research did not reveal any associations with significant persons or events, and the house does not represent the work of a master, nor possess high artistic value. While it does retain good integrity, it does not appear to meet any of the criteria necessary to qualify for the NRHP.

- This house is located adjacent to the potential Roanoke Park historic district, but is outside the suggested boundaries, and its age is beyond the period of significance for that district (1900 to 1940), which would qualify it as an intrusion if it were included within the boundaries. The area where this house is located contains much new construction, and few of those extant houses that date from before 1971 are architecturally distinguished. This house and its immediately neighboring structures do not convey the historic significance of the community. Therefore, there is no potential for a historic district here.

**Description of Physical Appearance**

This is a two-story, Ranch style, single family dwelling with a rectangular footprint. It has a partial basement. The foundation is poured concrete. The ground floor is clad with vertical board and batten, while the second floor is horizontal clapboards. The house has a low pitched, side gabled roof with composition shingles and deep boxed eaves. Visible rafter tails extend to the end of the eaves. The second floor is cantilevered out to shield a three-car carport, and supported on round metal poles. Windows are metal sliding sash and fixed plate glass.

NARRATIVE SECTION

Date Of Construction: 1940
Architect: John T. Jacobsen
Builder: Unknown
Engineer: Unknown

Property appears to meet criteria for the National Register of Historic Places: Yes
Property is located in a potential historic district (National and/or local): No
Property potentially contributes to a historic district (National and/or local):

This Ranch-style residence from 1940 was designed by noted architect John T. Jacobsen (1903 – 1998). A native of Seattle, Jacobsen received his architectural degree from the University of Washington and Master's degree from the University of Pennsylvania. His work has been credited with helping to form the basis for Pacific Northwest Modernism. He was published in Progressive Architecture’s “Pencil Points” and in Pacific Architect & Builder. His best known projects include his own Madison Park home (ca. 1936), the George Horton House (1946), Helen Bush School's Miller Hall (c.1948), University of Washington's Gerberding Hall (1949), the Goslin House (1939), and the Andrew Gunby House —all located in Seattle. During the Depression, Jacobsen worked as the principal designer on the Yesler Terrace Housing Project (1939-1941). After relocating to Hawaii, Jacobson worked on various projects and opened his own firm. There he designed the Sea Life Park and research facilities, the Winnie Units at Punahou School, and aviator Charles Lindbergh's home (1971), and was very involved in early NRHP designations and historic preservation efforts. The Andrew Gunby House is eligible for the NRHP under Criterion C for distinctive characteristics unique to its period and as the work of a master architect.

This house is located adjacent to the potential Roanoke Park historic district, but is outside the suggested boundaries. The area where this house is located contains much new construction, and few of those extant houses that date from before 1971 are architecturally distinguished. This house and its immediately neighboring structures do not convey the historic significance of the community. Therefore, there is no potential for a historic district here.

This is a two story, single family residence with a rectangular footprint. It has a split level plan with a side gable roof over the western section of the house, and a front gable roof over the eastern section. The roof is composition shingles with open eaves and exposed rafter tails. The house is clad in vertical board and batten siding. The western end of the house has an open carport on the ground floor, and has an exterior stair on the west elevation to access the second story living space. On the eastern end of the house, the living space is two stories, and the second story projects out slightly above the first story on the south and east elevations. The ground floor entry is located on the south elevation adjacent to the carport and is slightly recessed. Next to the entry is an exterior brick chimney. The ground floor features two large plate glass windows divided into 6 lights. Many of the remaining windows are modern vinyl replacements, and are single light casements or fixed single light with a sliding sash.

Architect: Builder:  
Landscape Engineer:  

Property appears to meet criteria for the National Register of Historic Places: No  
Property is located in a potential historic district (National and/or local): No  
Property potentially contributes to a historic district (National and/or local): No  

Statement of Significance: The property was evaluated at a reconnaissance level in a cultural resources survey completed for the SR520 I-5 to Medina: Bridge Replacement and HOV Project in the City of Seattle, King County, Washington. It was constructed in 1913 in the eastern portion of the Wallingford neighborhood, and now stands immediately west of I-5. The residence has fair integrity, due to window replacements and changes to its exterior wall cladding. Its setting has also been impacted by the construction of I-5 to the east. The residence is a modest example of Craftsman style architecture. It is not located in a cohesive neighborhood and does not appear to embody characteristics or a method of construction that would warrant special recognition. Based on our evaluation, the property appears ineligible for listing in the NRHP individually or as a contributing element to a historic district.

Description of Physical Appearance: The property contains a two-story single-family residence with an irregular plan and platform frame wood construction. The residence was originally designed with elements of the Craftsman style. It has a medium pitched side-gable roof with composition asphalt shingles, exposed rafter tails, overhanging eaves, and a gable roof dormer. The exterior walls are clad with wood clapboard siding. The primary facade is asymmetrically divided and two bays wide. The window fenestration is composed of both non-original and original wood windows.

### Statement of Significance:

The property was evaluated at a reconnaissance level in a cultural resources survey completed for the SR520 I-5 to Medina: Bridge Replacement and HOV Project in the City of Seattle, King County, Washington. It was constructed in 1912 in the eastern portion of the Wallingford neighborhood, and now stands immediately west of I-5. The residence has poor integrity, due to the installation of vinyl siding on the exterior walls, river rock veneer skirting on the porch, and replacement of its original windows. Because of these alterations, the residence no longer has the ability to convey historical significance. Its setting has also been impacted by the construction of I-5 to the eas. It is not located in a cohesive neighborhood and does not appear to embody characteristics or a method of construction that would warrant special recognition. Based on our evaluation, the property appears ineligible for listing in the NRHP individually or as a contributing element to a historic district.

### Description of Physical Appearance:

The property contains a one and a half-story single-family residence with a rectangular plan and platform frame wood construction. The residence was originally designed with elements of the Craftsman style. The primary façade is asymmetrically divided and two bays wide. It has a medium pitch front-gable roof with composition asphalt shingles and exposed structural elements. The exterior walls are clad with non-original vinyl siding. The front porch is clad in river rock. The fenestration consists of non-original windows throughout the residence.

**Property appears to meet criteria for the National Register of Historic Places:** No

**Property is located in a potential historic district (National and/or local):** No

**Property potentially contributes to a historic district (National and/or local):** No

**Statement of Significance:**

The property was evaluated at a reconnaissance level in a cultural resources survey completed for the SR520 I-5 to Medina: Bridge Replacement and HOV Project in the City of Seattle, King County, Washington. It was constructed in 1914 in the eastern portion of the Wallingford neighborhood, and now stands immediately west of I-5. The residence has poor integrity, due to the installation of non-original aluminum siding on the exterior walls and the removal and replacement of original windows. Because of these alterations, the residence no longer has the ability to convey historical significance. Its setting has also been impacted by the construction of I-5 to the west and SR 520 to the north. It is not located in a cohesive neighborhood and does not appear to embody characteristics or a method of construction that would warrant special recognition. Based on our evaluation, the property appears ineligible for listing in the NRHP individually or as a contributing element to a historic district.

**Description of Physical Appearance:**

The property contains a one and a half-story single-family residence with a rectangular plan and platform frame wood construction. The residence was originally designed in the Craftsman style. The primary façade is symmetrically divided and three bays wide. It has a medium pitch cross-gable roof with composition asphalt shingles and exposed structural elements. The exterior walls are clad with non-original aluminum siding. The fenestration consists of non-original windows throughout the residence.

Property appears to meet criteria for the National Register of Historic Places: No

Property is located in a potential historic district (National and/or local): No

Property potentially contributes to a historic district (National and/or local): No

Statement of Significance: The property was evaluated at a reconnaissance level in a cultural resources survey completed for the SR520 I-5 to Medina: Bridge Replacement and HOV Project in the City of Seattle, King County, Washington. It was constructed in 1913 in the eastern portion of the Wallingford neighborhood, and now stands immediately west of I-5. The residence has fair integrity, due to many window replacements, and is a modest example of the Craftsman style. Its setting has also been impacted by the construction of I-5 to the east. It is not located in a cohesive neighborhood and does not appear to embody characteristics or a method of construction that would warrant special recognition. Based on our evaluation, the property appears ineligible for listing in the NRHP individually or as a contributing element to a historic district.

Description of Physical Appearance: The property contains a one and a half-story single-family residence with a rectangular plan and platform frame wood construction. The residence was originally designed in the Craftsman style. The primary facade is symmetrically divided and three bays wide. It has a medium pitch side-gable roof with composition asphalt shingles and a hip roof dormer. The exterior walls are clad with wood clapboard siding. The fenestration consists of a combination of original wood windows and non-original vinyl and metal sliding windows.

**Property appears to meet criteria for the National Register of Historic Places:** No

**Property is located in a potential historic district (National and/or local):** No

**Property potentially contributes to a historic district (National and/or local):** No

**Statement of Significance:**
The property was evaluated at a reconnaissance level in a cultural resources survey completed for the SR520 I-5 to Medina: Bridge Replacement and HOV Project in the City of Seattle, King County, Washington. It was constructed in 1914 in the eastern portion of the Wallingford neighborhood, and now stands immediately west of I-5. The residence has poor integrity, due to the installation of vinyl replacement windows and vinyl siding. Because of these alterations, it no longer has the ability to convey historical significance. Its setting has also been impacted by the construction of I-5 to the east. The residence is not located in a cohesive neighborhood and does not appear to embody characteristics or a method of construction that would warrant special recognition. Based on our evaluation, the property appears ineligible for listing in the NRHP individually or as a contributing element to a historic district.

**Description of Physical Appearance:**
The property contains a one and a half-story single-family residence with a rectangular plan and platform frame wood construction. The residence was originally designed in the Craftsman style. The primary façade is symmetrically divided and three bays wide. It has a medium pitch side-gable roof with composition asphalt shingles and a pop-up shed roof dormer. The exterior walls are clad with non-original vinyl siding. The fenestration consists of non-original vinyl windows throughout the residence.

Property appears to meet criteria for the National Register of Historic Places: No
Property is located in a potential historic district (National and/or local): No
Property potentially contributes to a historic district (National and/or local): No

Statement of Significance: The property was evaluated at a reconnaissance level in a cultural resources survey completed for the SR520 I-5 to Medina: Bridge Replacement and HOV Project in the City of Seattle, King County, Washington. It was constructed in 1922 in the eastern portion of the Wallingford neighborhood, and now stands immediately west of I-5. The residence has poor integrity, because the original windows were replaced with vinyl windows and vinyl siding installed on the exterior walls. Because of these alterations, it no longer has the ability to convey historical significance. Its setting has also been impacted by the construction of I-5 to the east. The residence is not located in a cohesive neighborhood and does not appear to embody characteristics or a method of construction that would warrant special recognition. Based on our evaluation, the property appears ineligible for listing in the NRHP individually or as a contributing element to a historic district.

Description of Physical Appearance: The property contains a one and a half-story single-family residence with a rectangular plan and platform frame wood construction. The residence was originally designed with elements of the Colonial Revival style. The primary façade is asymmetrically divided and three bays wide. It has a medium pitch side-gable roof with composition asphalt shingles, overhanging eaves, and a large shed roof dormer. The exterior walls are clad with non-original vinyl siding. The fenestration consists of non-original vinyl windows throughout the residence. A garage stands behind the residence.

Property appears to meet criteria for the National Register of Historic Places: No

Property is located in a potential historic district (National and/or local): No

Property potentially contributes to a historic district (National and/or local): No

Statement of Significance:
The property was evaluated at a reconnaissance level in a cultural resources survey completed for the SR520 I-5 to Medina: Bridge Replacement and HOV Project in the City of Seattle, King County, Washington. It was constructed in 1920 in the eastern portion of the Wallingford neighborhood, and now stands immediately west of I-5. The residence has poor integrity, due to the installation of vinyl siding and the removal and replacement of its windows. Because of these alterations, the residence no longer has the ability to convey historical significance. Its setting has also been impacted by the construction of I-5 across the street to the east of this residence. It is not located in a cohesive neighborhood and does not appear to embody characteristics or a method of construction that would warrant special recognition. Based on our evaluation, the property appears ineligible for listing in the NRHP individually or as a contributing element to a historic district.

Description of Physical Appearance:
The property contains a one and a half-story single-family residence with a rectangular plan and platform frame wood construction. The residence was originally designed with elements of the Craftsman and Colonial Revival styles. The primary façade is asymmetrically divided and two bays wide. It has a medium pitch front-gable roof with composition asphalt shingles and boxed eaves. The exterior walls are clad with non-original vinyl siding. The fenestration consists of non-original vinyl windows throughout the residence.

Property appears to meet criteria for the National Register of Historic Places: No
Property is located in a potential historic district (National and/or local): No
Property potentially contributes to a historic district (National and/or local): No

Statement of Significance: The property was evaluated at a reconnaissance level in a cultural resources survey completed for the SR520 I-5 to Medina: Bridge Replacement and HOV Project in the City of Seattle, King County, Washington. It was constructed in 1921 in the eastern portion of the Wallingford neighborhood, and now stands immediately west of I-5. The residence has poor integrity, due to the installation of non-original vinyl siding and the removal and replacement of many of its windows. Because of these alterations, it no longer has the ability to convey historical significance. Its setting has also been impacted by the construction of I-5 directly east of this residence. It is not located in a cohesive neighborhood and does not appear to embody characteristics or a method of construction that would warrant special recognition. Based on our evaluation, the property appears ineligible for listing in the NRHP individually or as a contributing element to a historic district.

Description of Physical Appearance: The property contains a two-story single-family residence with a rectangular plan and platform frame wood construction. The residence was originally designed in the Dutch Colonial Revival style. The primary façade is asymmetrically divided and four bays wide. It has a medium pitch gambrel roof with composition asphalt shingles. The exterior walls are clad with non-original vinyl siding. The fenestration primarily consists of non-original vinyl windows throughout the residence. An attached garage is arranged in the basement level below the residence.

**Property appears to meet criteria for the National Register of Historic Places:** Yes

**Property is located in a potential historic district (National and/or local):** No

**Property potentially contributes to a historic district (National and/or local):** No

**Statement of Significance:**

The property was evaluated at a reconnaissance level in a cultural resources survey completed for the SR520 I-5 to Medina: Bridge Replacement and HOV Project in the City of Seattle, King County, Washington. It was constructed in 1919 in the eastern portion of the Wallingford neighborhood, and now stands immediately west of I-5. The residence has good integrity and is an excellent example of the Craftsman style. It embodies the distinctive characteristics of this style and could be the design of a master architect. Based on our evaluation, the property appears individually eligible for listing in the NRHP under Criterion for its architectural design.

**Description of Physical Appearance:**

The property contains a one and a half-story single-family residence with a rectangular plan and platform frame construction. The residence was originally designed in the Craftsman style. The primary façade is symmetrically divided and three bays wide. It has a medium pitch side-gable roof with composition asphalt shingles and gable roof dormer. The exterior walls are clad with wood shingles with imbrication. The fenestration consists of original wood windows and non-original vinyl windows throughout the residence.

**Statement of Significance:**

The property was evaluated at a reconnaissance level in a cultural resources survey completed for the SR520 I-5 to Medina: Bridge Replacement and HOV Project in the City of Seattle, King County, Washington. It was constructed in 1919 in the eastern portion of the Wallingford neighborhood, and now stands immediately west of I-5. The residence has poor integrity, due to the construction of a two-story addition onto the front elevation, installation of non-original aluminum siding and several window alterations. Because of these alterations, it no longer has the ability to convey historical significance. Its setting has also been impacted by the construction of I-5 to the east. It is not located in a cohesive neighborhood and does not appear to embody characteristics or a method of construction that would warrant special recognition. Based on our evaluation, the property appears ineligible for listing in the NRHP individually or as a contributing element to a historic district.

**Description of Physical Appearance:**

The property contains a two-story multi-family residence with a rectangular plan and platform frame wood construction. The residence was originally designed in the American Foursquare style with elements of the Craftsman style. The primary façade is symmetrically divided and three bays wide. It has a medium pitch cross-gable roof with composition asphalt shingles and slightly overhanging eaves. The exterior walls are clad with non-original aluminum siding. The fenestration consists of both original wood and non-original vinyl windows throughout the residence.
